Model No.: HAC1.2

## Radiofrequency radiation exposure evaluation

According to KDB 447498 D01v06 section 4.3.1, For frequencies between 100 MHz to 6GHz and test separation distances ≤ 50 mm, the Numeric threshold is determined as:

## Step a)

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]  $\cdot [\sqrt{f(GHz)}] \le 3.0$  for 1-g SAR

>> The fundamental frequency of the EUT is 2402-2480MHz, the test separation distance is ≤ 50mm.

(Manufacturer specified the separation distance is: 20mm)

## Step a)

- >> Numeric threshold (2402MHz), mW / 20mm \*  $\sqrt{2.402}$ GHz  $\leq 3.0$  Numeric threshold (2402MHz)  $\leq 38.713$ mW
- >> Numeric threshold (2440MHz), mW / 20mm \*  $\sqrt{2.440}$ GHz  $\leq 3.0$  Numeric threshold (2440MHz)  $\leq 38.411$ mW
- >> Numeric threshold (2480MHz), mW / 20mm \*  $\sqrt{2.480}$ GHz  $\leq 3.0$  Numeric threshold (2480MHz)  $\leq 38.100$ mW
- >> The power of EUT measured (2402MHz) is: -0.5dBm = 0.891mW The power of EUT measured (2440MHz) is: -0.6dBm = 0.871mW The power of EUT measured (2480MHz) is: -1.03dBm = 0.789mW

Which is smaller than the Numeric threshold.

Therefore, the device is exempt from stand-alone SAR test requirements.
