Federal Communications Commission

Dear Sir or Madam:

Contained within this document is are pictures of the exterior of the SCV32 transceiver. It is made using the same tooling used for the RELM ARUMPV320B unit as it is the same unit mechanically and electrically. The front panel is shown without any LOGO's but may have the name of a distributor screened onto it. The FCC label is positioned as shown on the rear of the unit. Details of this label are in another attachment.

The radio is programmed either by cloning from another radio or by a PC. In the case of the PC programming, the application program required to talk to the radio is made available to **only** radio dealers or government agencies.
