

2. Photograph of the test configuration

3. Sample Calculation

The emission level measured in decibels above one microvolt (dB μ) was converted into microvolt per meter (μ /m) as shown in following sample calculation.

For example :

Measured Value at	<u>315.9 MHz</u>	17.7 dB
+ Antenna Factor		14.0 dB/m
+ Cable Loss		3.3 dB
- Preamplifier	0.0 dB	
- Distance Correction Factor *	0.0 dB	
<hr/>		
= Radiated Emission		35.0 dB / m
	$(= 56.2 \mu \text{m})$	

* Extrapolated from the measured distance to the specified distance by an inverse linear distance extrapolation.
