## ACCESSORIES: QUICK GUIDE

QUICK GUIDE

USER MANUAL

<p style="writing-mode: vertical-rl; transform: rotate(180deg);"><b>135 mm</b></p> <p style="text-align: center;"><b>62 mm</b></p> <p>Thank you for purchasing this innovative LOGIC device. The specifications in this document are subject to change without prior notice.</p> <p>LOGIC and the LOGIC logo are registered trademarks of Swagtek, Inc. Other trademarks are the property of their respective owners.</p> <p>Charge for 24 hours before using.</p>	<p><b>Install SIM card / memory card.</b></p> <p><b>Get to know your Logic phone.</b></p>	<p><b>Connect your Logic phone to the computer using the USB cable.</b></p> <p><b>Copy music files from your computer to your Logic phone.</b></p>	<p><b>FCC Statement</b></p> <p>1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:</p> <p>(1) This device may not cause harmful interference.</p> <p>(2) This device must accept any interference received, including interference that may cause undesired operation.</p> <p>2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.</p> <p><b>NOTE:</b></p> <p>This equipment has been tested and found to comply with the limits for Class B digital devices, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.</p> <p>This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:</p> <p>Reorient or relocate the receiving antenna.</p> <p>Increase the separation between the equipment and receiver.</p> <p>Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.</p> <p>Consult the dealer or an experienced radio/TV technician for help.</p> <p><b>SAR Information Statement</b></p> <p>Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on scientific studies that were developed by independent scientific organizations through genetic and through evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones includes a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 Watts/kg. Tests for SAR are conducted with the phone transmitting at its highest certified power level in the tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is</p>	<p>designed to operate at multiple power levels so as to use only the power required to reach the network. It general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified by the FCC that it does not exceed the limit established by the government-adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for the model phone when tested for use at the ear (SAR@E) and when worn on the body, as described in this user guide, is 0.22 W/kg (body-worn measurements, other among phone models, depending upon available accessories and FCC requirements). The maximum SAR in hotspot mode is 0.22 W/kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with a reported SAR level, and used as a condition with the FCC. For more information, SAR information on this model phone is on file with the FCC and can be found under the Public Grant section of <a href="http://www.fcc.gov/otd/foia/other-searching-on-fcc">http://www.fcc.gov/otd/foia/other-searching-on-fcc</a>, <a href="http://www.fcc.gov/otd/foia/other-searching-on-fcc">http://www.fcc.gov/otd/foia/other-searching-on-fcc</a>, or <a href="http://www.fcc.gov/otd/foia/other-searching-on-fcc">http://www.fcc.gov/otd/foia/other-searching-on-fcc</a>.</p> <p><b>Body-worn Operation</b></p> <p>This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 20mm must be maintained between the user's body and the handset, including the antenna. This category includes, but is not limited to, the use of the device with earbuds, and other accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.</p>	<p>QUICK GUIDE   GUÍA RÁPIDA</p>	<p>Gracias por haber adquirido este innovador producto de LOGIC.
