#### Turn on Wi-Fi

Press the Apps button.

Navigate to Settings.

Under "Wireless and Networks", make sure
"Wi-Fi" is turned on, if it is not, turn it on. When you see your home network's name, select it, enter your password and hit "Connect."

## Setup Hotspot

1)From your main home screen, head into Settings. 2)In the first section, you may see an option for Hotspot under WiFi and Bluetooth. Tap on it.

3)From there, you'll find shortcuts to change all sorts of settings. 4)You'll want to enter "Mobile Hotspot settings" to at least find out the name of the network you'll be creating. 5)From this menu you'll also be able to enable a password, change the network type, etc. 6)Once you have it setup, all you need to do is activate it

#### Infrared Remote Control

From the ZaZaRemote app, press the Menu icon, add a device by pressing +, select your device, the brand, and follow the app instructions.

## Fingerprint ID

To set your fingerprint, go to Settings> Fingerprint> Fingerprint Manage> Continue> Set Up Screen Lock, choose a password, and press the finger you want to use to unlock your device to the Fingerprint ID sensor.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- —Reorient or relocate the receiving antenna.
- —Increase the separation between the equipment and receiver.
- —Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- —Consult the dealer or an experienced radio/TV technician for help.

SAR tests are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands, although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value.

Before a new model phone is a available for sale to the public, it must be tested and certified to the FCC that it does not exceed the exposure limit established by the FCC, Tests for each phone are performed in positions and locations (e.g. at the ear and worn on the body)a s required by the FCC.

For body worn operation, this model phone has been tested and meets the FCC RF exposure guidelines when used with an accessory designated for this product or when used with an accessory that contains no metal and that positions the handset a minimum of 5m m from the body. Non-compliance with the above restrictions may result in violation of RF exposure guidelines.
