Device

Device Overview

When using your device for the first time, you should complete these tasks to set up the device and get to know the basic features.

Battery information

You can use alkaline, MiMH, or lithium batteries. Use NiMH or lithium batteries for the best result. The device operates on two AA batteries.

NOTICE

Alkaline batteries lose a significant amount of their capacity as temperature decreases. Therefore, use lithium batteries when operating the device in below-freezing conditions

- ⑥ Rear cover screw
- ⑦ Battery

Software

Start Qcool software, main contact interface presents.

Before going out for field operation, please follow below procedure step by step. In Qcool software, Field operation procedure is presented as below:

- ⌕ Select / Edit coordinate system
- ⌕ Open / New build a dictionary

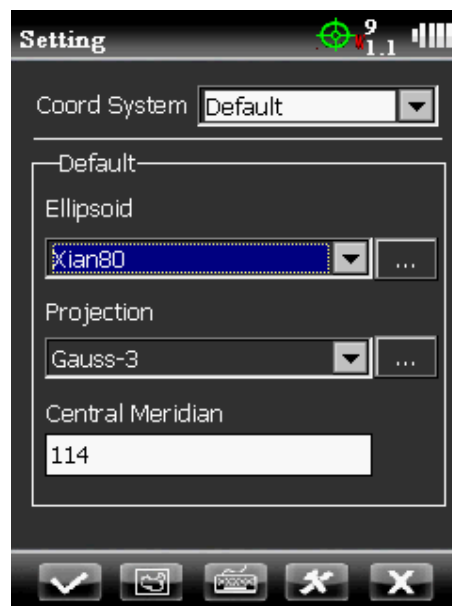

- Ø New build a project
- Ø Import background image
- Ø Collect Point / Line / Area
- Ø Data download

1. Select / Edit coordinate system

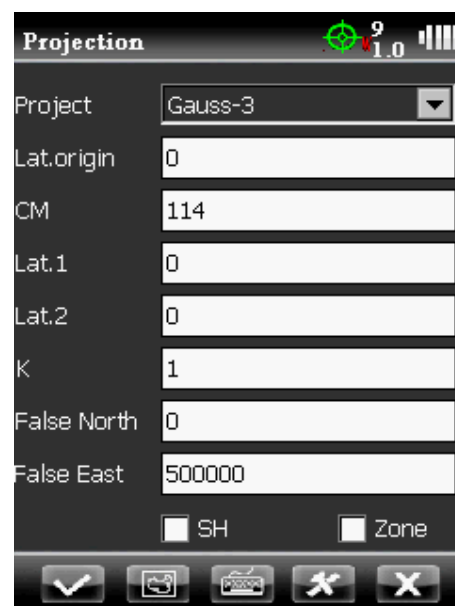

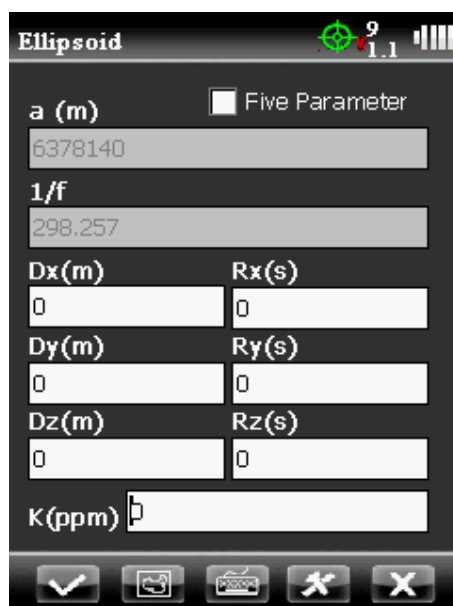

Before field operation, your own coordinate system is needed, by

clicking to select / edit coordinate system.

You can edit Ellipsoid, Projection, and Central Meridian.

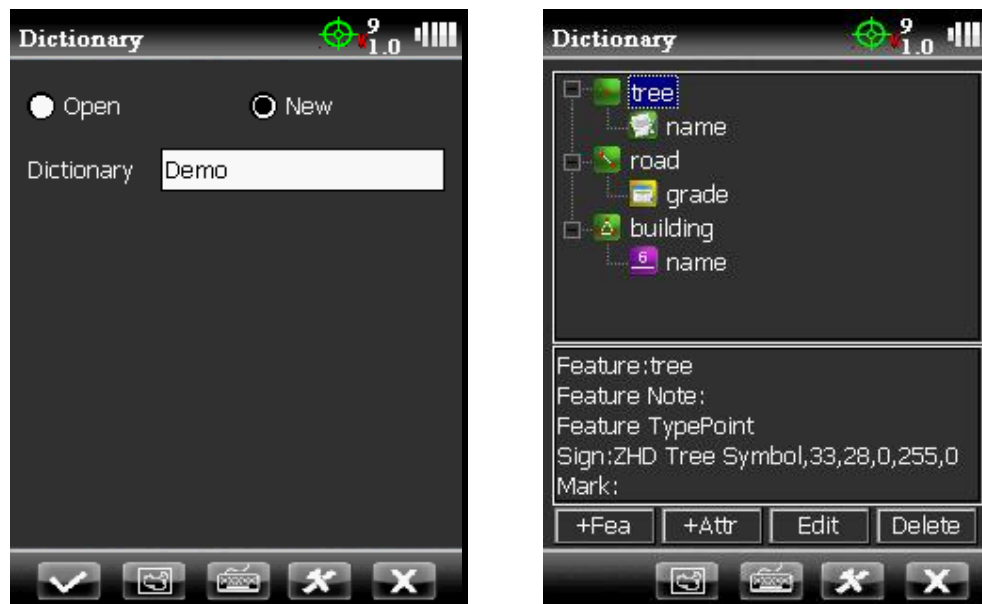

When finished, click  to confirm.

2. Open / New build a dictionary

Dictionary is used to record attribute. By clicking  you can new build dictionary or customize the attribute according to your field operation needs.

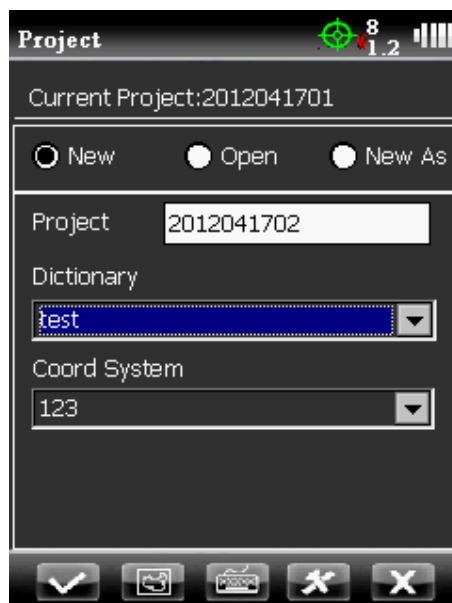

All the features are described by point, line or area. For example, trees should be recorded as point, roads should be recorded as line, and buildings should be recorded as area.

3. New build a project

When coordinate and dictionary are both ready, you can start you project now.

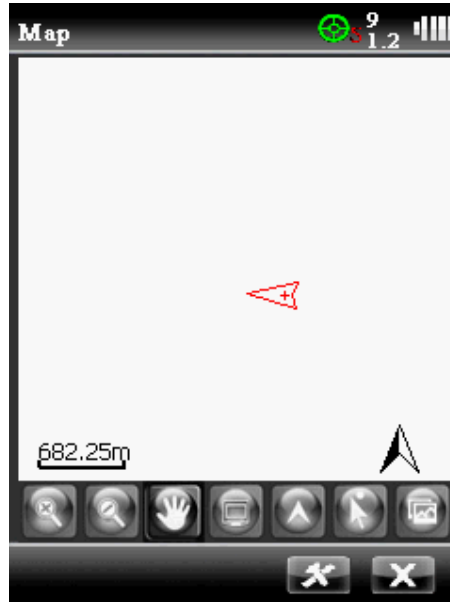

Remember to click  to confirm.

4. Import background image

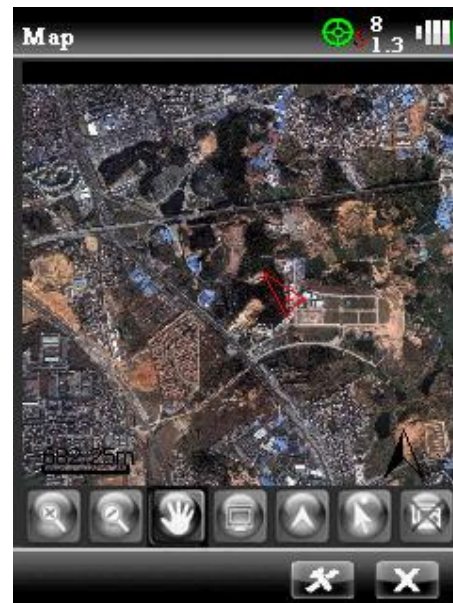

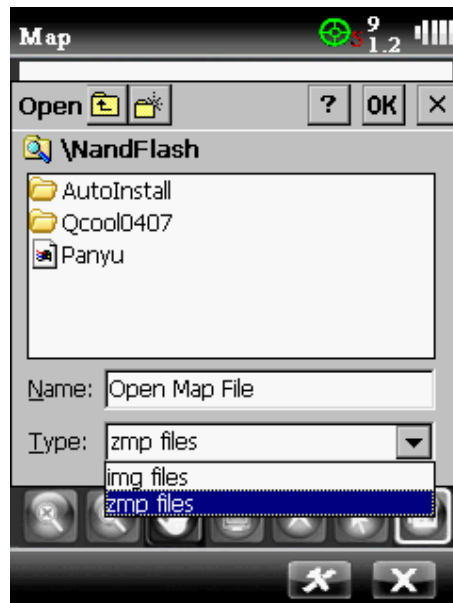

Map or background image can be imported into program to get more artistic interface.

Click  to enter map interface.

Click  to add your map.

There are two type of format for map, *.zmp file can be created by Hi-Target Hi-Net Server software.

Every signal point on *.zmp map has a coordinate, with this map, Qcool will show where you are and what the area is.

5. Collect Point / Line / Area

Main function of Qcool is to record the objects with coordinates and attributes.
Notice: when recording, first record coordinate, then attribute.

Collect Point

Click  to enter "Collect Point" interface. Here you can see your current position with coordinate.

First click  to record coordinate, then click  to record attribute.

When recording coordinate, you can manually click  or automatically recording by distance or time.

For attributes, you can click  for every single point or after recording several coordinates then click  to write the same attribute to those points.

After writing attributes, click  to confirm.

Collect Line

Click  to enter “Collect Line” interface. Here shows your current position with coordinate.

At least two points will make a line, which means you should first record at least two points with coordinate, then click  to write attribute.

Also when recording coordinate, you can manually or automatically operate.

After writing attributes, click  to confirm.

Collect Area

Click  to enter “Collect Area” interface. Here shows your current position with coordinate.

At least three points will make area, which means you should first record at least three points with coordinate, then click  to write attribute.

Tips: Save your data by clicking .

6. Data download

In order to connect to your PC, Microsoft ActiveSync is need on Windows XP; Windows Mobile Device Center is need on Windows 7 operating system. After software been installed, next step is to install driver.

All your data should be stored in NandFlash, Otherwise it will not be stored after you restart the device.

When finished field operation, data can be downloaded to PC for post-processing. Hi-Target Hi-Net Server software is the post-processing software which can process field data and export different format data (DXF, SHP, MIF, CSV, txt).
