May 1, 2001

FCC ID O78SCV99L

1. The portable radio, O78SCU99BL, is a push to talk radio (PTT). The duty factor will not exceed 50%. In actual usage, the duty factor is 5% or less. The radio does not have the capability to operate in a full duplex mode and any attempt to operate in a continuous CW mode by holding the PTT button 'IN' will result in the transmitter "un-keying" due to the time out timer or dying due to battery.
2. There is a belt clip option which is used to carry the radio on the belt during the receive mode. The user manual contains warnings not to use the radio transmit mode while on the user's belt.
3. Shown below are various operator manuals which were later modified for the inclusion of RF exposure warnings.

"To maintain compliance with FCC RRF exposure guidelines, DO NOT TRANSMIT WHILE USING THE BELT CLIP. The belt clip is for carrying purposes only."

4. The user is advised to hold the radio **at least 2"** away from the head when transmitting.
5. The user manual has been written to warn the user not to substitute an antenna that is different than the antenna supplied by the manufacturer.

Sincerely,

Walter C Simciak  
Chief Engineer
