Hello Mike,

Reply to the following:

1. Attached below is the Revised Test Report to addressed the issues as you mentioned.

2. Attached below is the 12.5dBi and 11.8dBi Photos.

3. Attached below is the Revise User Manual that I received from client. Note: The following attachments are Acumotion Manual pages with revisions including the Parts 15.19 and 15.21. Please advise if this information is sufficient for the TCB examiner. I am not sure the RF Exposure (OET Bulletin 65) revision is appropriate. My engineer took this reference from a document we had from a local test laboratory. Please advise if this is satisfactory or contact me if you need additional information or revisions.

Thanks,
Christine
