TEST - REPORT

No. 51116-70522

for

Bedas 9320 logic

Applicant: Kaba Benzing GmbH

Purpose of testing: To show compliance with
FCC part 15 subpart C

—

Note:

The test data of this report relate only to the individual item which have been tested.
This report shall not be reproduced except in full without the written approval of the
testing laboratory.

—

Table of Contents

- 1) Administrative Data
- 2) Summary of Test Results
- 3) Data of Operation Mode and Configuration of EUT
- 4) Performed Tests and Results
- 5) Annotations to Performed Tests
- 6) Referenced Regulations
- 7) Test Equipment List
- 8) Photographs of Test Setup
- 9) Test Results
- 10) Measurement Uncertainty Values

1) Administrative Data

Equipment Under Test: Bedas 9320 logic

Options/Accessories: with transponder card

Serial Number: 0291

Version of EUT: as received

—
Applicant: Kaba Benzing GmbH
(Full Address) Albertstraße 3
78056 Villingen-Schwenningen

Contract Identification: ---

Contact Person: Mr. Maier

Manufacturer: Kaba Benzing GmbH

—
Receipt of EUT: 07/22/1997

Date of Test: 07/22/1997

Note: Mr. Maier was present during the tests.

—
Responsible for Testing: P. Zisterer

Responsible for Report: P. Zisterer (cj)

2) Summary

The tested sample fully complies with the requirements set forth in

FCC part 15 subpart C.

Johann Roidt
Technical Manager

Peter Zisterer
Test Engineer

3) Data of Operation Mode and Configuration of EUT

Operation Mode

- Reading of transponder
- EUT is connected with PC by the RS485/232-Converter
- Software "Service V 2.84" is running under DOS V 5.0

Configuration of cables of EUT

- Shielded power supply/data-cable (2 m)
- Shielded printer cable (2 m)
- Shielded monitor cable (1 m)
- Shielded data cable (RS485/232, 3 m)

Configuration of peripherals of EUT

- PC (NCR, 486 SX, 33 MHz)
- Keyboard (AT & T, PS/2)
- Mouse (Hewlett Packard, PS/2)
- Monitor (AT & T, 17")
- Parallel printer (Hewlett Packard, HP Think Jet)
- RS485/232-Converter (Kaba Benzing)

4) Performed Tests and Results

Test	Result	Note
FCC part 15 subpart C		
Conducted Emission 0.45 - 30 MHz	limit kept	
Radiated Emission 30 - 1000 MHz	limit kept	
Radiated Emission 0.009 - 30 MHz	limit kept	
Radiated Field Strength (30 m)	limit kept	
Frequency Tolerance	limit kept	

5) Annotations to Performed Tests

In general conducted emission tests in the frequency range 0.15 - 30 MHz are required to be performed with quasi-peak and average detector. To simplify testing the following procedure is used:

First the whole spectrum of emission caused by equipment under test (EUT) is recorded with detector set to peak. After that all emission levels having less margin than 20 dB to or exceeding the appropriate limit (in general average limit is 10 dB lower than quasi-peak limit) are retested with detector set to quasi-peak. If average limit is kept no additional scan with average detector is necessary. In cases of emission levels between quasi-peak and average limit an additional scan with detector set to average has to be recorded.

Radiated emission tests in the frequency range 30 - 1000 MHz are performed in two steps:

First a peak scan using an anechoic room with test distance of 3 m between measuring antenna and EUT is performed to get the whole spectrum of emission caused by EUT. During testing EUT is rotated all around and measuring antenna is raised and lowered from 1 to 4 m to find the maximum emission levels. In the test report this measurement is characterized as prescan. Limit lines are added to these prescan charts to check margin to appropriate limit. In cases of required test distances differing from 3 metres limit levels are converted to 3 metres using the theoretical conversion factors.

Finally emission levels having less margin than 6 dB to or exceeding the limit are retested using an open area test site with the required test distance and detector of the test receiver set to quasi-peak. Again EUT is rotated all around and measuring antenna is raised and lowered from 1 to 4 m to find the maximum emission levels.
