- 1. Reference CFR 2.1093(b): For purposes of this section, a portable device is defined as a transmitting device designed to be used so that the radiating structure(s) of the device is/are within 20 centimeters of the body of the user.
- 2. Section 6.1.2 of this test report. Note that the value has been adjusted to include the cable insertion loss.
- 3. Data supplied by the client for combination of cable loss and antenna gain.
- 4. Power density is calculated from field strength measurement and antenna gain.
