Wind Forces

The axial, side and twisting moment forces stated are maximum loads applied to the tower by the antenna at a survival wind speed of 250 km/h (70 m/s). They are, in every case, the result of wind from the most critical direction for each parameter. The individual maximums may not occur simultaneously. All forces are referenced to the antenna mounting pipe.

Axial Force (F_A), N	409 (372 on 42 - 80GHz)
Side Force (F_S), N	146 (135 on 42 - 80Ghz)
Twisting Moment (M_T), N•m	103/109

Radiation Pattern Envelope

Co-polar and Xp-polar response are represented for both horizontal and vertical polarizations. The curves are identified as follows:

HH – Response of horizontally polarized port to a horizontally polarized signal.

VV – Response of vertically polarized port to a vertically polarized signal.

XP – HV/VH

HV – Response of horizontally polarized port to a vertically polarized signal.

VH – Response of vertically polarized port to a horizontally polarized signal.
