Model No.: HRMBLEM

Radiofrequency radiation exposure evaluation

According to KDB 447498 D01v06 section 4.3.1,

>> The 1-g SAR test exclusion thresholds, for 100MHz to 6GHz, at test separation distances ≤ 50 mm are determined by:

Power at 2.402GHz = 0.0749 mW EIRP Power at 2.440GHz = 0.0736 mW EIRP Power at 2.480GHz = 0.0741 mW EIRP

 $[(0.0749 \text{ mW}) / (5 \text{ mm})] \cdot [\text{sqrt} (2.402 \text{ GHz})] = 0.02321 \text{ which is} \leq 3.0 \text{ for 1-g SAR.} \\ [(0.0736 \text{ mW}) / (5 \text{ mm})] \cdot [\text{sqrt} (2.440 \text{ GHz})] = 0.02299 \text{ which is} \leq 3.0 \text{ for 1-g SAR.} \\ [(0.0741 \text{ mW}) / (5 \text{ mm})] \cdot [\text{sqrt} (2.480 \text{ GHz})] = 0.02333 \text{ which is} \leq 3.0 \text{ for 1-g SAR.}$

Therefore the device is exempt from stand-alone SAR test requirements.

- >> The fundamental frequency of the EUT is 2402MHz-2480MHz, the test separation distance is < 50mm. (Manufacturer specified the separation distance is: less than 5mm)
- >> The power of EUT measured is:
 - For 2402MHz: 0.0749mW = 10 log (0.0749) dBm ~ -11.25dBm
 - For 2440MHz: 0.0736mW = 10 log (0.0736) dBm ~ -11.33dBm
 - For 2480MHz: $0.0741mW = 10 log (0.0741) dBm \sim -11.30dBm$
