Re: Adjustment of the Model CSI-CPBRW-AWS Pilot Beacon in the Field

The CSI Model CPBRW-AWS Pilot Beacon offers only adjustment of output power (below its factory-set maximum level) to the technician during installation and maintenance activities. This adjustment is dependent on the physical environment in which the unit is to be installed and is described in the Installation and Users Manual. This is the only adjustment accessible without opening the amplifier. Frequency and power thresholds are factory set and in no circumstance are they to be adjusted in the field.

Sincerely,

Steven Maniglia
VP of Engineering
