

DESCRIPTION OF THE RADIO CONTROL HARDBALL PITCHING MACHINE

The Radio Control Hardball Pitching Machine – Tx is used to trigger a pitching machine to pitch when directed. The EUT operates at a transmit frequency of 315 MHz. The transmitter will be located inside a plastic housing with a Velcro strap for attaching to the player's wrist. This device is part of the Power Pro Pitch Hardball Radio Control Pitching Machine. This system also includes a 315 MHz receiver located at the center of the pitching machine.
