Subject: Re: Occupied BW & Band Edge Measurements for O34-E790GPRS

Hi Dennis,

Since the radio Module is already FCC Certified as a modular transceiver, and there is no changes on this radio operation. We only need to conducted the RF Output Power and Transmitter Spurious Emissions to ensure the continuing compliance. All other tests are referred to the original test report of the module that was submitted with this application. All our past submissions to FCC were done these way. Please submit my answer to FCC and see what they said. If they still insist the occupied bandwidth and Band-edge emissions to be done, we will conduct the test and re-submitted to you ASAP.

Tri Luu, P.Eng.
