HP-5000

FCC Rule Part(s):

Part 15 & 2

Classification:

FCC Class B Computing Device Peripheral (JBP)

Standard(s):

FCC Class B: 2001(CISPR 22)

Equipment(EUT) Type:

PDP MONITOR / HP-5000

Brand Name:

HARSPER CO.,LTD.

Port/ Connector(s)

Audio input(Pin jack), Video input(BNC), S-video(S terminal)
Component Video input(BNC), RGB input(15pin D-sub),
RS-232C(9pin D-sub), Speaker output

The device bearing the trade name and model specified above, has been shown to comply with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-1992.(See Test Report if any modifications were made for compliance)

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

HYUNDAI C-Tech. certifies that no party to application has been denied the FCC benefits pursuant to Section 5301 of the Anti-Drug Abuse of 1988, 21 U.S.C.853(a).

1. GENERAL INFORMATION

1.1 Product Description

Plasma Monitor is the most advanced display solution for digital A/V integration used for information Displays, Conference System as well as Home Theater. In the plasma Image producing system, gas is confined in a 0.1mm-width space between two glass substrates with transparent electrodes. When voltage is applied between the electrode pairs, it causes an emission of ultraviolet light. This light reacts with RGB phosphors to produce multiple colors that are displayed as the final image. Plasma is an array of cells, know as pixels, which are composed of there sub-pixels, corresponding to the colors red, green and bleu.(red, green or blue). Each sub –pixel is individually controlled by advanced electronics to produce over 16 million different colors. This means that you get perfect, easily viewable images in a display that is 3.3 inches thin.

1.3 Tested System Details

The Model names for all equipment, plus descriptions used in the tested system (including inserted cards) are:

DEVICE TYPE	MANUFACTURER	MODEL NUMBER	FCC ID / DoC	CONNECTED TO
PDP MONITOR (EUT)	HARSPER CO., LTD.	HP-5000	O5XHP400	HOST

DVD PLAYER	ELLION DIGITAL	DVD-360A	DOC	HOST

1.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures in ANSI C63.4/1992. Radiated testing was performed at an antenna to EUT distance of 10 meters.

1.5 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data are located at the 254-1,MAEKOK-RI,HOBUP-MYUN,ICHON-SI,KYOUNGKI-DO, 467-701,KOREA. The site is constructed in conformance with the requirements of ANSI C63.4 and CISPR Publication 22. Detailed description of test facility was submitted to the Commission and accepted dated July 24,2000(Confirmation Number : EA90661)

2.SYSTEM TEST CONFIGURATION

2.1 Justification

The device was configured for testing in a typical fashion (as a customer would normally use it). During the tests, the following components and I/O cards inside the E.U.T were used.

DEVICE TYPE	MANUFACTURE	MODEL/PART NUMBER
SCAN DRIVE BOARD	SAMSUNG SDI	Y-BUFFER(I) / LJ-92-00561A

A/V BOARD	HARSPER	ZINNA RCA / 20TP009
POWER FILTER	SANSUNG ELECTRO MECHANICS	PP50HW001A/LJ92-00424A

2.2 EUT exercise Software

The EUT exercise program used during radiated and conducted testing was designed to exercise the various system components in a manner similar to a typical use. The software, contained on a 3-1/2 inch disc, was inserted into drive A and is auto starting on power-up. Once loaded, the program sequentially exercises each system component in turn. The sequence used is :(1) Display test, (2) RS 232 test (3) Key board test,(4) Printer test,(5) FDD test,(6) HDD test. The complete cycle takes about 20 seconds and is repeated continuously. As the keyboard and mouse are strictly input devices, no data is transmitted to them during test. They are however, continuously scanned for data input activity. The video resolution modes setup and change program was used during the radiated and conducted emission testing

2.3 Cable Description

The marked "(D)" means the Data Cable and "(P)" means the Power Cable.

2.6 Configuration of Test system

Line Conducted Test : EUT was connected to LISN, all other supporting equipment were connected to another LISN.

Preliminary Power line Conducted Emission tests were performed by using the procedure in ANSI C63.4/1992 7.2.3 to determine the worse operating conditions.

Radiated Emission Test : Preliminary Radiated Emissions tests were conducted using the procedure in ANSI C63.4/1992 8.3.1.1 to determine the worse operating condition. Final Radiated Emission tests were conducted at 10 meter open area test site.

5. Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor.

The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF$$

where FS = Field Strength

RA = Receiver Amplitude

AF = Antenna Factor

CF = Cable Attenuation Factor

Assume a receiver reading of 21.5 dBuV is obtained. The Antenna Factor of 7.4 and a Cable Factor of 1.1 is added. The 30 dBuV/m value was mathematically converted to its corresponding level in uV/m.

$$FS = 21.5 + 7.4 + 1.1 = 30 \text{ dBuV/m}$$

$$\text{Level in uV/m} = \text{Common Antilogarithm} [(30 \text{ dBuV/m})/20] = 31.6 \text{ uV/m}$$
