GENERAL INFORMATION REQUIRED
FOR TYPE ACCEPTANCE

- 2.1033 (c)(1)(2) TOPAZ3, LLC will sell the
FCC ID: 07KSD164
UHF transceiver in quantity,
for use under FCC RULES PART 90.
- 2.1033 (c) TECHNICAL DESCRIPTION
2.1033 (3) User Manual See Exhibit 14
- 2.1033 (c) TECHNICAL DESCRIPTION
- 2.1033(c)(3) Instruction book. A draft copy of the instruction
manual is included as EXHIBIT 6.
- 2.1033(c) (4) Type of Emission: 10K6F3E
90.209
 $B_n = 2M + 2DK$
 $M = 3000$
 $D = 2300$
 $B_n = 2(3000) + 2(2300) = 10.6k$
- 90.217(b) Authorized Bandwidth 11.25 kHz
- 2.1033(c) (4) Type of Emission: 11K25F2D
90.209
 $B_n = 2M + 2DK$
 $M = 9600$
 $D = 825$
 $B_n = 2(9600) + 2(825) = 11.25k$
- 90.217(b) Authorized Bandwidth 11.25 kHz
- 2.1033(c) (4) Type of Emission: 15K4F3E
90.209
 $B_n = 2M + 2DK$
 $M = 3000$
 $D = 4200$
 $B_n = 2(3000) + 2(4200) = 6000 + 8400 = 15.4k$
- 90.217(b) Authorized Bandwidth 11.25 kHz
- 2.1033 (5) Frequency Range: 450-490 MHz
- (6) Power Range and Controls: There are NO user Power
controls.
- (7) Power Output shall not exceed 2.2Watts into a 50 ohm
resistive load.

(8) DC Voltages and Current into Final Amplifier:

POWER INPUT
FINAL AMPLIFIER ONLY

Frequency: 450.10 MHz
Vce = 12 Volts
IC = .570 A

Frequency: 470.00 MHz
Vce = 12 Volts
IC = .580 A

Frequency: 489.00 MHz
Vce = 12 Volts
IC = .580 A

(9) Tune-up procedure. The tune-up procedure is given in EXHIBIT 8.

2.1033 (10) Complete Circuit Diagrams: The circuit diagram is included as EXHIBIT 2. The block diagram is included as EXHIBIT 3.

(11) Function of each electron tube or semiconductor device or other active circuit device:
-SEE EXHIBIT 7.

2.1033(c)(11) A photograph or drawing of the equipment identification label is shown in Exhibit 1.

2.1033(c)(12) Photographs of the equipment of sufficient clarity to reveal equipment construction and layout and label location are shown in Exhibit 4-5.

2.1033(c)(13) For equipment employing digital modulation, a detail description of the modulation technique. This UUT uses FSK to modulate the transmitter.

2.1033(c)(14) data required for 2.1046 to 2.1057 See Below

2.1046(a) RF power output.
RF power is measured by connecting a 50 ohm, Resistive wattmeter to the RF output connector. With a nominal battery voltage of 12 VDC, and the transmitter properly adjusted the RF output measures:

OUTPUT POWER: HIGH - 2.2 Watts

APPLICANT: TOPAZ3, LLC

FCC ID: 07KSD164

REPORT #: T/Topaz3LLC_07J\301UT3\301UT3TestReport.doc

PAGE #: 2 of 25

2.1047(a)(b) Modulation characteristics:

AUDIO FREQUENCY RESPONSE

The audio frequency response was measured in accordance with TIA/EIA Specification 603. The audio frequency response curve is shown below.

The audio signal was fed into a dummy microphone circuit and into the microphone connector. The input required to produce 30 percent modulation level was measured.

2.1047(a)(b) Modulation characteristics

2.1047(b) Audio input versus modulation

The audio input level needed for a particular percentage of modulation was measured in accordance with TIA/EIA Specification 603. The audio input curves versus modulation are shown in pages 6-8. Curves are provided for audio input frequencies of 300, 1000, and 2500 Hz.

MODULATION LIMITING PLOT - 300 Hz - WIDE BAND

Post Limiter Filter The filter must be between the modulation limiter and the modulated stage. At any frequency between 3 & 20 kHz the filter must have an attenuation of $60\log(f/3)$ greater than the attenuation at 1kHz. See the plot below.

2.1049 Occupied bandwidth:

90.210(d) Emission Mask D - 12.5 kHz channel bandwidth equipment. For transmitters designed to operate with a 12.5 kHz channel bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows:

(1) On any frequency from the center of the authorized bandwidth f_0 to 5.625 kHz removed from f_0 : Zero dB.

(2) On any frequency from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5.625 kHz but no more than 12.5 kHz: At least $7.27 (f_d - 2.88 \text{ kHz})$ dB.

(3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz: At least $50 + 10 \log (P)$ dB or 70 dB, whichever is the lesser attenuation.

Data in the plots show that on any frequency removed from the assigned frequency by more than 50%, but not more than 100%: At least 25dB. On any frequency removed from the assigned frequency by more than 100%, but not more than 250%: At least 35 dB. On any frequency removed from the assigned frequency by more than 250%, of the authorized bandwidth: At least $43 + \log(P)$ dB.

Radiotelephone transmitter with modulation limiter.

Test procedure: TIA/EIA-603 para 2.2.11 , with the exception that various tones were used.

2.1051 Spurious emissions at antenna terminals(conducted):
 2.1052 Data on the following page shows the level of conducted spurious responses. The carrier was modulated 100% using a 2500 Hz tone. The spectrum was scanned from 0.4 to at least the 10th harmonic of the fundamental. The measurements were made in accordance with standard TIA/EIA-603.

REQUIREMENTS: Emissions must be $43 + 10\log(P_o)$ dB below the mean power output of the transmitter.
 For 25 kHz $43 + 10\log(2.2) = 43 - 3.0 = 46.4$ dB
 For 12.5 kHz $50 + 10\log(2.2) = 50 - 3.0 = 53.4$ dB

Low Channel

EMISSION FREQUENCY MHz	dB BELOW CARRIER

Method of Measuring Conducted Spurious Emissions

Spurious Emissions at
Antenna Terminals

METHOD OF MEASUREMENT: The procedure used was TIA/EIA-603 STANDARD without any exceptions. An audio generator was connected to the UUT through a dummy microphone circuit and the output of the transmitter connected to a standard load and from the standard load through a pre-selector filter of the spectrum analyzer. The spectrum was scanned from 400 kHz to at least the tenth harmonic of the fundamental using a HP model 8566B spectrum analyzer. The measurements were made using the shielded room located at TIMCO ENGINEERING INC. 849 N.W. State Road 45, Newberry, Florida 32669.

PAGE #: 15 of 25

METHOD OF MEASUREMENTS: The tabulated data shows the results of the radiated field strength emissions test. The spectrum was scanned from 30 MHz to at least the tenth harmonic of the fundamental. This test was conducted per TIA/EIA STANDARD 603 using the substitution method. Measurements were made at the open field test site of TIMCO ENGINEERING, INC. located at 849 NW State Road 45, Newberry, FL 32669.

2.1055 Frequency stability:

90.213(a)(1)

Temperature and voltage tests were performed to verify that the frequency remains within the .00015%, 1.5 ppm specification limit, for 25kHz spacing & 0.00025% for 12.5kHz spacing and 0.0001% for 6.25kHz spacing. The test was conducted as follows: The transmitter was placed in the temperature chamber at 25 degrees C and allowed to stabilize for one hour. The transmitter was keyed ON for one minute during which four frequency readings were recorded at 15 second intervals. The worse case number was taken for temperature plotting. The assigned channel frequency was considered to be the reference frequency. The temperature was then reduced to -30 degrees C after which the transmitter was again allowed to stabilize for one hour. The transmitter was keyed ON for one minute, and again frequency readings were noted at 15 second intervals. The worst case number was recorded for temperature plotting. This procedure was repeated in 10 degree increments up to + 50 degrees C.

Readings were also taken at the end point of the battery voltage of 12VDC, which we estimate to be the battery endpoint.

MEASUREMENT DATA:

Assigned Frequency (Ref. Frequency): 470.074 794 MHz

2.1055(a)(1) Frequency stability:
90.214 Transient Frequency Behavior

REQUIREMENTS: In the 450-500MHz frequency band, transient frequencies must be within the maximum frequency difference limits during the time interval indicated below for 12.5kHz Channels:

Time Interval	Maximum Frequency	Portable Radios 450-500 MHz
t1	+12.5 kHz	10.0 ms
t2	+6.25 kHz	25.0 ms
t3, t4	+12.5 kHz	10.0 ms

TEST PROCEEDURE: TIA/EIA TS603 PARA 2.2.19, the levels were set as follows;

1. Using the variable attenuator the transmitter level was set to 40 dB below the test receivers maximum input level, then the transmitter was turned off.
2. With the transmitter off the signal generator was set 20dB below the level of the transmitter in the above step, this level will be maintained with the signal generator through-out the test.
3. Reduce the attenuation between the transmitter and the RF detector by 30 dB.
4. With the levels set as above the transient frequency behavior was observed & recorded.

2.1055 Frequency stability:
90.214 Transient Frequency Behavior
