Hi Mike :

Reply to Question #1: We have discussed the output power issue. The spec. output power for this device shall be 50mW. The output power reported in EMC test report are not correct. The output power has been remeasured with peak power meter. The highest output power measured is 16.78dBm.

Attached please revised peak output power data.

Reply to Question #2: Confirmed with the applicant. There will not body worn accessory provided by the applicant. Regulatory information has been revised. Attached please find revised regulatory information sheet.

Reply to Question #3: AC line conducted emission tests have been measured with CISPR 22 limits from 150kHz to 30MHz. Attached please find additional AC line conducted data.

Best Regards

Steve cheng

Notice\_content

-----

Question #1: The output power listed in the EMC test report with highest output power of 14.09dBm. The highest output power reported in the SAR report is 16.81dBm. Please explain the differences.

Question #2: The user manual mentioned body worn accessory. Please provide the photos of body worn accessory.

Question #3: The AC line conducted emission was measured from 450k-30MHz. Per FCC Docket 98-80, the AC line conducted emission shall be measured from 150k-30MHz based upon CISPR 22 technical limits in order to avoid the following grant note:

05" NOTE- The manufacture and importation of this device must cease on July 10, 2005 pursuant to 15.37(j) or 18.123 transition provisions adopted under FCC 02-157 (ET Docket 98-80).

Best Regards

Mike Kuo
