# FCC REPORT (Bluetooth)

| Applicant:              | SWAGTEK  |
|-------------------------|--|
| Address of Applicant:   | 10205 NW 19th Street, STE 101, Miami, FL33172, USA |
| Equipment Under Test (E | EUT)   |
| Product Name:           | 2.4 inch 3G Feature phone                          |
| Model No.:              | B8K, Kite, K8                                      |
| Trade mark:             | LOGIC, iSWAG, UNONU                                |
| FCC ID:                 | O55243221  |
| Applicable standards:   | FCC CFR Title 47 Part 15 Subpart C Section 15.247  |
| Date of sample receipt: | 02 Aug., 2021                                      |
| Date of Test:           | 02 Aug., to 20 Aug., 2021                          |
| Date of report issued:  | 23 Aug., 2021                                      |
| Test Result:            | PASS *   |

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the JYT product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

### **4** Test Summary

| Test Items                       | Section in CFR 47   | Test Data          | Result |
|----------------------------------|---------------------|--------------------|--------|
| Antenna Requirement              | 15.203 & 15.247 (b) | See Section 6.1    | Pass   |
| AC Power Line Conducted Emission | 15.207              | See Section 6.2    | Pass   |
| Conducted Peak Output Power      | 15.247 (b)(1)       | Appendix A – BT    | Pass   |
| 20dB Occupied Bandwidth          | 15.247 (a)(1)       | Appendix A – BT    | Pass   |
| Carrier Frequencies Separation   | 15.247 (a)(1)       | Appendix A – BT    | Pass   |
| Hopping Channel Number           | 15.247 (a)(1)       | Appendix A – BT    | Pass   |
| Dwell Time                       | 15.247 (a)(1)       | Appendix A – BT    | Pass   |
| Conducted Band Edge              | 45 005 8 45 000     | Appendix A – BT    | Pass   |
| Radiated Band Edge               | 15.205 & 15.209     | See Section 6.9.2  | Pass   |
| Conducted Spurious Emission      |                     | Appendix A – BT    | Pass   |
| Radiated Spurious Emission       | 15.247(d)           | See Section 6.10.2 | Pass   |
| Remark:                          |                     |                    |        |

Pass: The EUT complies with the essential requirements in the standard. 1.

2. N/A: Not Applicable.

The cable insertion loss used by "RF Output Power" and other conduction measurement items is 0.5dB (provided by З. the customer).

| Test Method: | ANSI C63.10-2013                           |

### **5** General Information

### **5.1 Client Information**

| Applicant:             | SWAGTEK  |
|------------------------|--|
| Address:               | 10205 NW 19th Street, STE 101, Miami, FL33172, USA |
| Manufacturer/ Factory: | SWAGTEK  |
| Address:               | 10205 NW 19th Street, STE 101, Miami, FL33172, USA |

## 5.2 General Description of E.U.T.

| Product Name:          | 2.4 inch 3G Feature phone   |
|------------------------|---|
| Model No.:             | B8K, Kite, K8   |
| Operation Frequency:   | 2402MHz~2480MHz   |
| Transfer rate:         | 1/2/3 Mbits/s   |
| Number of channel:     | 79  |
| Modulation type:       | GFSK, π/4-DQPSK, 8DPSK  |
| Modulation technology: | FHSS  |
| Antenna Type:          | Internal Antenna  |
| Antenna gain:          | 1.45 dBi  |
| Power supply:          | Rechargeable Li-ion Battery DC3.7V, 1400mAh   |
| AC adapter:            | Input: AC100-240V, 50/60Hz, 0.1A  |
|                        | Output: DC 5.0V, 500mA  |
| Remark:                | Model No.: B8K, Kite, K8 were identical inside, the electrical circuit design, layout, components used and internal wiring, with only difference being trademark.LOGIC is for B8K. iSWAG is for Kite.UNONU is for K8. |
| Test Sample Condition: | The test samples were provided in good working order with no visible defects.   |

| Operation   | Operation Frequency each of channel for GFSK, $\pi$ /4-DQPSK, 8DPSK |         |           |         |           |         |           |  |
|---|---|---------|-----------|---------|-----------|---------|-----------|--|
| Channel   | Frequency   | Channel | Frequency | Channel | Frequency | Channel | Frequency |  |
| 0   | 2402MHz   | 20      | 2422MHz   | 40      | 2442MHz   | 60      | 2462MHz   |  |
| 1   | 2403MHz   | 21      | 2423MHz   | 41      | 2443MHz   | 61      | 2463MHz   |  |
| 2   | 2404MHz   | 22      | 2424MHz   | 42      | 2444MHz   | 62      | 2464MHz   |  |
| 3   | 2405MHz   | 23      | 2425MHz   | 43      | 2445MHz   | 63      | 2465MHz   |  |
| 4   | 2406MHz   | 24      | 2426MHz   | 44      | 2446MHz   | 64      | 2466MHz   |  |
| 5   | 2407MHz   | 25      | 2427MHz   | 45      | 2447MHz   | 65      | 2467MHz   |  |
|   |   |         |           |         |           |         |           |  |
| 15  | 2417MHz   | 35      | 2437MHz   | 55      | 2457MHz   | 75      | 2477MHz   |  |
| 16  | 2418MHz   | 36      | 2438MHz   | 56      | 2458MHz   | 76      | 2478MHz   |  |
| 17  | 2419MHz   | 37      | 2439MHz   | 57      | 2459MHz   | 77      | 2479MHz   |  |
| 18  | 2420MHz   | 38      | 2440MHz   | 58      | 2460MHz   | 78      | 2480MHz   |  |
| 19  | 19 2421MHz 39 2441MHz 59 2461MHz                                    |         |           |         |           |         |           |  |
| Remark: Channel 0, 39 &78 selected for GFSK, π/4-DQPSK and 8DPSK. |   |         |           |         |           |         |           |  |

### 5.3 Test environment and mode

| Operating Environment:      |  |
|-----------------------------|--|
| Temperature:                | 24.0 °C  |
| Humidity:                   | 54 % RH  |
| Atmospheric Pressure:       | 1010 mbar  |
| Test Modes:                 |  |
| Non-hopping mode:           | Keep the EUT in continuous transmitting mode with worst case data rate.  |
| Hopping mode:               | Keep the EUT in hopping mode.  |
| Remark                      | GFSK (1 Mbps) is the worst case mode.                                    |
| Padiated Emission: The same | he was placed 0.8m (below 1GHz)/1.5m (above 1GHz) above the ground plane |

Radiated Emission: The sample was placed 0.8m (below 1GHz)/1.5m (above 1GHz) above the ground plane of 3m chamber\*. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

### **5.4 Description of Support Units**

The EUT has been tested as an independent unit.

#### **5.5 Measurement Uncertainty**

| Parameters                          | Expanded Uncertainty |
|-------------------------------------|----------------------|
| Conducted Emission (9kHz ~ 30MHz)   | ±1.60 dB (k=2)       |
| Radiated Emission (9kHz ~ 30MHz)    | ±3.12 dB (k=2)       |
| Radiated Emission (30MHz ~ 1000MHz) | ±4.32 dB (k=2)       |
| Radiated Emission (1GHz ~ 18GHz)    | ±5.16 dB (k=2)       |
| Radiated Emission (18GHz ~ 40GHz)   | ±3.20 dB (k=2)       |

### 5.6 Additions to, deviations, or exclusions from the method

No

### 5.7 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • FCC - Designation No.: CN1211

JianYan Testing Group Shenzhen Co., Ltd. has been accredited as a testing laboratory by FCC(Federal Communications Commission). The test firm Registration No. is 727551.

#### • ISED – CAB identifier.: CN0021

The 3m Semi-anechoic chamber of JianYan Testing Group Shenzhen Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

#### • A2LA - Registration No.: 4346.01

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 General requirements for the competence of testing and calibration laboratories. The test scope can be found as below link: <u>https://portal.a2la.org/scopepdf/4346-01.pdf</u>

### 5.8 Laboratory Location

JianYan Testing Group Shenzhen Co., Ltd. Address: No.101, Building 8, Innovation Wisdom Port, No.155 Hongtian Road, Huangpu Community, Xinqiao Street, Bao'an District, Shenzhen, Guangdong, People's Republic of China. Tel: +86-755-23118282, Fax: +86-755-23116366 Email: info-JYTee@lets.com, Website: <u>http://www.ccis-cb.com</u>

### 6.10 Spurious Emission

#### 6.10.1 Conducted Emission Method

| Test Requirement: | FCC Part 15 C Section 15.247 (d)  |
|-------------------|---|
| Limit:            | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |
| Test setup:       |   |
| Test Instruments: | Refer to section 5.9 for details  |
| Test mode:        | Non-hopping mode  |
| Test results:     | Pass  |
| Measurement Data: | Refer to Appendix A - BT  |

#### 6.10.2 Radiated Emission Method

| Test Requirement:     | FCC Part 15 C S                           | Section 15.2                 | 209                             |                        |   |
|-----------------------|---|------------------------------|---------------------------------|------------------------|---|
| Test Frequency Range: | 9 kHz to 25 GHz                           | 2                            |                                 |                        |   |
| Test Distance:        | 3m or 10m                                 |                              |                                 |                        |   |

| Test Procedure:       |   | was placed                   | Ground Reference Plane          | Angulier Contro        | ting table 0.8m(below   |
|                       | (below 1GH<br>360 degree                  | lz)or 3 mete<br>s to determi | er chamber(aborine the position | ve 1GHz)<br>of the hig | at a 10 meter chamber<br>. The table was rotated<br>hest radiation.<br>3 meters(above 1GHz) |

Project No.: JYTSZE2108006

|                   | away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.   |  |  |  |  |
|-------------------|--|--|--|--|--|
|                   | 3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.  |  |  |  |  |
|                   | 4. For each suspected emission, the EUT was arranged to its worst case<br>and then the antenna was tuned to heights from 1 meter to 4 meters<br>and the rota table was turned from 0 degrees to 360 degrees to find<br>the maximum reading.  |  |  |  |  |
|                   | <ol> <li>The test-receiver system was set to Peak Detect Function and<br/>Specified Bandwidth with Maximum Hold Mode.</li> </ol>   |  |  |  |  |
|                   | 6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. |  |  |  |  |
| Test Instruments: | Refer to section 5.9 for details   |  |  |  |  |
| Test mode:        | Non-hopping mode   |  |  |  |  |
| Test results:     | Pass   |  |  |  |  |
| Remark:           | <ol> <li>Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found<br/>the Y-axis is the worst case.</li> <li>9 kHz to 30 MHz is noise floor and lower than the limit 20dB, so only<br/>shows the data of above 30MHz in this report.</li> </ol>   |  |  |  |  |

Remark:

- 1. Final Level = Receiver Read level + Antenna Factor + Cable Loss Preamplifier Factor.
- 2. The emission levels of other frequencies are lower than the limit 20dB and not show in test report.
- 3. The Aux Factor is a notch filter switch box loss, this item is not used.
