#### **GENERAL INFORMATION**

#### **Product Description for Equipment Under Test (EUT)**

The **SWAGTEK**'s product, model number: **LOGIC F2** (**FCC ID**: **O55181917**) (the "EUT") in this report was a **LOGIC**, which was measured approximately: 13.5 cm (L) × 6.4 cm (W) × 1.3 cm (H), rated input voltage: DC3.7V battery or DC5.0V charging from adapter. The Highest operation frequency is 2480 MHz.

Adapter information:

Input: AC 100-240V, 50/60Hz, 0.2A

Output: DC5.0V 300mA

Note: The series product, model LOGIC F2, iSWAG Flip and UNONU U8 are electrically identical, the difference them is the model name, we selected LOGIC F2 for fully testing, the details was explained in the attached declaration letter.

\*All measurement and test data in this report was gathered from final production sample, serial number: 170601011 (assigned by the BACL, Chengdu). It may have deviation from any other sample. The EUT supplied by the applicant was received on 2017-06-01, and EUT conformed to test requirement.

#### **Objective**

This test report is prepared on behalf of **SWAGTEK** in accordance with Part 2, Subpart J, and Part 15-Subparts A and B of the Federal Communications Commission's rules.

The objective of the manufacturer is to determine the compliance of EUT with FCC Rules Part 15 B Class B.

#### Related Submittal(s)/Grant(s)

FCC Part 15C DSS submissions with FCC ID: O55181917. FCC Part 22H, 24E, 27 PCE submissions with FCC ID: O55181917.

Report No.: RDG170601011B Page 3 of 17

#### **Test Methodology**

All measurements contained in this report were conducted with ANSI C63.4-2014, American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the range of 9 kHz to 40 GHz.

All of the measurements detailed in this Test Report were performed by Bay Area Compliance Laboratories Corp. (Chengdu).

The Bay Area Compliance Laboratories Corp. Chengdu's measurement Uncertainties (calculated for a k=2 Coverage Factor corresponding to approximately 95% Coverage) were as follows:

-For all of the AC Line Conducted Emissions Tests reported herein: ±3.17 dB.

-For of all of the direct Radiated Emissions Tests reported herein are:

30 MHz to 200 MHz: ±4.7 dB; 200 MHz to 1 GHz: ±6.0 dB;

1 GHz to 6 GHz: ±5.13dB; and, 6 GHz to 40 GHz: ±5.47dB.

And the uncertainty will not be taken into consideration for all test data recorded in the report.

#### **Test Facility**

The test site used by BACL to collect test data is located in the No.5040, Huilongwan Plaza, No.1, Shawan Road, Jinniu District, Chengdu, Sichuan, China.

Test site at BACL has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on April 24, 2015. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.4-2014.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 560332. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

Report No.: RDG170601011B Page 4 of 17

#### SYSTEM TEST CONFIGURATION

## **Description of Test Configuration**

The system was configured for testing in a typical fashion (as normally used by a typical user).

#### **EUT Exercise Software**

The software "winthrax.exe" was used during test.

#### **Equipment Modifications**

No modification was made to the EUT tested.

## **Local Support Equipment List and Details**

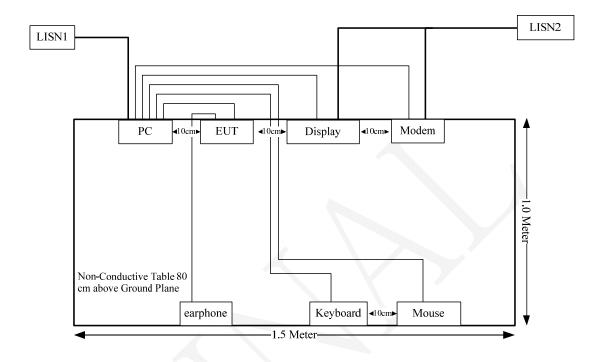

| Manufacturer | Description | Model     | Serial Number     |
|--------------|-------------|-----------|-------------------|

|-----------|---------------------|------------|
| §15.107   | Conducted Emissions | Compliance |
| §15.109   | Radiated Emissions  | Compliance |

Report No.: RDG170601011B Page 7 of 17

### FCC§15.107 - CONDUCTED EMISSIONS

#### **EUT Setup**

Note: 1. Support units were connected to second LISN.

2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

The setup of EUT is according with per ANSI C63.4-2014 measurement procedure. The specification used was with the FCC Part 15 B Class B limits.

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

The PC was connected to the Main LISN with a 120V/60Hz AC power.

#### **EMI Test Receiver Setup**

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

| Frequency Range  | IF B/W |
|------------------|--------|
| 150 kHz – 30 MHz | 9 kHz  |

Report No.: RDG170601011B Page 8 of 17

| Unknown              | Conducted Cable      | Unknown            | NO.5             | 2016-11-10          | 2017-11-09              |
| R&S                  | Test Software        | EMC32              | Version8.53.0    | N/A                 | N/A                     |

<sup>\*</sup> Statement of Traceability: BACL(Chengdu) attests that all of the calibrations on the equipment items listed above were traceable to NIM or to another internationally recognized National Metrology Institute (NMI), and were compliant with the NIST HB 150-2016 Normative Annex B "Implementation of traceability policy in accredited laboratories".

#### **Test Procedure**

During the conducted emission test, the monitor was connected to the outlet of the first LISN and the other support equipments were connected to the outlet of the second LISN.

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All data was recorded in the Quasi-peak and average detection mode.

#### **Corrected Amplitude & Margin Calculation**

The basic equation is as follows:

 $V_C = V_R + A_C + VDF$ 

Herein,

V<sub>C</sub>: corrected voltage amplitude

V<sub>R</sub>: reading voltage amplitude

A<sub>c</sub>: attenuation caused by cable loss

VDF: voltage division factor of AMN or ISN

The "Margin" column of the following data tables indicates the degree of compliance within the applicable limit. For example, a margin of 7dB means the emission is 7dB below the maximum limit. The equation for margin calculation is as follows:

Margin = Limit - Corrected Amplitude

## FCC §15.109 - RADIATED SPURIOUS EMISSIONS

#### **EUT Setup**

Below 1GHz:

Above 1GHz:

The radiated emission tests were performed at the 3 meters distance in chamber, using the setup accordance with the ANSI C63.4-2014. The specification used was the FCC Part 15.109 Class B limits.

Report No.: RDG170601011B Page 13 of 17

#### **EMI Test Receiver Setup**

The system was investigated from 30 MHz to 13.0 GHz.

During the radiated emission test, the EMI test receiver was set with the following configurations:

| Frequency Range   | RBW     | Video B/W | IF B/W  | Detector |
|-------------------|---------|-----------|---------|----------|
| 30 MHz – 1000 MHz | 120 kHz | 300 kHz   | 120 kHz | QP       |
| Above 1 GHz       | 1 MHz   | 3 MHz     | 1       | Peak     |
|                   | 1 MHz   | 10 Hz     | /       | AVG      |

#### **Test Procedure**

During the radiated emissions, the monitor was connected to the first AC floor outlet and the other support equipments were connected to the second AC floor outlet.

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

The data was recorded in the Quasi-peak detection mode for below 1 GHz, peak and average detection mode above 1 GHz.

Report No.: RDG170601011B Page 14 of 17

<sup>\*</sup> Statement of Traceability: BACL(Chengdu) attests that all of the calibrations on the equipment items listed above were traceable to NIM or to another internationally recognized National Metrology Institute (NMI), and were compliant with the NIST HB 150-2016 Normative Annex B "Implementation of traceability policy in accredited laboratories".

#### **Corrected Amplitude & Margin Calculation**

The Corrected Amplitude is calculated by adding the Antenna Loss and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

Corrected Amplitude = Meter Reading + Antenna Factor + Cable Loss - Amplifier Gain

The "Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7 dB means the emission is 7 dB below the limit. The equation for margin calculation is as follows:

Margin = Limit – Corrected Amplitude
