Hi Dennis,

Please find the updated test report and users manual in the attachment.

Regarding to the problems from FCC, we solved them in as follows:

1) The side view external photo is in the rest report, section 13.8.

Grant: please modify the distance into 5cm and put 50% operational-based push-to-talk duty cycle in the grant.

We have put the 50% operational-based push-to-talk duty cycle in the users manual. page 15, operation, specification.

2) In the updated users manual, FRS operation output power is 129mW, which is consistent with the output power showed in Tune-up exhibit. It is radiated power.

Please help reviewing these updated exhibits. And I have uploaded them to your website too. If you have any other questions, please let me know as soon as possible. Thank you very much!

Best Regards,

Jennifer Song
