RE: FCC ID: O7J-GP0000100C02_ATCB001306
Attention: Ellis Wu

I have a few comments on this Application.

1. Please note that the SAR report 1 section 6.1 and SAR report 4 states that a 2450MHz dipole model number D2450V2 was used for the system check / system validation. Please note that SAR report 1 section 6.3 states that the frequency of validation and system check was 1900MHz. The proper dipole at this frequency is the D1900V2 as stated in the dipole kit information on page 7 of SAR report 1 rev2. Please note that if the 2450MHz dipole model D2450V2 was used during a system check or validation at 1900MHz the test was performed incorrectly. Please provide evidence, consistent data and equipment information to validate report results. This would include properly listing the dipole used and providing the proper dipole calibration certificates for the correct dipole used.
