

2. Photograph of the test configuration

3. Sample Calculation

The emission level measured in decibels above one microvolt (dB<sub>μV</sub>) was converted into microvolt per meter (μV/m) as shown in following sample calculation.

For example :

	Measured Value at	<u>447.69 MHz</u>	57.0 dB
+	Antenna Factor		16.3 dB/m
+	Cable Loss		3.9 dB
-	Preamplifier		0.0 dB
-	Distance Correction Factor *		0.0 dB
<hr/>			
=	Radiated Emission		77.2 dB <sub>μV/m</sub>
			( = 7244.4 μV/m )

\* Extrapolated from the measured distance to the specified distance by an inverse linear distance extrapolation.
