

Description of Circuit Function

FCC ID : PS-300R

DATE : MAY 31, 2001

MODEL : YPS-300M

The monitor is displayed by Numbers through LED lamp and output the beeper sounding.

The input signal through the antenna is delivered to the IC U2 the data only composed by 24 bit via Q1-A, Q2-A and JC1-A.

The data in U2 is displayed by numbers and sounding after delivering the display unit composed by IC U3 and FNd DSP1 and beeper output circuit composed by transistor Q1 by calculating in the program.

The IC U4 is normal voltage use and the IC U1 is data storing use.
