RE: TRANWO TECHNOLOGY CORP.

FCC ID: O6LTTD-70R

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) Please explain the validity of the modular information provided. Photographs/design of the device only show the form factor to be the same, while the RF circuitry is designed differently than shown.
- 2) If the specifications still apply (although photographs are different), please note that if the module itself changes in design from what was reported and tested to the FCC in the original application, TRANWO will still be responsible for a PC application or new application as necessary in the future.
- 3) New Label provided does not appear to include the 2 part statement from the exhibit provided. Please correct/review.
- 4) A response for item 5 was not provided, please confirm that 120 VAC/60Hz was used for AC powerline emissions tests. Note the FCC requires testing at proper AC line levels for North America.
- 5) Per my email to Tina, please update the confidentiality letter.

Timothy R. Johnson
Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
