MEASUREMENT REPORT of 2.4G Wireless LAN Mini-PCI Card

| Applicant | : | TOKO INC. |
|------------|---|-------------------------|
| EUT | : | 2.4G WLAN Mini-PCI Card |
| Model No. | : | TMW1052 |
| FCC ID | : | NUSTMW1052 |
| Report No. | : | T6815631 |

Tested by :

Training Research Co., Ltd.

TEL: 886-2-26935155FAX: 886-2-26934440No. 255, Nanyang Street, Shijr, Taipei Hsien 221, Taiwan, R.O.C.

CERTIFICATION

We here by verify that:

The test data, data evaluation, test procedures and equipment configurations shown in this report were made mainly in accordance with the procedures given in ANSI C63.4 (1992) as a reference. All test were conducted by *Training Research Co., Ltd.*, 255 Nanyang Street, Shijr, Taipei Hsien 221, Taiwan, R.O.C. Also, we attest to the accuracy of each.

We further submit that the energy emitted by the sample EUT tested as described in the report is <u>in compliance with</u> the technical requirements set forth in the FCC Rules **Part 15 Subpart C Section 15.247**.

I. GENERAL

1.1 Introduction

The following measurement report is submitted on behalf of applicant in support that the certification in accordance with Part 2 Subpart J and Part 15 Subpart A, and C of the Commission's Rules and Regulations.

1.2 Description of EUT

| Product Name | : | 2.4G Wireless LAN Mini-PCI Card |
|------------------|---|-------------------------------------|
| Model No. | : | TMW1052 |
| Granted FCC ID | : | NUSTMW1052 |
| Frequency Range | : | 2.412GHz ~ 2.462GHz |
| Support Channel | : | 11 Channel |
| Modulation Skill | : | DBPSK, DQPSK, CCK |
| Power Type | : | Powered by the Mini-PCI of Notebook |

1.3 Test method

- 1. Insert the EUT into the mini-PCI interface of the notebook computer
- 2. Using the notebook computer and software provided by the manufacturer to control EUT. The software is operated under the Windows to control the EUT in the continuous transmission mode.
- 3. Set different channel being tested and repeat the procedures above.
 - (a) Radiated for intentional test:Making EUT to the mode of continuous transmission
 - (b) Conducted for unintentional test: Making EUT to the linking (Rx/Tx) mode with far support equipments

| Test Report | | 6/36 |
|-------------|--|------|
|-------------|--|------|

1.4 Description of Support Equipment

In order to construct the minimum testing, following equipment were used as the support units.

| Notebook | : | DELL |
|-------------|---|------------------------------------------------------------------|
| Model No. | : | PP01L |
| Serial No. | : | DS/N CN-04E641-48155-22Q-0901 |
| FCC ID | : | N/A, DoC Approved |
| IC Class | : | B ICES-003 |
| Adaptor | : | DELL |
| Model No. | : | AA20031 |
| Serial No. | : | DS/N CN-09364U-16291-23G-00A4 |
| FCC ID | : | N/A, DoC Approved |
| 檢磁 | : | 3882A522 |
| Power type | : | I/P: 100 ~ 240vac, 50/60 Hz,130-170VA; O/P: 20Vdc, 3.5A |
| Power cable | : | Non-shielded, 1.8m length, Plastic hood, No ferrite core |
| | | (Between AC power source and power adaptor) |
| Power cable | : | Shielded, 1.82m length, Plastic hood, with ferrite core |
| | | (Between power adaptor and notebook) |
| Fax/Modem | : | Aceex |
| Model No. | : | DM-1414 |
| Serial No. | : | 9010582 |
| FCC ID | : | IFAXDM1414 |
| Power type | : | 110 VAC / 50 ~ 60 Hz, Switching |
| Power Cord | : | Non-shielded, 1.90m long, Plastic hoods, and no ferrite bead |
| Data Cable | : | RS-232 \rightarrow Shielded, 1.30m long, Metal hoods , No bead |
| | | RJ-11Cx2→Non-shielded, 7' long, Plastic hoods, No bead |

| Test Report | | 7/36 |
|-------------|--|------|
|-------------|--|------|

| Printer | : | НР |
|-------------|---|-----------------------------------------------------|
| Model No. | : | C6464A |
| Serial No. | : | TH16LEB5PK |
| FCC ID | : | N/A, DoC Approved |
| 檢磁 | : | 3892H381 |
| Power type | : | Switching adaptor |
| Power cord | : | Non-shielded, 173cm long, No ferrite core |
| | | (between adaptor and AC source) |
| | | Non-shielded, 180cm long, with ferrite core |
| | | (between printer and adaptor) |
| Data cable | : | Shielded, 1.70m long, No ferrite core |
| | | |
| Mouse | : | Logitech |
| Model No. | : | M-BA47 |
| Serial No. | : | LZE92250027 |
| FCC ID | : | DoC Approved |
| 檢磁 | : | 4872A220 |
| Power type | : | Powered by Computer |
| Power Cable | : | Shielded, 1.5m long, Plastic hoods, No ferrite bead |

USB

| Gamepad | : | Rockfire |
|------------|---|--------------------------------------------------|
| Model No. | : | QF-337uv |
| Serial No. | : | 10600545, KR91379759 |
| FCC ID | : | None (CE approval) |
| 檢磁 | : | 3862A574 |
| Power type | : | By computer |
| Data Cable | : | Shielded, 1.81m long, Plastic, with ferrite core |

Configuration of System Under Test 1.5

Connections of Computer:

*Parallel Port --- a printer *Serial Port --- an external modem *USB Port --- a USB gamepad *PS/2 Port --- a PS/2 mouse *Mini-PCI interface --- EUT

(Radiated of intentional)

The tests below are carried out the EUT transmitter set at high power in TDD mode. The EUT is needed to force selection of output power level and channel number.

The setting up procedure was recorded in <1.3> test method.

| Test Report | | 10/36 |
|-------------|--|-------|
|-------------|--|-------|

| Channel | Frequency (GHz) |
|---------|-----------------|
| 1 | 2.412 |
| 2 | 2.417 |
| 3 | 2.422 |
| 4 | 2.427 |
| 5 | 2.432 |
| 6 | 2.437 |
| 7 | 2.442 |
| 8 | 2.447 |
| 9 | 2.452 |
| 10 | 2.457 |
| 11 | 2.462 |

1.6 Verify the Frequency and Channel

Note:

- 1. This is for confirming that all frequencies are in 2.412GHz to 2.462GHz.
- 2. Section 15.31(m): Measurements on intentional radiators or receivers shall be performed at three frequencies for operating frequency range over 10 MHz. (The locations of these frequencies one near the top, one near the middle and one near the bottom.)
- After test, the EUT operating frequencies are in 2.412GHz to 2.462GHz. So all the items as followed in testing report are need to test these three frequencies: Top: Channel – 1; Middle: Channel – 6; Bottom: Channel – 11.

| Test Report | | 11/36 |
|-------------|--|-------|
|-------------|--|-------|

1.7 Test Procedure

All measurements contained in this report were performed mainly according to the techniques described in ANSI C63.4 (1992) and the pre-setup was written on <1.3 test method>, the detail setup was written on each test item.

1.8 Location of the Test Site

The radiated emissions measurements required by the rules were performed on the **three-meter**, **Anechoic Chamber (Registration Number: 93906)** maintained by *Training Research Co., Ltd.* 1F, No. 255 Nanyang Street, Shijr, Taipei Hsien 221, Taiwan, R.O.C. Complete description and measurement data have been placed on file with the commission. The conducted power line emissions tests and other test items were performed in an anechoic chamber also located at Training Research Co., Ltd.

No. 255 Nanyang Street, Shijr, Taipei Hsien 221, Taiwan, R.O.C. *Training Research Co., Ltd.* is listed by the FCC as a facility available to do measurement work for others on a contract basis.

1.9 General Test Condition

The conditions under which the EUT operates were varied to determine their effect on the equipment's emission characteristics. The final configuration of the test system and the mode of operation used during these tests were chosen as that which produced the highest emission levels. However, only those conditions, which the EUT was considered likely to encounter in normal use were investigated.

In test, they were set in high power and continuously transmitting mode that controlled by computer. The ch01, ch06 and ch11 of EUT were all tested. The setting up procedure is recorded on <1.3 test method>.

| Test Report | | 12/36 |
|-------------|--|-------|
|-------------|--|-------|

II. Section 15.203: Antenna requirement

The EUT is equipped with an integral antenna, it is permanently installed inside the notebook case. The antenna cannot be removed or modified without any tools from outside in order to prevent the un-authorized modification. This makes that complies with the antenna requirement stated in Sect.15.203.

The antenna specification list as below:

| Manufacturer | : | TOKO INC. |
|---------------|---|-------------------------------|
| Model No. | : | C510 |
| Connector | : | U. FL-LP-066 |
| Antenna Type | : | ¹ ڐ Dipole Antenna |
| Antenna Gain | : | 2.14dBi (Max.) |
| Coaxial Cable | : | A12B0733 |

| Test Report | | 13/36 |
|-------------|--|-------|
|-------------|--|-------|

III. Section 15.207: Power Line Conducted Emissions for AC Powered Units

3.1 Test Condition & Setup

The power line conducted emission measurements were performed in an anechoic chamber. The EUT was assembled on a wooden table, which is 80 centimeters high, was placed 40 centimeters from the backwall and at least 1 meter from the sidewall.

Power was fed to the EUT from the public utility power grid through a line filter and Line Impedance Stabilization Networks (LISNs). The LISN housing, measuring instrumentation case, ground plane, etc., were electrically bonded together at the same RF potential. The Spectrum analyzer (or EMI receiver) was connected to the AC line through an isolation transformer. The 50-ohm output of the LISN was connected to the spectrum analyzer directly. Conducted emission levels were in the CISPER quasi-peak detection mode. The analyzer's 6 dB bandwidth was set to 9 KHz. No post-detector video filter was used.

The spectrum was scanned from 150 KHz to 30 MHz. The physical arrangement of the test system and associated cabling was varied (within the scope of arrangements likely to be encountered in actual use) to determine the effect on the unit's emanations in amplitude and frequency. All spurious emission frequencies were observed. The highest emission amplitudes relative to the appropriate limit were measured and have been recorded in paragraph 2.4.

There is a test condition applies in this test item, the test procedure description as 1.3 test method, Three channels were tested, one in the top (CH01), one in the middle (CH06) and the other in bottom (CH11).

| | | | | Calibration Date | |

IV. Section 15.247 (a): Technical description of the EUT

Based on the Section 2.1, *Direct Sequence System* is a spread spectrum system in which the carrier has been modulated by a high speed spreading code and an information data stream. The high speed code sequence dominates the "modulating function" and is the direct cause of the wide spreading of the transmitted signal. In the Exhibit, operational description demonstrates the operation principles of the Baseband processor employed by the EUT, shows that which is a complete DSSS baseband processor and meets the definition of the direct sequence spread spectrum system.

V. Section 15.247(a)(2): Bandwidth for Direct Sequence System.

5.1 Test Condition & Setup

The transmitter bandwidth measurements were performed by the contact manner. The EUT was set to transmit continuously, also various channels were investigated to find the maximum occupied bandwidth.. The output of the EUT was connected to the spectrum analyzer. The bandwidth of the fundamental frequency is observed by the spectrum analyzer with 100kHz RBW and 100kHz VBW.

5.2 Test Instruments Configuration

Test Configuration of Bandwidth for Direct Sequence System

P.S.: Notebook computer to control the EUT at maximal power output and channel Number and set antenna kit

5.3 List of Test Instruments

| Instrument Name | Model No. | Brand | Serial No. | Last time | Next time |
|-------------------|-----------|---------|------------|-----------|-----------|
| Spectrum Analyzer | MS2665C | ANRITSU | 6200175476 | 09/11/02 | 09/11/03 |

|-------------|--|-------|

5.4 Test Result of Bandwidth

| Bandwidth of Channel 1 | | |
|---------------------------|---|-----------|
| Bandwidth | : | 11.36 MHz |
| The min. 6 dB BW at least | : | 500 KHz |

Bandwidth of Channel 6

| Bandwidth | : | 11.12 MHz |
|---------------------------|---|-----------|
| The min. 6 dB BW at least | : | 500 KHz |

Bandwidth of Channel 11

| Bandwidth | | 11.48 MHz |
|---------------------------|---|-----------|
| The min. 6 dB BW at least | : | 500 KHz |

Note:

- 1. The data in the above table are summarizing the following attachment spectrum analyzer hard copy. According to the guidance, we'd made the measurement with the spectrum analyzer's resolution bandwidth (RBW)=100kHz and set the span>>RBW. The results show the measured 6dB bandwidth comply with the minimum 500kHz requirement.
- 2. The attachments show these on the following pages.

VI. Section 15.247(b): Power Output

1.1 Test Condition & Setup

- 1. The output of the transmitter is connected to the BOONTON RF Power Meter.
- 2. The calibration is performed before every test. The values of the output power of the EUT will shown in the dBm directly are the transmitter output peak power. Recording as follows.

1.2 List of Test Instruments

| Instrument Name | Model No. | Brand | Serial No. |
|-----------------|-----------|---------|------------|
| RF Power Meter | 4532 | BOONTON | 117501 |

VII. Section 15.247 (C): Spurious Emissions (Radiated)

7.1 **Test Condition & Setup**

We'd performed the test by the radiated emission skill: The EUT was placed in an anechoic chamber, and set the EUT transmitting continuously and scanned at 3-meter distance to determine its emission characteristics. The physical arrangement of the EUT was varied (within the scope of arrangements likely to be encountered in actual use) to determine the effect on the unit's emanations in amplitude, directivity, and frequency. The exact system configuration, which produced the highest emissions were noted so it could be reproduced later during the final tests. For the measurement above 1GHz, according to the guidance we'd set the spectrum analyzer's 6dB bandwidth RBW to 1MHz.

This was done to ensure that the final measurements would demonstrate the worst-case interference potential of the EUT. Final radiation measurements were made on a three-meter, anechoic chamber. The EUT system was placed on a nonconductive turntable, which is 0.8 meters height, top surface 1.0 x 1.5 meter.

The spectrum was examined from 30 MHz to 1000 MHz using an Hewlett Packard 85460A EMI Receiver, M.E. whole range Bi-log antenna (Model No.: VULB9160) is used to measure frequency from 30 MHz to 1GHz. The final test is used the HP 85460A spectrum and 8564E spectrum was examined from 1GHz to 25GHz using an Hewlett Packard Spectrum Analyzer, EMCO/CMT Horn Antenna (Model 3115 / RA42-K-F-4B-C) for 1G to 25GHz.

At each frequency, the EUT was rotated 360 degrees, and the antenna was raised and lowered from one to four meters to find the maximum emission levels. Measurements were taken using both horizontal and vertical antenna polarization.

Appropriate preamplifiers were used for improving sensitivity and precautions were taken to avoid overloading or desensitizing the spectrum analyzer. There are two spectrum analyzers use on this testing, HP 85460A for frequency 30MHz to 1000MHz, and 8564E for frequency 1GHz to 25GHz. No post-detector video filters were used in the test. The spectrum analyzer's 6dB bandwidth was set to 120KHz (spectrum was examined from 30 MHz to 1000 MHz), the spectrum analyzer's 6dB bandwidth was set to 1 MHz (spectrum was examined from 1GHz to 25GHz) and the analyzer was operated in the maximum hold mode. There is a test condition applies in this test item, the test procedure description as the 1.3 test method:

Three channels were tested, one in the top (CH01), one in the middle (CH06) and the other in bottom (CH11).

| Test Report | | 25/36 |
|-------------|--|-------|
|-------------|--|-------|

With the transmitter operating from a AC source and using the internal of EUT, radiates spurious emissions falling within the restricted bands of 15.209 were measured at operating frequencies corresponding to upper, middle and bottom channels in the 2400 \sim 2483.5 MHz band.

The actual field intensity in decibels referenced to 1 microvolt per meter ($dB\mu V/m$) is determined by algebraically adding the measured reading in $dB\mu V$, the antenna factor (dB), and cable loss (dB) at the appropriate frequency. Since the EUT was set to transmit continuously, no *duty cycle* is present.

For frequency between 30MHz to 1000MHz

FIa $(dBuV/m) = FIr (dB\mu V) + Correction Factors$

FIa : Actual Field Intensity

FIr : Reading of the Field Intensity

Correction Factors = Antenna Factor + Cable Loss - Amplifier Gain

For frequency between 1 GHz to 25 GHz

FIa $(dB\mu V/m) = FIr (dB\mu V) + Correction Factor$

FIa : Actual Field Intensity

FIr : Reading of the Field Intensity

Correction Factors = Antenna Factor + Cable Loss - Amplifier Gain

7.4 Test Result of the Bandedge

If any 100 kHz bandwidth outside these frequency bands, the radio frequency power that is produced by the modulation products of the spreading sequence, the information sequence and the carrier frequency shall be either at least 20 dB below that in any 100 kHz bandwidth within the band that contains the highest level of the desired power or shall not exceed the general levels specified id § 15.209(a),

We perform this section by the radiated manner, the RBW is set to 100kHz and VBW>RBW. We'd made the observation up to 10th harmonics and the criterion is all the harmonic/spurious emissions must be 20dB below the highest emission level measured. If the emissions fall in the restricted bands stated in the Part 15.205(a) must also comply with the radiated emission limits specified in Part 15.209(a). (Peak mode: RBW=VBW=1MHz, Average mode: RBW=1MHz; VBW=10Hz)

The following pages show our observations referring to the channel 1 and 11 respectively.

| Spectrum Analyzer | MS2665C | ANRITSU | 6200175476 | 09/11/02 | 09/11/03 |

8.4 Test Result of Power spectral density

The following table shows a summary of the test results of the Power Spectral Density.

| Channel | Frequency (GHz) | Ppr (dBm) | Cable Loss (dB) | Ppq (dBm) | Limit (dB) | Margin (dB) |
|---------|--------------------|--------------|--------------------|--------------|---------------|----------------|
| CH 01 | 2.412 | -14.77 | 0.7 | -14.07 | 8.00 | -22.07 |
| CH 06 | 2.437 | -17.97 | 0.7 | -17.27 | 8.00 | -25.27 |
| CH 11 | 2.462 | -18.14 | 0.7 | -17.44 | 8.00 | -25.44 |

Note:

- 1. The attachment following by this page.
- 2. Ppr: spectrum read power density (using peak search mode),

Ppq: actual peak power density in the spread spectrum band.

3. Ppq = Ppr + |Cable Loss|
