Dear Sir

FCC ID:O2J-365AS Class II Permissive Change

Further to recent Grant of Equipment Authorisation, Airspan Communication would now like to extend the operation of the device to include the upper 25MHz portion of the 3650-3700 MHz band.

The ability to operate the unrestricted contention based protocol already resides within the hardware and the only changes required to implement it is the use of the correct version of Airspan's Netspan management software.

Regards

A handwritten signature in blue ink, appearing to read 'C Blackham', is shown on a light-colored rectangular background.
