EMC Test

for

ELPAS - Electro-optic Systems Ltd.

Equipment under test:

Alert IR/RF 433 Tag

ALB00001

Approved by: _____
Y. Mordukhovitch, Test Engineer

Approved by: _____
I. Raz, EMC Laboratory Manager

This report must not be reproduced, except in full, without the written permission of I.T.L. (Product Testing) Ltd.

This report relates only to items tested.

Measurement/Technical Report for ELPAS - Electro-optic Systems Ltd.

Equipment under test:

Alert IR/RF 433 Tag

FCC ID: O4XB05

DATE: 16 July 2000

This report concerns: Original Grant Class II change

Class B verification Class A verification Class I change

Equipment type: Radio Telemetry Transmitter

Request Issue of Grant:

Immediately upon completion of review

Limits used:

CISPR 22 Part 15

Measurement procedure used is ANSI C63.4-1992.

Application for Certification

1. General Information

1.1 *Product Description*

Alert IR/RF Tag - P/N ALB00001

Users

The Alert IR/RF tag is designed for panic applications, where the user needs immediate help.

Typical users are: tenants of old-age homes, staff in psychiatric wards, etc.

Attachment

The Alert IR/RF tag is a key-ring device worn either attached to clothes or hung on a string or chain around the neck.

IR Transmission

Infra-red signals are transmitted from the sides and lower section of the badge. This configuration improves the 'visibility' of the badge to the RDR.

Operation

In general, the badge performance is similar to that of the other IR/RF badges. The button on the badge is large and easy to press.

1.2 Test Methodology

Both conducted and radiated testing were performed according to the procedures in ANSI C63.4:1992. Radiated testing was performed at an antenna to EUT distance of 3 meters.

1.3 Test Facility

The open area test site and conducted measurement facility used to collect the data is located at Kfar Bin Nun, Israel. This site has been fully described in reports dated April 10, 1995 and May 8, 1995, submitted to the FCC office, and accepted in a letter dated July 23, 1998 (31040/SIT 1300F2).

1.4 Measurement Uncertainty

Radiated Emission

The Open Site complies with the ± 4 dB Normalized Site Attenuation requirements of ANSI C63.4-1992. In accordance with Paragraph 5.4.6.2 of this standard, this tolerance includes instrumentation calibration errors, measurement technique errors, and errors due to site anomalies.

2. Product Labeling

Figure 1. FCC Label

Figure 2. Location of Label on EUT

3. System Test Configuration

3.1 *Justification*

The E.U.T was configured for testing in a typical fashion. In this typical mode of operation, the E.U.T. transmits an ID message of 4 bytes (one start bit, 8bits data, none parity, one stop bit per byte) every in sec. at 19200 BPS on OOK (On/Off Keying) modulation.

3.2 *EUT Exercise Software*

The software version (Ver. Tst 1) that was used for the emission test is auto starting on battery installation and transmitting continuously non stop random data on OOK modulation at 19200 BPS rate. This mode of operation enables better detection of the emission.

3.3 *Special Accessories*

No special accessories were needed to achieve compliance.

3.4 *Equipment Modifications*

No special modifications were needed to achieve compliance.

3.5 *Configuration of Tested System*

The configuration of the tested system is described below.

Figure 3. Configuration of Tested System

4. Block Diagram

4.1 Schematic Block/Connection Diagram

Figure 4. Block Diagram

5. Radiated Emission Data

5.1 Radiated Emission 10KHz-1000 MHz, Below 1GHz

The E.U.T. operation mode and test set-up are as described in Section 3.

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The effect of varying the position of the cables was investigated to find the configuration that produces maximum emission. The configuration tested is shown in Figure 3.1.

The frequency range 10KHz-1000 MHz was scanned, and the list of the highest emissions was verified and updated accordingly.

The emissions were measured using a computerized EMI receiver complying to CISPR 16 requirements. The specification limits and applicable correction factors are loaded to the receiver via a 3.5" floppy disk.

The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

Verification of the E.U.T emissions was based on the following methods:

- Turning the E.U.T on and off.

- Using a frequency span less than 10 MHz.

- Observation of the signal level during turntable rotation. Background noise is not affected by the rotation of the E.U.T.

During this test the E.U.T. was operated in continuous transmission to enable better detection of signals.

A correction factor of $20 \log 100(\text{ms})/2(\text{msec})^* = 34\text{dB}$ was applied for the fundamental, harmonics, and applicable spurious signals.

*Note: Actual E.U.T. transmission on time is 2msec.

5.2 *Measured Data*

JUDGEMENT: Passed by 26.6 dB μ V/m

The EUT met the requirements of the F.C.C. Part 15, Subpart C, Class B specification.

The worst case was 26.6dB μ V/m for 73.48 MHz, vertical polarization.

The details of the highest emissions are given in Figure 5 to Figure 6.

5.4 **Field Strength Calculation**

In the frequency range below 2.9GHz the field strength is calculated directly by the EMI Receiver software, and a "Correction Factors" data disk, using the following equation:

$$[\text{dB}\mu\text{v/m}] \text{ FS} = \text{RA} + \text{AF} + \text{CF} + \text{DCF}^*$$

- FS: Field Strength [dB μ v/m]
- RA: Receiver Amplitude [dB μ v]
- AF: Receiving Antenna Correction Factor [dB/m]
- CF: Cable Attenuation Factor [dB]
- DCF: Duty Cycle Factor (dB) DCF = 20log 100/2=-34dB

*Note: applicable for Fundamental and Harmonics

No external pre-amplifiers are used.

In the frequency range above 2.9GHz, the field strength is manually calculated using the following equation

$$[\text{dB}\mu\text{v/m}] \text{ FS} = \text{RA} + \text{AF} + \text{CF} + \text{PRAF} + \text{DCF}$$

PRAF: Preamplifier Gain Factor

6. Radiated Emission Data

6.1 Radiated Emission Above 1 GHz

The E.U.T operation mode and test set-up are as described in Section 3.

A preliminary measurement to characterise the E.U.T was performed inside the shielded room, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The effect of varying the position of the cables was investigated to find the configuration that produces maximum emission. The configuration tested is shown in Figure 3.1.

In the frequency range 1-2.9 GHz, a computerized EMI receiver complying to CISPR 16 requirements was used. The test distance was 3 meters.

In the frequency range 2.9-4.4 GHz, a spectrum analyzer including a low noise amplifier was used. The test distance was 3 meters. During peak measurements, the I.F. bandwidth was 1 MHz, and video bandwidth 3 MHz.

The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

Verification of the E.U.T emissions was based on the following methods: turning the E.U.T on and off; using a frequency span less than 10 MHz; observation of the signal level during turntable rotation. (Background noise is not affected by the rotation of the E.U.T.)

A correction factor of $20 \log 100(\text{msec})/2(\text{msec})^* = -34\text{dB}$ was applied for the fundamental, harmonics, and applicable spurious signals for the average detection only.

*NOTE : Actual E.U.T. transmission on time is 2msec.

6.2 Test Data

JUDGEMENT: Passed by 3.3 dB μ V/m

The EUT met the requirements of the specification. The worst case was:
8.2 dB μ V/m for 1749.27 MHz, horizontal polarization

The details of the highest emissions are given in Figure 7 to Figure 8.

Radiated Emission Above 1 GHz

E.U.T Description Alert IR/RF 433 Tag
 Type **ALB00001**

6.4 **Field Strength Calculation**

In the frequency range below 2.9GHz the field strength is calculated directly by the EMI Receiver software, and a "Correction Factors" data disk, using the following equation:

$$[\text{dB}\mu\text{v}/\text{m}] \text{ FS} = \text{RA} + \text{AF} + \text{CF} + \text{DCF}^*$$

- FS: Field Strength [dBμv/m]
- RA: Receiver Amplitude [dBμv]
- AF: Receiving Antenna Correction Factor [dB/m]
- CF: Cable Attenuation Factor [dB]
- DCF: Duty Cycle Factor (dB) $\text{DCF} = 20\log 100/2 = -34\text{dB}$

*Note: applicable for Fundamental and Harmonics

No external pre-amplifiers are used.

In the frequency range above 2.9GHz, the field strength is manually calculated using the following equation

$$[\text{dB}\mu\text{v}/\text{m}] \text{ FS} = \text{RA} + \text{AF} + \text{CF} + \text{PRAF} + \text{DCF}$$

PRAF: Preamplifier Gain Factor

7. Fundamental Emission Bandwidth

7.1 Test Specification

433.92 MHz, FCC Part 15, Subpart C, Section 15.231(c)

7.2 Test Procedure

The E.U.T. operation mode is described in Section .3

The test used the same set-up as was used for the Radiated Emission Test (Section 6).

One of the receiver markers was placed on the peak of the fundamental frequency, and the delta marker was moved to a level lower than the 20dB from the fundamental marker. The Frequency of the delta marker was recorded.

7.3 Measured Data

Judgement: Passed by 0.435MHz MHz

The E.U.T. met the requirements of FCC Part 15, Subpart C, Section 15.231 (c)

See additional details in Figure 10

Figure 17 External Photo Bottom View

9. Signatures of the E.U.T's Test Engineers

Test	Test Engineer Name	Signature	Date
Radiated Emissions	Y. Mordukhovitch		
Fundamental Emissions Band Width	Y. Mordukhovitch		

10. APPENDIX A - CORRECTION FACTORS

10.1 Correction factors for CABLE

**from EMI receiver
to test antenna
at 3 meter range.**

FREQUENCY (MHz)	CORRECTION FACTOR (dB)	FREQUENCY (MHz)	CORRECTION FACTOR (dB)
10.0	0.5	1200.0	7.5
20.0	0.7	1400.0	8.2
30.0	1.0	1600.0	9.0
40.0	1.2	1800.0	9.6
50.0	1.3	2000.0	10.7
60.0	1.5	2300.0	11.1
70.0	1.6	2600.0	11.8
80.0	1.7	2900.0	12.8
90.0	1.8		
100.0	1.9		
150.0	2.4		
200.0	2.7		
250.0	3.0		
300.0	3.3		
350.0	3.7		
400.0	4.0		
450.0	4.3		
500.0	4.7		
600.0	4.9		
700.0	5.4		
800.0	5.8		
900.0	6.3		
1000.0	6.7		

NOTES:

1. The cable type is RG-214.
2. The overall length of the cable is 27 meters.
3. The above data is located in file 27MO3MO.CBL on the disk marked "Radiated Emission Tests EMI Receiver".

10.2 Correction factors for CABLE

**from EMI receiver
to test antenna
at 10 meter range.**

FREQUENCY (MHz)	CORRECTION FACTOR (dB)	FREQUENCY (MHz)	CORRECTION FACTOR (dB)
10.0	0.6	1200.0	9.7
20.0	1.1	1400.0	10.5
30.0	1.3	1600.0	11.5
40.0	1.6	1800.0	12.6
50.0	1.7	2000.0	13.5
60.0	1.9	2300.0	14.3
70.0	2.0	2600.0	15.5
80.0	2.2	2900.0	16.4
90.0	2.3		
100.0	2.4		
150.0	3.1		
200.0	3.6		
250.0	4.2		
300.0	4.5		
350.0	4.8		
400.0	5.2		
450.0	5.5		
500.0	6.2		
600.0	6.4		
700.0	7.0		
800.0	7.5		
900.0	8.1		
1000.0	8.6		

NOTES:

1. The cable type is RG-214.
2. The overall length of the cable is 34 meters.
3. The above data is located in file 34M10MO.CBL on the disk marked "Radiated Emissions Tests EMI Receiver".

10.3 Correction factors for LOG PERIODIC ANTENNA

**Type LPD 2010/A
at 3 and 10 meter ranges.**

Distance of 3 meters

FREQUENCY (MHz)	AFE (dB/m)
200.0	9.1
250.0	10.2
300.0	11.4
400.0	14.5
500.0	15.2
600.0	17.3
700.0	19.0
850.0	20.1
1000.0	22.2

Distance of 10 meters

FREQUENCY (MHz)	AFE (dB/m)
200.0	9.0
250.0	10.1
300.0	11.2
400.0	14.4
500.0	15.2
600.0	17.2
700.0	19.0
850.0	20.1
1000.0	22.1

NOTES:

1. *Antenna serial number is 1038.*
2. *The above lists are located in file number 38M30.ANT for a 3 meter range, and file number 38M100.ANT for a 10 meter range.*
3. *The files mentioned above are located on the disk marked "Radiated Emission Test EMI Receiver".*

10.4 Correction factors for BICONICAL ANTENNA

**Type BCD-235/B,
at 3 and 10 meter ranges**

3 meter range

FREQUENCY (MHz)	AFE (dB/m)
30.0	14.8
40.0	11.9
50.0	10.2
60.0	9.1
70.0	8.5
80.0	8.9
90.0	9.6
100.0	10.3
110.0	11
120.0	11.5
130.0	11.7
140.0	12.1
150.0	12.6
160.0	12.8
170.0	13
180.0	13.5
190.0	14
200.0	14.8
210.0	15.3
220.0	15.8
230.0	16.2
240.0	16.6
250.0	17.6
260.0	18.2
270.0	18.4
280.0	18.7
290.0	19.2
300.0	19.9

10 meter range

FREQUENCY (MHz)	AFE (dB/m)
30.0	12.1
40.0	10.6
50.0	10.6
60.0	8.9
70.0	8.5
80.0	9.6
90.0	9.4
100.0	9.6
110.0	10.3
120.0	10.7
130.0	12.6
140.0	12.7
150.0	12.7
160.0	13.8
170.0	13.7
180.0	14.9
190.0	13.4
200.0	13.1
210.0	14.0
220.0	14.5
230.0	15.8
240.0	16.0
250.0	16.6
260.0	16.7
270.0	18.3
280.0	18.5
290.0	19.3
300.0	20.9

NOTES:

1. Antenna serial number is 1041.
2. The above list is located in file 41BC10M1.ANT on the disk marked "Radiated Emissions Tests EMI Receiver".

**10.5 Correction factors for BICONICAL ANTENNA Type 3109
3 meter range**

FREQUENCY (MHz)	AFE (dB/m)
20.0	18.4
30.0	14.0
40.0	12.3
50.0	10.6
60.0	8.3
70.0	8.7
80.0	7.2
90.0	8.6
100.0	10.1
110.0	11.2
120.0	11.8
130.0	12.3
140.0	12.7
150.0	12.5
160.0	12.4
170.0	12.1
180.0	12.2
190.0	12.8
200.0	13.7
210.0	14.5
220.0	15.4
230.0	15.9
240.0	16.3
250.0	16.7
260.0	17.1
270.0	17.2
280.0	17.5
290.0	18.1
300.0	18.9

NOTES:

1. Antenna serial number is 3244.
2. The above list is located in file 44BIC3M1.ANT on the disk marked "Radiated Emissions Tests EMI Receiver"

**10.6 Correction factors for BICONICAL ANTENNA Type 3109
10 meter range**

FREQUENCY (MHz)	AFE (dB/m)
20.0	16.4
30.0	13.2
40.0	11.9
50.0	10.4
60.0	8.6
70.0	9.0
80.0	6.8
90.0	7.5
100.0	9.4
110.0	10.8
120.0	11.7
130.0	12.2
140.0	12.5
150.0	12.3
160.0	12.1
170.0	12.2
180.0	12.5
190.0	13.2
200.0	14.0
210.0	14.4
220.0	14.8
230.0	15.0
240.0	15.1
250.0	15.2
260.0	15.7
270.0	15.9
280.0	16.5
290.0	17.0
300.0	17.8

NOTES:

1. Antenna serial number is 3244.
2. The above list is located in file 44BIC10M1.ANT on the disk marked "Radiated Emissions Tests EMI Receiver"

10.7 Correction factors for SAS ANTENNA, 3 meter range
Type SAS-200/511

FREQUENCY (MHz)	AFE (dB/m)	FREQUENCY (MHz)	AFE (dB/m)
1.0	24.9	7.0	38.6
1.5	27.8	7.5	39.2
2.0	29.9	8.0	39.9
2.5	31.2	8.5	40.4
3.0	32.8	9.0	40.8
3.5	33.6	9.5	41.1
4.0	34.3	10.0	41.7
4.5	35.2	10.5	42.4
5.0	36.2	11.0	42.5
5.5	36.7	11.5	43.1
6.0	37.2	12.0	43.4
6.5	38.1	12.5	44.4

NOTES:

- 1. Antenna serial number is 253.*
- 2. The above list is located in file SASLP3M1.ANT on the disk marked "Radiated Emissions Tests EMI Receiver"*
