

RF Exposure Requirements

Product Description: Tour Guide System

Model No.: WT-300T

FCC ID: NTMWT300T

According to the KDB 447498 D01 v06 section 4.3.1, for 100 MHz to 6 GHz and test separation distances ≤ 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

Calculation Result:

Tx frequency range: 514-544 MHz

Min. test separation distance: 1.5 mm

Maximum Conducted Output Power: 7.76 dBm

RF channel transmit frequency: 543.95 MHz

Result: 2.94

Limit: 3.0

The exclusion thresholds is $2.94 < 3$, so the transmitter complies with the RF exposure requirements and the SAR is not required.
