RE: Darfon Electronics Corp.

FCC ID: O62H400

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

1. The peak power measurement at section 3.6 did not show the values of the cable loss on page 17,18, which should be provided.
2. Please indicate where I may find the FCC part 15.21 Information to User Statement in the user manual.
“Section 15.21 Information to user.
The users manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.”
3. FYI. The radiated emission (average values) measured with VBW=300Hz on page 46 will be higher than that measured with VBW=10Hz.
4. FYI. The span=20MHz set for measuring occupied bandwidth p59 was too large. Please set span=3 to 5MHz, which about 3 to 5 times of the occupied bandwidth, to measure the bandwidth of Bluetooth device in the future for the upcoming project.
5. FYI: The limit for emission frequency 2400MHz shown on page 43, 44 would easily confuse the reviewer. It would be better if the test report could be revised on the bandedge emission test item for the upcoming project..

Best regards,

~~~~~
