November 23, 2005

RE: Telematics Wireless Ltd.

FCC ID: NTAXMETER30

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) The plot of concern on page 40 was for the middle channel (see 7.3.26). The newly provided data appears for the low channel. Please review.
- 2) Data on page 25 still appears to show average measurements with additional correction factor adjustment. In order for average measurements to be valid, these measurements would need to be performed with ≥ 1 kHz VBW. It is uncertain if this was used. Please clarify the RBW and VBW setting used for both peak and average measurements on this page. Note that if ≥ 1 kHz VBW was not used, simple correction of the duty cycle will likely be sufficient. Please review/correct as necessary.

Timothy R. Johnson
Examining Engineer
