Re: Adjustment of the Model CSI-DSP95-255-AW In-building Amplifier in the Field

The CSI Model DSP95-255-AW In-Building Amplifier offers only adjustment of gain (below its factory-set maximum gain level) to the technician during installation and maintenance activities. This adjustment is dependent on the physical environment in which the amplifier is to be installed and is described in the Installation and Users Manual. This is the only adjustment accessible without opening the amplifier. Frequency response and gain thresholds are factory set and in no circumstance are they to be adjusted in the field.

Sincerely,

Steven Maniglia
