#### 2. Test Result

#### 2.1. Isotropic Probe Test Setup

The measurement probe (EHP-200AC) is a regular hexahedron and supports 3-axis isotropic probe.

- A: Front of measurement probe
- B: Right of measurement probe
- C: Rear of measurement probe
- D: Left of measurement probe
- E: Top of measurement probe

- At 4 cm distance, measurement isotropic probe was investigated by rotating the probe through various angles for one of the EUT's sides as below.

Measurement Point	A	В	С	D	E
Direction	Front	Right	Rear	Left	Тор
Measurement Point	A to B	B to C	C to D	D to A	N/A
Direction	Front to Right	Right to Rear	Rear to Left	Left to Front	-
Measurement Point	A to E	B to E	C to E	D to E	N/A
Direction	Front to Top	Right to Top	Rear to Top	Left to Top	-

- When the worst angle among all angles was found, RF exposure measurement should be adjusted from worst angle.
- Worst Case

E-field: One of the several angles was found as  $\underline{\textbf{Side D}}$  of isotropic probe.

H-field: One of the several angles was found as **Side C** of isotropic probe.

<sup>\*</sup>Bottom of measurement probe is not used to measure RF exposure condition owing to connection with a stick.

### 2.2. EUT Test Setup

#### 2.3. Measurement procedure

- a) The RF exposure test was performed in anechoic chamber.
- b) The measurement probe was placed at test distance (4, 6, 8, 10, 15 cm) which is between the edge of the charger and the geometric center of probe.
- c) Measurement was performed on each side of the EUT as described above picture (A, B, C, D, E).
- d) The EUT was measured according to the dictates of KDB 680106 D01 RF Exposure Wireless Charging Apps v03.

#### Note;

- Because of measurement probe antenna size, minimum distance between charger and probe is 4 cm for E-Field and H-Field.
- Probe has 4 cm radius enclosure but each sensing element is located 8 mm from the other edge. Therefore, actual distance in measurement at 4 cm is 0.8 cm.
- The EUT installed to the vehicle was charged from the top, so it was measured from 5 sides except the bottom.
- According to the manufacturer's declaration, the minimum separation distance between the EUT(A, B, C and D sides) and the probe excluding the E side of the EUT was 8 mm, and thus the evaluation was carried out at 13 mm.

# 2.6. H-Field Strength Calculation of the EUT

#### 2.6.1. Calculation of $\mu_r$ (relative permeability)

According to the self-inductance formula,  $\mu_r$  (relative permeability) can be obtained.

$$\begin{split} x &= \sqrt{1 + \left(d/_{2l}\right)^2}, \\ L &= 2l \left[ ln \left\{ (^{2l}/_d)(1+x) \right\} - x + \frac{\mu_r}{_4} + \frac{d}{_{2l}} \right], \\ \mu_r &= 4 \left[ \frac{L}{_{2l}} - ln \left\{ \left( \frac{2l}{_d} \right)(1+x) \right\} + x - \frac{d}{_{2l}} \right] \end{split}$$

#### 2.6.2. Calculation of theoretical H-field strength with Biot-Savart's law

According to Biot-Savart law, the value of the B-field at the distance z from the coil is expressed as follows.

$$B_z = \frac{\mu_0 I R^2}{2(R^2 + z^2)^{3/2}}$$

Convert the value of the B-field to the H-field.

$$B_z = \mu_0 \times H_z,$$
 
$$H_z = \frac{IR^2}{2(R^2 + z^2)^{3/2}}$$

Considering the number of turns and relative permeability of coil, it is expressed as follows. 
$$H_z = \frac{IR^2}{2(R^2+z^2)^{3/2}} \times \frac{N}{\mu_r}$$

Where:

I: the maximum current to the EUT during charging can be obtained from the power supply equipment [A]

R: the radial of EUT' coil antenna [m]

z: the distance from the coil antenna to the point to be measured [m]

N: the number of turns in the coil

μ<sub>r</sub>: relative permeability

### 2.6.4. The estimation of H-field strength

Frequency		Distance	EUT Sides E	Limits [A/m]
(kHz)	Test Condition	(cm)	Theoretical H-field value [A/m]	
114 ~ 116	5 W (1 % battery status of client device)	Contact, 0	1.413	
126 ~ 128	7.5 W (1 % battery status of client device)	Contact, 0	1.413	1.63
114 ~ 116	15 W (1 % battery status of client device)	Contact, 0	1.413	

Estimation formula and theoretical value have 30% agreement with actual measurement. Estimation for 0mm field strength with validated formula complies limit.
