Charge for 24 hours before using.

Get to know your smartphone.

Unlocking Your Phone

To unlock your L5U you must push the small button on the right of the phone underneath the volume control. The screen will light up and you will see a icon with a lock at the bottom middle. Click and slide up to unlock

Dialing

From the keypad interface the mobile phone will search to find a match in your contacts as you type in the information. In settings, you can setup voice call, video call, quick responses and others.

Answer/Reject Call

When you receive an incoming call, a notification message appears on the screen so you can accept call, Drag the handset icon across the screen to answer. To reject the call, drag the handset icon to the icon that looks as follows. 📞 You will also have an option to send an SMS message. Select this icon 📧 to send a SMS message instead.

Send Text Messages

1)Open the "Messages" application. 2) Choose "New Message" or click the icon. ✉ 3)In the To: field enter in the phone number of the cell phone you want to send the message to. 4) Finally, type in your message in the message field and hit "Send".

Music Player

Supports MP3, AAC, OGG, MIDI and other music formats. Drag the progress bar while a song is playing to move to any segment of the track. Tap the play button to pause or play. Tap and hold artist, album, or music name to perform operations such as play, add to playing list, set as ring tone, delete, and search. Select search music and play.

Using the Camera

Tap on the screen to focus automatically making the capture of moving objects easier and more convenient

Your mobile phone has a front camera built-in. Tap 📷 to switch to the front camera and take a selfie (self-photo).

Turn on Wi-Fi

Press the Apps-button. Navigate to settings. Under "Wireless and Networks", make sure "Wi-Fi is turned on, if it is not, turn it on. When you see your home networks name, select it. Enter your password and hit "Connect".

Setup Hotspot

1)From your main home screen, head into Settings. 2)In the first section, you may see an option for Hotspot under WiFi and Bluetooth. Tap on it.

3)From there, you'll find shortcuts to change all sorts of settings. 4)You'll want to enter "Mobile Hotspot settings" to at least find out the name of the network you'll be creating, 5)From this menu you'll also be able to enable a password, change the network type, etc. 6)Once you have it setup, all you need to do is activate it.

FCC Statement

1. This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV

technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the

actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is **0.339W/Kg** and when worn on the body, as described in this user guide, is **1.164W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is **1.164W/Kg**. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all

reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on

FCC ID: [O55501417](#) Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations.

To comply with RF exposure requirements, a minimum separation distance of [10mm](#) must be maintained

between the user's body and the handset, including the

antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
