

Wireless CPU Quik Q2687

Product Technical Specification

Reference: **WA_ENG_Q2687_PTS_001**

Revision: **002**

Date: **September 11, 2006**

Powered by the Wavecom Operating System and Open AT®

Cautions

This platform contains a modular transmitter. This device is used for wireless applications. Note that all electronics parts and elements are ESD sensitive.

Information provided herein by WAVECOM is accurate and reliable. However, no responsibility is assumed for its use and any of such WAVECOM information is herein provided "as is" without any warranty of any kind, whether express or implied.

General information about WAVECOM and its range of products is available at the following internet address: <http://www.wavecom.com>

Trademarks

®, WAVECOM®, WISMO®, Open AT® and certain other trademarks and logos appearing on this document, are filed or registered trademarks of Wavecom S.A. in France or in other countries. All other company and/or product names mentioned may be filed or registered trademarks of their respective owners.

Overview

This document defines and specifies the Wireless CPU Quik Q2687, available under this version:

- **Q2687**: EGSM/GPRS/EDGE **900/1800/850/1900** MHz version with **32** Mb of Burst Flash memory and **8** Mb of SRAM (**32/8**)

1.2 List of abbreviations

Abbreviations	Definition
AC	Alternating Current
ADC	Analog to Digital Converter
A/D	Analog to Digital conversion
AF	Audio-Frequency
AT	ATtention (prefix for modem commands)
AUX	AUXiliary
CAN	Controller Area Network
CB	Cell Broadcast

Abbreviations	Definition
CEP	Circular Error Probable
CLK	CLock
CMOS	Complementary Metal Oxide Semiconductor
CS	Coding Scheme
CTS	Clear To Send
DAC	Digital to Analog Converter
dB	Decibel
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment
DCS	Digital Cellular System
DR	Dynamic Range
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTR	Data Terminal Ready
EDGE	Enhance Data rates for GSM Evolution
EFR	Enhanced Full Rate
E-GSM	Extended GSM
EGPRS	Enhance GPRS
EMC	ElectroMagnetic Compatibility
EMI	ElectroMagnetic Interference
EMS	Enhanced Message Service
EN	ENable
ESD	ElectroStatic Discharges
FIFO	First In First Out
FR	Full Rate
FTA	Full Type Approval
GND	GrouND
GPI	General Purpose Input
GPC	General Purpose Connector
GPIO	General Purpose Input Output
GPO	General Purpose Output

Abbreviations	Definition
GPRS	General Packet Radio Service
GPS	Global Positioning System
GSM	Global System for Mobile communications
HR	Half Rate
I/O	Input / Output
LED	Light Emitting Diode
LNA	Low Noise Amplifier
MAX	MAXimum
MIC	MICrophone
MIN	MINimum
MMS	Multimedia Message Service
MO	Mobile Originated
MT	Mobile Terminated
na	Not Applicable
NF	Noise Factor
NMEA	National Marine Electronics Association
NOM	NOMinal
NTC	Negative Temperature Coefficient
PA	Power Amplifier
Pa	Pascal (for speaker sound pressure measurements)
PBCCH	Packet Broadcast Control Channel
PC	Personal Computer
PCB	Printed Circuit Board
PDA	Personal Digital Assistant
PFM	Power Frequency Modulation
PSM	Phase Shift Modulation
PWM	Pulse Width Modulation
RAM	Random Access Memory
RF	Radio Frequency
RFI	Radio Frequency Interference
RHCP	Right Hand Circular Polarization
RI	Ring Indicator

Abbreviations	Definition
RST	ReSeT
RTC	Real Time Clock
RTCM	Radio Technical Commission for Maritime services
RTS	Request To Send
RX	Receive
SCL	Serial CLock
SDA	Serial DAta
SIM	Subscriber Identification Wireless CPU
SMS	Short Message Service
SPI	Serial Peripheral Interface
SPL	Sound Pressure Level
SPK	SPeaKer
SRAM	Static RAM
TBC	To Be Confirmed
TDMA	Time Division Multiple Access
TP	Test Point
TVS	Transient Voltage Suppressor
TX	Transmit
TYP	TYPical
UART	Universal Asynchronous Receiver-Transmitter
USB	Universal Serial Bus
USSD	Unstructured Supplementary Services Data
VSWR	Voltage Standing Wave Ratio

2 General Description

2.1 General Information

Wireless CPU Quik Q2687 is a self-contained E-GSM/GPRS/EDGE 900/1800 and 850/1900 quad-band Wireless CPU with the following features:

2.1.1 Overall Dimensions

- Length: 40 mm
- Width: 32.2 mm
- Thickness: 4 mm

2.1.2 Environment and Mechanics

- Green policy: RoHS compliant
- Complete shielding

The Q2687 Wireless CPU is compliant with RoHS (Restriction of Hazardous Substances in Electrical and Electronic Equipment) Directive 2002/95/EC which sets limits for the use of certain restricted hazardous substances. This directive states that "from 1st July 2006, new electrical and electronic equipment put on the market does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE)".

Wireless CPUs which are compliant with this directive are identified by the RoHS logo on their label.

2.1.3 GSM/GPRS/EGPRS Features

- 2-Watt EGSM – GPRS 900/850 radio section running under 3.6 Volts
- 1-Watt GSM-GPRS1800/1900 radio section running under 3.6 Volts
- 0.5-Watt EGPRS 900/850 radio section running under 3.6 Volts
- 0.4-Watt EGPRS 1800/1900 radio section running under 3.6 Volts
- Hardware GSM/GPRS class 10 and EGPRS class 10 capable

2.1.4 Interfaces

- Digital section running under 2.8V and 1.8V.
- 3V/1V8 SIM interface
- Complete interfacing:
 - Power supply

Wireless CPU Quik Q2687

General Description

- Serial link
- Analog audio
- PCM digital audio
- SIM card
- Keyboard
- USB 2.0 slave
- Serial LCD (not available with AT commands)
- Parallel port for specific applications (under Open AT® control only) TBD

2.1.5 Operating System

- Real Time Clock (RTC) with calendar
- Battery charger
- Echo Cancellation + noise reduction (quadri codec)
- Full GSM or GSM/GPRS Operating System stack

2.1.6 Connection Interfaces

Wireless CPU Quik Q2687 has four external connections:

- Three for RF circuit:
 - UFL connector
 - Soldered connection
 - IMP connection
- One for baseband signals:
 - 100-pin I/O connector (compatible with Wireless CPU Quik Q2686)

2.2 Functional Architecture

The global architecture of the Wireless CPU Quik Q2687 is described below:

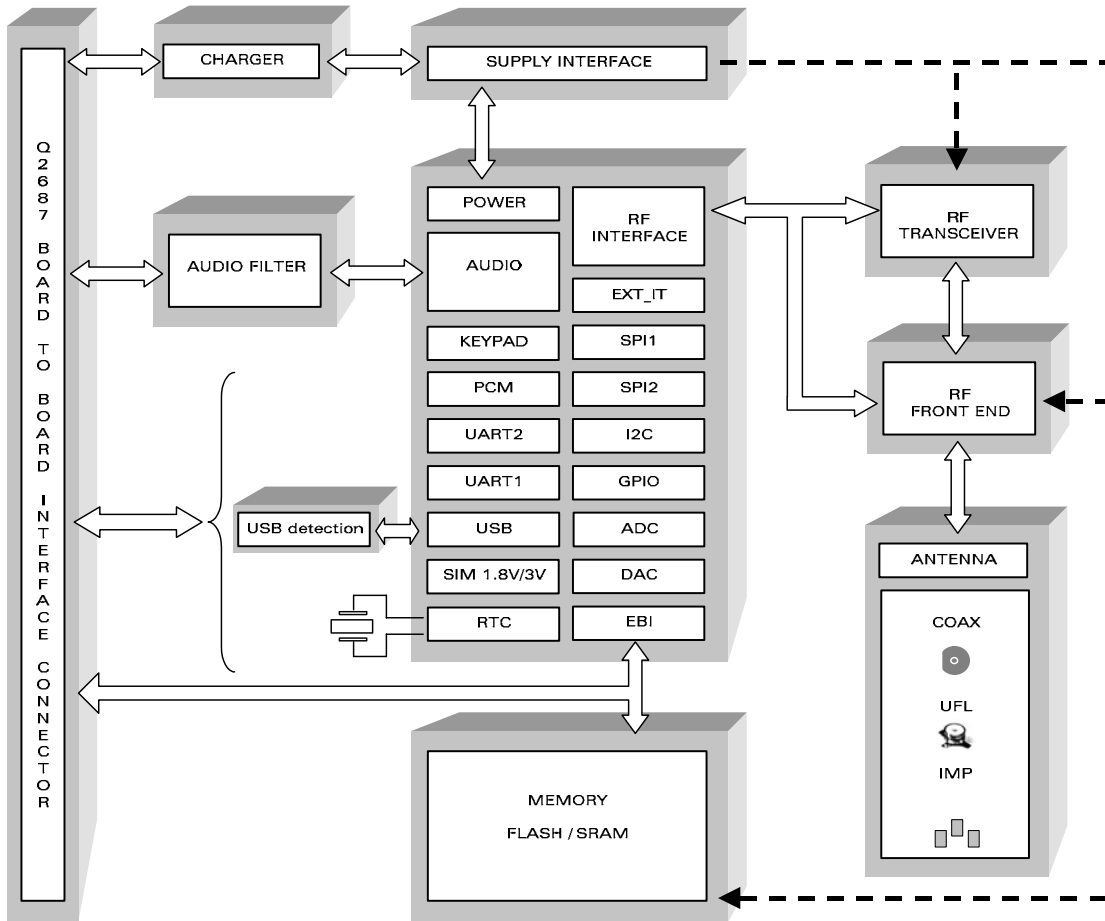

Figure 1: Functional architecture

Wireless CPU Quik Q2687

General Description

2.2.1 RF Functionalities

The Radio Frequency (RF) functionalities complies with the Phase II EGSM 900/DCS 1800 and GSM 850/PCS 1900 recommendation. The frequencies are:

	Transmit band (Tx)	Receive band (Rx)
GSM 850	824 to 849 MHz	869 to 894 MHz
E-GSM 900	880 to 915 MHz	925 to 960 MHz
DCS 1800	1710 to 1785 MHz	1805 to 1880 MHz
PCS 1900	1850 to 1910 MHz	1930 to 1990 MHz

The Radio Frequency (RF) part is based on a specific quad-band chip with a:

- Quad-band LNAs (Low Noise Amplifier)
- Direct Conversion Receiver
- Offset PLL/PL (Phase Locked Loop and Polar Loop) transmitter
- Frequency synthesizer
- Digitally controlled crystal oscillator (DCXO)
- Tx/Rx FEM (Front-End module) for quad-band GSM/GPRS

2.2.2 Baseband Functionalities

The digital part of the Wireless CPU Quik Q2687 is composed of a PCF5213 PHILIPS chip. This chipset uses a 0,18 μm mixed technology CMOS, which allows massive integration as well as low current consumption.

2.3 Operating System

Wireless CPU Quik Q2687 is designed to integrate various types of specific process applications such as vertical applications (telemetry, multimedia, automotive).

The Operating System offers a set of AT commands to control the Wireless CPU. With this standard Operating System, some interfaces of the Wireless CPU are not available, since they are dependent on the peripheral devices connected to the Wireless CPU.

The Operating System is Open AT® compliant.

3 Interfaces

3.1 General Purpose Connector (GPC)

A 100-pin connector is provided to interface the Wireless CPU Quik Q2687 with a board containing a serial or parallel LCD module, a keyboard, a SIM connector, and a battery connection.

The interfaces available on the GPC are described below.

chapter	Name	Driven by AT commands	Driven by Open AT®
3.4	Sérial Interface		X
3.5	Parallel Interface		X
3.6	Keyboard Interface	X	X
3.7	Main Sérial Link	X	X
3.8	Auxiliary Sérial Link	X	X
3.9	SIM Interface	X	X
3.10	Général Purpose IO	X	X
3.11	Analog to Digital Converter	X	X
3.12	Analog audio Interface	X	X
3.13	PWM / Buzzer Output	X	X
3.14	Battery Charging Interface	X	X
3.18	External Interruption	X	X
3.20	BAT-RTC (Backup Battery)	X	X
3.21	FLASH-LED signal	X	X
3.22	Digital Audio Interface (PCM)	X	X
3.23	USB 2.0 Interface	X	X

3.2 Power Supply

The power supply is one of the key issues in the design of a GSM terminal.

Due to the burst emission mode used in GSM / GPRS, the power supply must be able to deliver high current peaks in a short time. During the peaks, the ripple (Uripp) on the supply voltage must not exceed a certain limit (see Table 1 Power supply voltage).

In communication mode, a GSM/GPRS class 2 terminal emits 577 μ s radio bursts every 4.615ms (See the Figure 2).

Figure 2: Power supply during burst emission

In communication mode, a GPRS class 10 terminal emits 1154 μ s radio bursts every 4.615ms.

Only the VBATT power supply input is necessary to provide the Q2687 Wireless CPU.

VBATT:

- Directly supplies the RF components with 3,6 V. It is essential to keep a minimum voltage ripple at this connection in order to avoid any phase error.
The RF Power Amplifier current (**2.0 A** peak in GSM /GPRS mode) flows with a ratio of:
 - 1/8 of the time (around 577 μ s every 4.615ms for GSM /GPRS class 2),
 - 2/8 of the time (around 1154 μ s every 4.615ms for GSM /GPRS class 10) and
 - The rise time is around 10 μ s.
- Is internally used to provide via several regulators, the VCC_2V8 and VCC_1V8, the power supply required for the base band signals.

Wireless CPU Quik Q2687 shielding case is the grounding. The ground plane has to be connected to the motherboard through a complete layer on the PCB.

Input power Supply Voltage

	V_{MIN}	V_{NOM}	V_{MAX}	Ripple max (U_{ripp})
VBATT^{1,2}	3.2	3.6	4.5	250mV (freq < 10kHz) 40mV (10kHz < freq < 100kHz) 5mV (freq > 100kHz)

Table 1 Power supply voltage

Wireless CPU Quik Q2687

Interfaces

- (1): This value has to be maintained during the burst (with 2.0A Peak in GSM, GPRS or EGPRS mode)
- (2): The maximum operating Voltage Stationary Wave Ratio (VSWR) is 2:1

When supplying the Wireless CPU from a battery, the total impedance (battery + protections + PCB) should be <150 mOhms.

Caution:

When the Wireless CPU is in Alarm mode, no voltage must be applied on any pin of the 100-pin connector except on BAT-RTC (pin 7) for RTC operation or ON/~OFF (pin 19) to power ON the Wireless CPU.

3.2.1 Power Consumption

Power consumption is dependent on the configuration used. It is for this reason that the following consumption values are given for each mode, RF band and type of software used (AT or Open AT™).

All the following information is given assuming a 50 Ω RF output.

The following consumption values were obtained by performing measurements on Wireless CPU samples at a temperature of 25° C.

Three VBATT values are used to measure the consumption, VBATTmin (3.2V), VBATTmax (4.5V) and VBATTtyp (3.6V).

The average current is given for the three VBATT values and the peak current given is the maximum current peak measured with the three VBATT voltages.

For a more detailed description of the operating modes, see the Appendix of the AT Command Interface Guide OS 6.61 [4]

For more information about the consumption measurement procedure, see Wireless CPU Quik Q2687 Customer Design Guidelines [2].

3.2.1.1 Power Consumption without Open AT® Processing

The following measurement results are relevant only when:

- There is no Open AT® application
- The Open AT® application is disabled
- No processing is required by the Open AT® application

Wireless CPU Quik Q2687

Power consumption without Open AT [®] application								
Operating mode	Parameters			I _{MIN} average VBATT=4,5V	I _{NOM} average VBATT=3,6V	I _{MAX} average VBATT=3,2V	I _{MAX} peak	unit
Transfer Mode class 10 (3Rx/2Tx)	850/900 MHz	Gam.18 (TX power 0dBm)		93/94	100/100	104/104	400 _{TX}	mA
		Gam.6 (TX power 27dBm)		278/270	285/277	290/282	1300 _{TX}	mA
	1800/1900 MHz	Gam.17 (TX power 5dBm)		134/140	142/147	146/152	420 _{TX}	mA
		Gam.5 (TX power 26dBm)		291/303	298/310	302/314	1400 _{TX}	mA
		Gam.18 (TX power 0dBm)		141/142	148/149	153/154	420 _{TX}	mA

TX means: the current peak is RF transmission burst (Tx burst)

RX means: the current peak is RF reception burst (Rx burst)

¹ **Slow Idle Mode** consumption is dependent on the SIM card used. Some SIM cards respond faster than others, the longer the response time, the higher the consumption. The measurements were performed on a large number of 3V SIM cards, and the results shown in the above table in brackets are the minimum and maximum currents measured from the SIM cards used.

3.2.1.2 Power Consumption with Open AT[®] Software

The power consumption with Open AT[®] software used is Dhrystone application, and the following consumption results were measured while performing on the Dhrystone application.

Power consumption with Dhrystone Open AT [®] application							
Operating mode	Parameters		I _{MIN} average VBATT=4,5V	I _{NOM} average VBATT=3,6V	I _{MAX} average VBATT=3,2V	I _{MAX} peak	unit
Alarm Mode			N/A	N/A	N/A		µA
Fast Idle Mode	Paging 9 (Rx burst occurrence ~2s)		33	38	41	160 _{RX}	mA
	Paging 2 (Rx burst occurrence ~0,5s)		33	38	42	160 _{RX}	mA
Slow Idle Mode	Paging 9 (Rx burst occurrence ~2s)		NA	NA	NA	NA	mA
	Paging 2 (Rx burst occurrence ~0,5s)		NA	NA	NA	NA	mA
Fast Standby Mode			32	38	40		mA
Slow Standby Mode			NA	NA	NA		mA

3.2.1.3 Consumption Waveform Samples

The consumption waveforms are given for a EGSM900 network configuration with AT software running on the Q2687/X61 Wireless CPU.

The VBATT voltage value is 3.6V typical.

Four significant operating mode consumption waveforms are described as:

- Connected Mode (PCL5: Tx power 33dBm)
- Slow Idle mode (Paging 9)
- Fast idle mode (Paging 9)
- Transfer mode (GPRS class 10, PCL3: Tx power 33dBm)

The following waveform displays only the form of the current and for correct current values, see the section 3.2.1.1.

3.2.1.3.1 Connected Mode Current Waveform

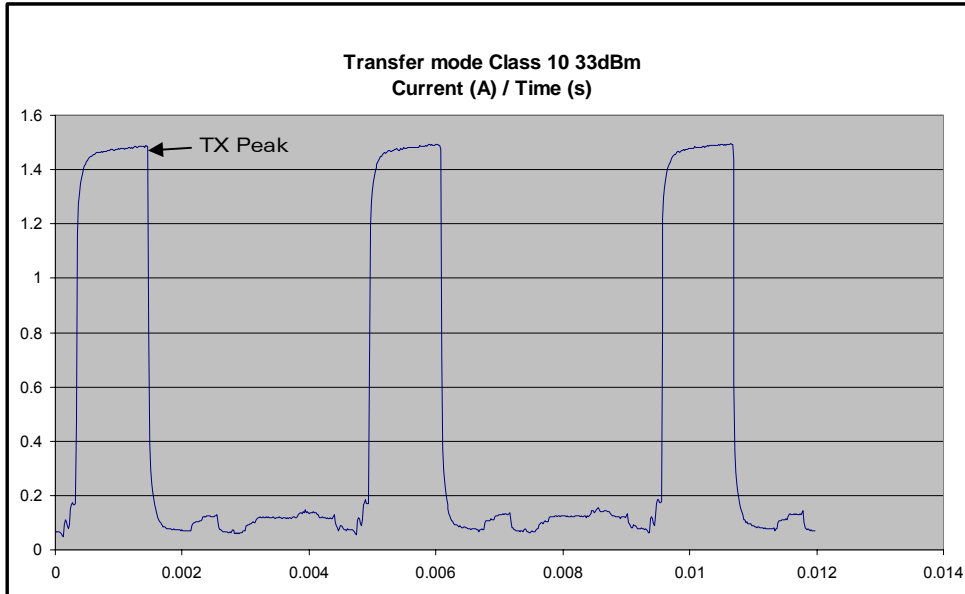

3.2.1.3.2 Slow Idle Mode Current Waveform

3.2.1.3.3 Fast Idle Mode Current Waveform

3.2.1.3.4 Transfer Mode Class 10 Current Waveform

3.2.1.4 Power Supply Pin-out

Power Supply Pin-out

Signal	Pin number
VBATT	1,2,3,4
GND	Shielding

The grounding connection is made through the shielding ⇒ the four leads must be soldered to the ground plane.

3.3 Electrical Information for Digital I/O

The three types of digital I/O on the Wireless CPU Quik Q2687 are: 2.8Volt CMOS, 1.8Volt CMOS, and Open drain.

The three types are as described below:

Electrical characteristics of digital I/O

2.8 Volt type (2V8)					
Parameter	I/O type	Min.	Typ	Max.	Condition
Internal 2.8V power supply	VCC_2V8	2.74V	2.8V	2.86V	
Input / Output pin	V _{IL}	CMOS	-0.5V*	0.84V	
	V _{IH}	CMOS	1.96V	3.2V*	
	V _{OL}	CMOS		0.4V	I _{OL} = - 4 mA
	V _{OH}	CMOS	2.4V		I _{OH} = 4 mA
	I _{OH}			4mA	
	I _{OL}			- 4mA	

*Absolute maximum ratings

All 2.8V I/O pins do not accept input signal voltage above the maximum voltage as specified in the above table, **except for the UART1 interface, which is 3.3V tolerant.**

1.8 Volt type (1V8)					
Parameter	I/O type	Min.	Typ	Max.	Condition
Internal 1V8 power supply	VCC_1V8	1.76V	1.8V	1.94V	
Input / Output pin	V _{IL}	CMOS	-0.5V*	0.54V	
	V _{IH}	CMOS	1.33V	2.2V*	
	V _{OL}	CMOS		0.4V	I _{OL} = - 4 mA
	V _{OH}	CMOS	1.4V		I _{OH} = 4 mA
	I _{OH}			4mA	
	I _{OL}			- 4mA	

*Absolute maximum ratings

Wireless CPU Quik Q2687

Interfaces

Open drain output type						
Signal name	Parameter	I/O type	Minimum	Typ	Maximum	Condition
FLASH-LED	V_{OL}	Open Drain			0.4V	
	I_{OL}	Open Drain			8mA	
BUZZ-OUT	V_{OL}	Open Drain			0.4V	
	I_{OL}	Open Drain			100mA	
SDA / GPIO27 and SCL / GPIO26	V_{TOL}	Open Drain			3.3V	Tolerated voltage
	V_{IH}	Open Drain	2V			
	V_{IL}	Open Drain			0.8V	
	V_{OL}	Open Drain			0.4V	
	I_{OL}	Open Drain			3mA	

The I/Os reset states are described in each interface description chapter. Definitions of these states are as given below:

Reset state definition	
Parameter	Definition
0	Set to GND
1	Set to supply 1V8 or 2V8 depending on I/O type
Pull-down	Internal pull-down with ~60K resistor.
Pull-up	Internal pull-up with ~60K resistor to supply 1V8 or 2V8 depending on I/O type.
Z	High impedance
Undefined	Caution: undefined must not be used in your application if a special state is required at reset. These pins may be a toggling signal during reset.

3.4 Serial Interface

The Wireless CPU Quik Q2687 may be connected to an LCD Wireless CPU driver through either by two SPI bus or an I²C 2-wire interface.

3.4.1 SPI Bus

Both SPI bus interfaces include:

- A CLK signal
- An I/O signal
- An I signal
- A CS signal complying with the standard SPI bus.

SPI bus characteristics:

- Master mode operation
- SPI speed ranges from 101.5 Kbit/s to 13 Mbit/s in master mode operation
- 3 or 4-wire interface
- SPI-mode configuration: 0 to 3
- 1 to 16 bits data length

3.4.1.1 SPI Waveforms

Waveform for SPI transfer with 4-wire configuration in master mode 0 (chip selection is not displayed).

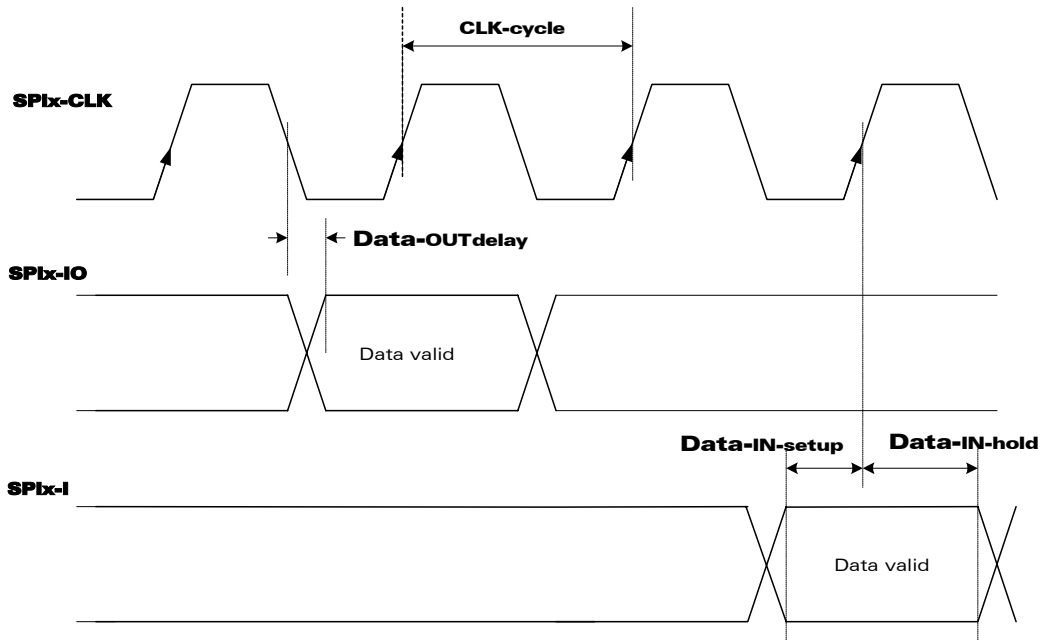

Figure 3: SPI Timing diagrams, Mode 0, Master, and 4-wire
AC characteristics

Signal	Description	Minimum	Typ	Maximum	Unit
CLK-cycle	SPI clock frequency	0.1015		13	MHz
Data-OUT delay	Data out ready delay time			10	ns
Data-IN-setup	Data in setup time	2			ns
Data-OUT-hold	Data out hold time	2			ns

3.4.1.2 SPI Configuration

Operation	Maximum Speed	SPI-Mode	Duplex	3-wire type	4-wire type
Master	13 Mb/s	0,1,2,3	Half	SPIx-CLK; SPIx-IO; ~SPIx-CS	SPIx-CLK; SPIx-IO; SPIx-I; ~SPIx-CS

For the 4-wire configuration, SPIx-I/O is used as output only and SPIx-I is used as input only.

For the 3-wire configuration, SPIx-I/O is used for both as input and output.

3.4.1.3 SPI1 Bus

Pin description

Wireless CPU Quik Q2687

Interfaces

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SPI1-CLK	23	O	2V8	Z	SPI Serial Clock	GPIO28
SPI1-IO	25	I/O	2V8	Z	SPI Serial input/output	GPIO29
SPI1-I	24	I	2V8	Z	SPI Serial input	GPIO30
~SPI1-CS	22	O	2V8	Z	SPI Enable	GPIO31

For Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition, refer to section 3.3, "Electrical information for digital I/O".

3.4.1.4 SPI2 Bus

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SPI2-CLK	26	O	2V8	Z	SPI Serial Clock	GPIO32

SP2-I	29	I	2V8	Z	SPI Serial input	GPIO34
~SPI2-CS	28	O	2V8	Z	SPI Enable	GPIO35

See section 3.3 "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

3.4.2 I²C bus

The I²C interface includes a clock signal (SCL) and data signal (SDA) complying with a 100Kbit/s-standard interface (standard mode: s-mode).

The I²C bus is always in master mode.

The maximum speed transfer range is 400Kbit/s (fast mode: f-mode).

For more information on the I²C bus, see the "I²C Bus Specification Version 2.0" from PHILIPS.

3.4.2.1 I²C Waveforms

I²C bus waveform in master mode configuration:

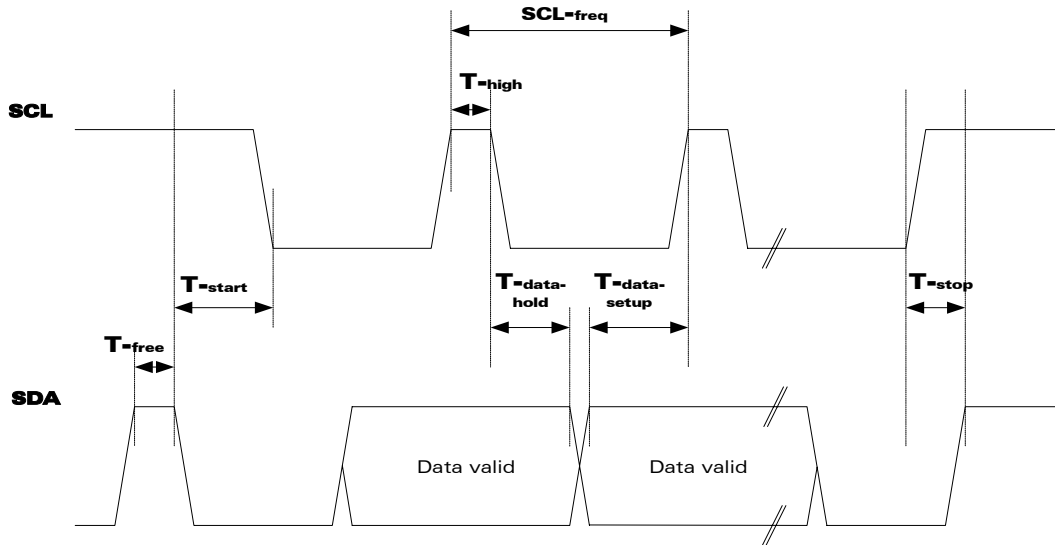

Figure 4: I²C Timing diagrams, Master
AC characteristics

Signal	Description	Minimum	Typ	Maximum	Unit
SCL-freq	I ² C clock frequency	100		400	KHz
T-start	Hold time START condition	0.6			μs
T-stop	Setup time STOP condition	0.6			μs
T-free	Bus free time, STOP to START	1.3			μs
T-high	High period for clock	0.6			μs
T-data-hold	Data hold time	0		0.9	μs
T-data-setup	Data setup time	100			ns

3.4.2.2 I²C Bus pin-out

Wireless CPU Quik Q2687 Interfaces

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SCL	44	O	Open drain	Z	Serial Clock	GPIO26
SDA	46	I/O	Open drain	Z	Serial Data	GPIO27

See section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

3.5 Parallel Interface

The Wireless CPU Quik Q2687 offers a 16-bit wide parallel bus interface.

Few signals are multiplexed. It is possible to have these configurations.

For software information, see the document [4].

A24	53	Undefined	I/O	1v8	Data/Command selection	GPIO2

3.6 Keyboard Interface

This interface provides 10 connections:

- 5 rows (ROW0 to ROW4) and
- 5 columns (COL0 to COL4).

Scanning is digital and debouncing is performed in the Wireless CPU Quik Q2687.

No discrete components such as Rs, Cs (Resistors, Capacitors) are needed.

Pin description of the Keyboard interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
ROW0	68	I/O	1V8	0	Row scan	GPIO9
ROW1	67	I/O	1V8	0	Row scan	GPIO10
ROW2	66	I/O	1V8	0	Row scan	GPIO11
ROW3	65	I/O	1V8	0	Row scan	GPIO12
ROW4	64	I/O	1V8	0	Row scan	GPIO13

COL2	61	I/O	1V8	Pull-up	Column scan	GPIO6
COL3	62	I/O	1V8	Pull-up	Column scan	GPIO7
COL4	63	I/O	1V8	Pull-up	Column scan	GPIO8

See section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

3.7 Main Serial Link (UART1)

A flexible 6-wire serial interface is available, complies with V24 protocol signaling, but not with V28 (electrical interface) due to a 2.8-Volt interface.

The signals are as follows:

- TX data (CT103/TX)
- RX data (CT104/RX)
- Request To Send (~CT105/RTS)
- Clear To Send (~CT106/CTS)
- Data Terminal Ready (~CT108-2/DTR)
- Data Set Ready (~CT107/DSR).

The set of RS-232 signals may be required for GSM DATA services application and is generated by the General Purpose I/O provided by the Wireless CPU Quik Q2687.

The two additional signals are:

- Data Carrier Detect (~CT109/DCD) and
- Ring Indicator (CT125/RI).

Pin description of UART1 interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
CT103/TXD1*	71	I	2V8	Z	Transmit serial data	GPIO36
CT104/RXD1*	73	O	2V8	1	Receive serial data	GPIO37
~CT105/RTS1*	72	I	2V8	Z	Request To Send	GPIO38
~CT106/CTS1*	75	O	2V8	Z	Clear To Send	GPIO39

~CT108-2/DTR1*	76	I	2V8	Z	Data Terminal Ready	GPIO41
~CT109/DCD1 *	70	O	2V8	Undefined	Data Carrier Detect	GPIO43
~CT125/RI1 *	69	O	2V8	Undefined	Ring Indicator	GPIO42
CT102/GND*	Shielding leads		GND		Ground	

See Section "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

*According to PC view

The **rise** and **fall time** of the reception signals (mainly due to CT103) must be less than **300 ns**.

The Q2687 Wireless CPU is designed to operate using all the serial interface signals. In particular, it is mandatory to use RTS and CTS for hardware flow control in order to avoid data corruption during transmission.

The maximum baud rate of UART1 is **115 Kbit/s**.

3.8 Auxiliary Serial Link (UART2)

The Bluetooth application on auxiliary serial interface (UART2) is available on Wireless CPU Quik Q2687 product. See the Application Note WM_ASW_AOT_APN_016 and the document [4].

Pin description of UART2 interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
CT103 / TXD2*	31	I	1V8	Z	Transmit serial data	GPIO14
CT104 / RXD2*	30	O	1V8	Z	Receive serial data	GPIO15
~CT106 / CTS2*	32	O	1V8	Z	Clear To Send	GPIO16
~CT105 / RTS2*	33	I	1V8	Z	Request To Send	GPIO17

See Section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

* According to PC view

The Q2687 is designed to operate using all the serial interface signals. In particular, it is mandatory to use RTS and CTS for hardware flow control in order to avoid data corruption during transmission.

The maximum baud rate of UART2 is 115 Kbit/s.

3.9 SIM Interface

The Subscriber Identification Module (SIM) may be directly connected to the Wireless CPU Quik Q2687 via this dedicated interface.

3.9.1 General Description

The five signals are:

- SIM-VCC: SIM power supply
- ~SIM-RST: reset
- SIM-CLK: clock
- SIM-IO: I/O port
- SIMPRES: SIM card detect

The SIM interface controls a 3V/1V8 SIM. This interface is fully compliant with the GSM 11.11 recommendations related to SIM functions.

Wireless CPU Quik Q2687 Interfaces

Pin description of SIM interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SIM-CLK	14	O	2V9 / 1V8	0	SIM Clock	Not mux
~SIM-RST	13	O	2V9 / 1V8	0	SIM Reset	Not mux
SIM-IO	11	I/O	2V9 / 1V8	*Pull-up	SIM Data	Not mux
SIM-VCC	9	O	2V9 / 1V8		SIM Power Supply	Not mux
SIMPRES	12	I	1V8	Z	SIM Card Detect	GPIO18

*SIM-IO pull-up is about 10K ohm

See Section 3.3 "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

Electrical Characteristics of the SIM interface

Parameter	Conditions	Min.	Typ	Max.	Unit
SIM-IO V _{IH}	I _{IH} = ± 20μA	0.7xSIMVCC			V
SIM-IO V _{IL}	I _{IL} = 1mA			0.4	V
~SIM-RST, SIM-CLK V _{OH}	Source current = 20μA	0.9xSIMVCC			V
SIM-IO V _{OH}	Source current = 20μA	0.8xSIMVCC			
~SIM-RST, SIM-IO, SIM-CLK V _{OL}	Sink current = -200μA			0.4	V
SIM-VCC Output Voltage	SIMVCC = 2.9V IVCC= 1mA	2.84	2.9	2.96	V
	SIMVCC = 1.8V IVCC= 1mA	1.74	1.8	1.86	V
SIM-VCC current	VBATT = 3.6V			10	mA
SIM-CLK Rise/Fall Time	Loaded with 30pF		20		ns
~SIM-RST, Rise/Fall Time	Loaded with 30pF		20		ns
SIM-IO Rise/Fall Time	Loaded with 30pF		0.7	1	μs
SIM-CLK Frequency	Loaded with 30pF			3.25	MHz

Note:

When **SIMPRES** is used, a **low to high** transition means that the SIM card is inserted and a **high to low** transition means that the SIM card is removed.

3.10 General Purpose Input/Output

The Wireless CPU Quik Q2687 provides up to 44 General Purpose I/O. They are used to control any external device such as a LCD or a Keyboard backlight.

All grey highlighted I/O are 1V8 whereas the others (not highlighted in grey) are 2V8.

Pin description of the GPIO

Signal	Pin number	I/O	I/O type*	Reset state	Multiplexed with

See Section "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

* If the parallel bus is used, these pins will be mandatory for the parallel bus functionality. See "Section 3.5"

** If a Bluetooth module is used with the Q2687 Wireless CPU, this GPIO must be reserved.

3.11 Analog to Digital Converter

Two Analog to Digital Converter (ADC) inputs are provided by the Wireless CPU Quik Q2687. The converters are 10-bit resolution, ranges from 0V to 2V.

Pin description of the ADC

Signal	Pin number	I/O	I/O type	Description
BAT-TEMP*	20	I	Analog	A/D converter
AUX-ADC	21	I	Analog	A/D converter

This input is reserved for a battery charging temperature sensor, see Section 3.16, "Battery Charging interface".

Electrical Characteristics of the ADC

Parameter		Min	Typ	Max	Unit
Resolution			10		bits
Sampling rate				138 ¹	sps
Input signal range		0		2	V
INL (Integral non linearity)			15		mV
DNL (Differential non linearity)			2.5		mV
Input impedance	BAT-TEMP		1M*		Ω
	AUX-ADC		1M		Ω

* Internal pull-up to 2.8V

¹ Sampling rate only for AUX-ADC and **Open AT®** application

3.12 Digital to Analog Converter

One Digital to Analog Converter (DAC) input is provided by the Q2687 Wireless CPU. The converter is 8-bit resolution, ranges from 0V to 2.3V.

Pin description of the DAC

Signal	Pin number	I/O	I/O type	Description
AUX-DAC	82	O	Analog	D/A converter

This output assumes a typical external load of 2kΩ and 50pF in parallel.

Electrical Characteristics of the DAC

Parameter	Min	Typ	Max	Unit
Resolution		8		bits
Output signal range	0		2.3	V
Output voltage after reset		1.147		V
INL (Integral non linearity)	-5		+5	LSB
DNL (Differential non linearity)	-1		+1	LSB

3.13 Temperature Sensor Interface

A temperature sensor is implanted in the Q2687 Wireless CPU. The software may inform (via an ADC) the temperature in the Q2687 Wireless CPU. The following waveform describes the characteristic of this function.

For more details, see the document [4].

The average step is 15mV / °C.

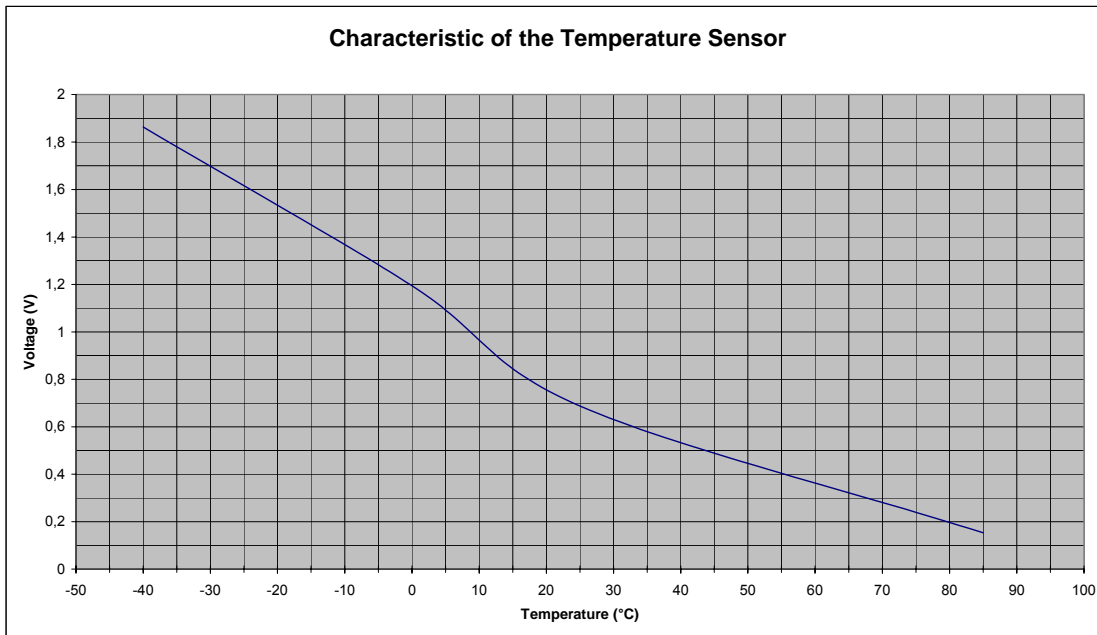

Figure 5: Characteristics of the Temperature Sensor

3.14 Analog Audio Onterface

Two different microphone inputs and two different speaker outputs are supported.

The Wireless CPU Quik Q2687 also includes an echo cancellation feature, which allows hands-free functionality.

3.14.1 Microphone Inputs

The MIC2 inputs already include the biasing for an electret microphone, thus allowing easy connection.

The MIC1 input requires external biasing, if an electret microphone is used.

3.14.1.1 Common microphone input characteristics

The connection may be either differential or single-ended but use of a differential connection in order to reject common mode noise and TDMA noise is strongly recommended. When using a single-ended connection, be sure to have a good ground plane, good filtering and also shielding, in order to avoid any disturbance on the audio path.

The gain of the MIC inputs is internally adjusted and may be tuned using an AT command.

Both may be configured either as differential or single-ended.

3.14.1.2 Main Microphone Inputs (MIC2)

By default, the MIC2 inputs are differential inputs, but may also be configured as single-ended. MIC2 inputs already include convenient biasing for an electret microphone. The electret microphone may be directly connected to these inputs.

AC coupling is already embedded in the Wireless CPU.

Pin description of MIC2

Signal	Pin number	I/O	I/O type	Description
MIC2P	36	I	Analog	Microphone 2 positive input
MIC2N	34	I	Analog	Microphone 2 negative input

3.14.1.3 Auxiliary Microphone Inputs (MIC1)

By default, the MIC1 inputs are single-ended, but may also be configured as differential. An external biasing is needed if an electret microphone is used.

AC coupling is already embedded in the Wireless CPU.

Pin description of MIC1

Signal	Pin number	I/O	I/O type	Description
MIC1P	40	I	Analog	Microphone 1 positive input
MIC1N	38	I	Analog	Microphone 1 negative input

3.14.1.4 Microphone Electrical Characteristics

The characteristics of both Wireless CPU Quik Q2687 microphone inputs are defined in the following tables.

MIC2 Characteristics					
Parameter		Min.	Typ	Max.	Unit
Internal Biasing	Voltage	2	2.1	2.2	V
	Output Current			1.5	mA
Impedance single-ended	Internal AC coupling		100		nF
	MIC2P (MIC2N left open)	1100	1340	1600	Ω
	MIC2P (MIC2N = GND)	900	1140	1400	Ω
	MIC2N (MIC2P left open)	1100	1340	1600	Ω
Input voltage	MIC2N (MIC2P = GND)	900	1140	1400	Ω
	Differential Input Voltage*			346	mV _{RMS}
	Absolute maximum ratings	0		6V **	V

MIC1 Characteristics					
Parameter		Min.	Typ	Max.	Unit
Internal Biasing	Voltage		N/A		V
	Output Current		N/A		A
Impedance single-ended	Internal AC coupling		100		nF
	MIC1P (MIC1N left open)	70	100	162	k Ω
	MIC1P (MIC1N = GND)	70	100	162	k Ω
	MIC1N (MIC1P left open)	70	100	162	k Ω
Input voltage	MIC1N (MIC1P = GND)	70	100	162	k Ω
	Differential Input Voltage *			346	mV _{RMS}
	Absolute maximum ratings	0		6	V

* The input voltage depends on the input microphone gain set by AT command.

** Because MIC2P is internally biased, a coupling capacitor must be used to connect an audio signal provided by an active generator. Only a passive microphone may be directly connected to the MIC2P and MIC2N inputs.

3.14.2 Common Speaker Output Characteristics

The connection is single-ended on SPK1 and either a differential or single-ended on SPK2. Use of a differential connection to reject common mode noise and TDMA noise is strongly recommended. Moreover, in single-ended mode, 1/2 of the power is lost. When using a single-ended connection, be sure to have a good ground plane, a good filtering and also shielding, in order to avoid any disturbance on the audio path.

3.14.2.1 Differential Connection

Impedance of the speaker amplifier output in differential mode is shown below:

Parameter	Typ	Unit
Z (SPK2P, SPK2N)	8	Ω

3.14.2.2 Single-ended Connection

Impedance of the speaker amplifier output in single-ended mode is shown below:

Electrical Characteristics

Parameter	Typ	Unit
Z (SPK1P, SPK1N)	16 or 32	Ω
Z (SPK2P, SPK2N)	4	Ω

3.14.3 Speaker Outputs

3.14.3.1 Speaker 2 Outputs

Pin description of Speaker 2 outputs

Signal	Pin number	I/O	I/O type	Description
SPK2P	39	O	Analog	Speaker 2 positive output
SPK2N	41	O	Analog	Speaker 2 negative output

3.14.3.2 Speaker 1 Outputs

Pin description of Speaker 1 outputs

Signal	Pin number	I/O	I/O type	Description
SPK1P	35	O	Analog	Speaker 1 positive output
SPK1N	37	O	Analog	Speaker 1 negative output

3.14.3.3 Speaker Output Power

The maximum power output of the two speakers is not the same due to different configurations between Speaker1, which is only single-ended, and speaker2, which may be differential. Speaker2 thus provides more power.

The maximum specifications given below are available with the maximum power output configuration values set by AT command.

Speaker1 single-ended SPK1P output characteristics					
Parameter		Min.	Typ	Max.	Unit
Output Biasing	Voltage		1.30		V
Output Voltage		0		2.75	V _{PP}
Output Power	Single-ended with 32-ohm load			27	mW
Output Current	Maximum tolerated			85	mA

Only SPK1P may be used.

Speaker2 differential output characteristics					
Parameter		Min.	Typ	Max.	Unit
Output Biasing	Voltage SPK2P and SPK2N		1.30		V
Output Voltage	Voltage on SPK2P	0		0.9	V _{PP}
	Voltage on SPK2N	0		0.9	V _{PP}
	Diff voltage (SPK2P - SPK2N)	0		1.8	V _{PP}
Output Power	Differential with 8-ohm load			48	mW
Output Current	Maximum tolerated			110	mA

If a single-ended solution is used with the speaker2 output, only one of the two SPK2s must be selected. The result is maximum output power divided by 2.

3.15 Buzzer Output

This output is controlled by a pulse width modulation controller and may be used only as buzzer.

BUZZ-OUT is an open drain output. A buzzer may be directly connected between this output and VBATT. The maximum current is 100 mA (PEAK).

Pin description of PWM/Buzzer output

Signal	Pin number	I/O	I/O type	Reset state	Description
BUZZ-OUT	15	O	Open drain	Z	Buzzer output

See Section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

Electrical Characteristics

Parameter	Condition	Minimum	Maximum	Unit
V _{OL on}	I _{ol} = 100mA		0.4	v
I _{PEAK}	VBATT = VBATTmax		100	mA
Frequency		1	50000	Hz

3.16 Battery Charging Interface

The Wireless CPU Quik Q2687 supports one battery charging circuit, two algorithms and one hardware charging mode (pre-charging) for 3 battery technologies:

- Ni-Cd (Nickel-Cadmium) with algorithm 0
- Ni-Mh (Nickel-Metal Hydride) with algorithm 0
- Li-Ion (Lithium-Ion) with algorithm 1

The two algorithms control a switch, which connects the CHG-IN signal to the VBATT signal. The algorithm controls the frequency and the connected time of the switch. During the charging procedure, battery charging level is controlled and when the Li-Ion algorithm is used, battery temperature is monitored via the BAT-TEMP ADC input.

One more charging procedure is available in the Q2687 Wireless CPU. This is called "Pre-charging" mode, but is a special charging mode as it is activated only when the Wireless CPU is OFF. Control is thus performed by the hardware. The purpose of this charging mode is to avoid battery damage by preventing the battery from being discharged to below the minimum battery level.

3.16.1 Ni-Cd / Ni-Mh Charging Algorithm

To charge the battery, the algorithm measures battery level when the switch is open (T2) and charges the battery by closing the switch (T3). When the battery is charged (battery voltage reaches BattLevelMax) the switch is open for time T3.

Figure 6 : Ni-Cd / Ni-Mh charging waveform

Electrical Characteristics of Ni-Cd / Ni-Mh battery timing charge

Parameter	Min	Typ	Max	Unit
T1		1		s
T2		0.1		s
T3		5		s

Note: T1,T2,T3, and BattLevelMax may be configured by AT command.

The battery level is monitored by the software (but not the temperature)

3.16.2 Li-Ion Charging Algorithm

The Li-Ion algorithm provides battery temperature monitoring, which is highly recommended to prevent battery damage during the charging phase.

The Li-Ion charger algorithm may be configured into three phases:

1. Constant charge
2. Start of pulse charge
3. End of pulse charge

The three phases can be seen in the following waveform diagram for full-charging:

Figure 7: Li-Ion full-charging waveform

Electrical Characteristics of Li-Ion battery timing charge

Parameter		Min	Typ	Max	Unit
Step 1 switching	Closed		Always		s
Step 2 switching	Open		0.1		s
	Closed		1		s
Step 3 switching	Open	0.1		10	s
	Closed		1		s

3.16.3 Controlled Pre-charging Hardware

The pre-charging mode which is hardware controlled (but not the software controlled) is also available. This mode is only activated when the Wireless CPU is OFF and when VBATT is in the voltage range of $2.8V < VBATT < 3.2V$. The charger power supply must be connected to CHG-IN (pin 6,8). In pre-charging mode, the battery is charged with a direct current of 50mA. The FLASH-LED blinks, when this mode is activated.

This mode is not a real charging mode as it is not possible to obtain a full charge with it, but it is useful to save the battery life by preventing the battery from being discharged to below the low limit voltage value.

3.16.4 Temperature Monitoring

Temperature monitoring is only available for the Li-Ion battery with algorithm 1. The BAT-TEMP (pin 20) ADC input must be used to sample the temperature analog signal provided by an NTC temperature sensor. The minimum and maximum temperature range may be set by AT command.

Pin description of battery charging interface

Signal	Pin number	I/O	I/O type	Description
CHG-IN	6,8	I	Analog	Current source input
BAT-TEMP	20	I	Analog	A/D converter

Electrical characteristics of battery charging interface

Parameter		Minimum	Typ	Maximum	Unit
Charging operating temperature		0		50	°C
BAT-TEMP (pin 20)	Resolution		10		bits
	Sampling rate		216		S/s
	Input Impedance (R)		1M		Ω
	Input signal range	0		2	V
CHG-IN (pin 6, 8)	Voltage (for I=Imax)	4.6*			V
	Voltage (for I=0)			6*	V
	Current Imax			800	mA

* To be configured as specified by the battery manufacturer

3.17 ON / ~OFF Signal

This input is used to switch the Wireless CPU Quik Q2687 ON or OFF.

A high-level signal must be provided on the ON/~OFF pin to switch ON the Wireless CPU. The voltage of this signal must be maintained for a minimum of 3000ms. This signal may be left at high level until it is switched off.

To switch OFF the Wireless CPU, the ON/OFF pin must be released. The Wireless CPU may be switched off via the Operating System.

3.17.1 Operating Sequences

3.17.1.1 Power ON

Once the Wireless CPU is supplied, the application must set the ON/OFF signal to high to start the Wireless CPU power ON sequence. The ON/OFF signal must be held for 3000ms minimum. After this period, an internal mechanism keeps it on hold. During the power ON sequence, an internal reset is automatically performed by the Wireless CPU for 40ms (typical). During this phase, any external reset should be avoided. Once initialization is complete (timing is SIM- and network-dependent), the AT interface answers "OK" to the application. For further details, please check the AT Commands Interface Guide.

Wireless CPU Quik Q2687 Interfaces

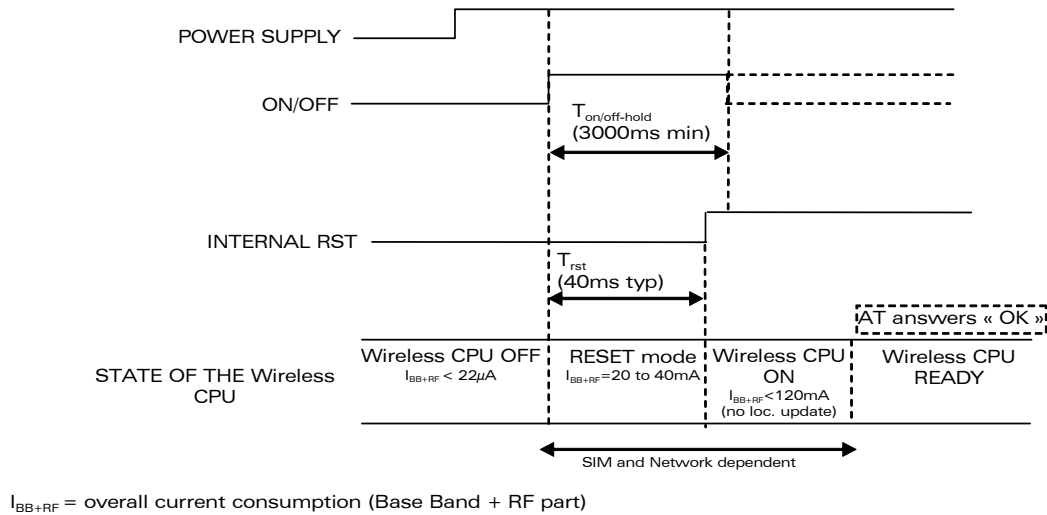

Figure 8 : Power-ON sequence (no PIN code activated)

3.17.1.2 Power OFF

To power OFF the Wireless CPU correctly, the application must set the ON/OFF signal to low and then send the AT+CPOF command to de-register from the network and switch OFF the Wireless CPU. Once the "OK" response is issued by the Wireless CPU, the power supply may be switched off.

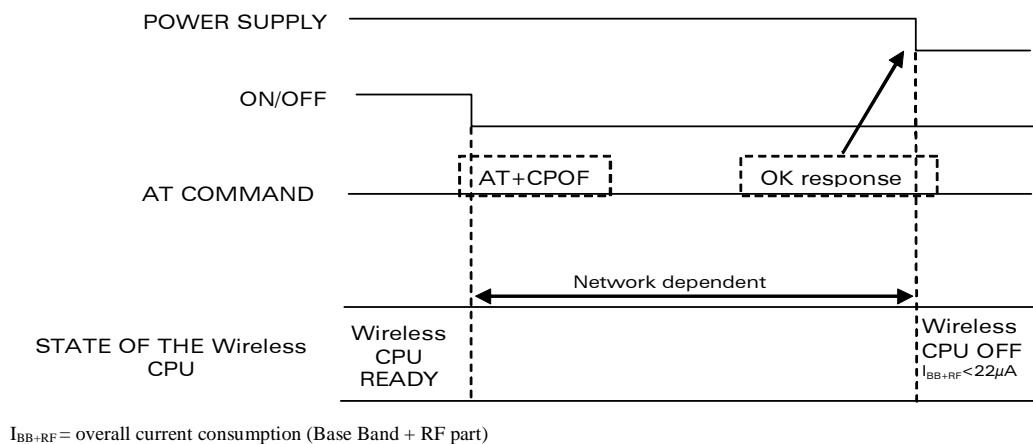

Figure 9 : Power-OFF sequence

Pin description

Signal	Pin number	I/O	I/O type	Description
ON/~OFF	19	I	CMOS	Wireless CPU Power ON

Electrical characteristics of the signal

Parameter	I/O type	Minimum	Maximum	Unit
V_{IL}	CMOS		$VBATT \times 0.2$	V
V_{IH}	CMOS	$VBATT \times 0.8$	$VBATT$	V

3.18 BOOT Signal

A specific BOOT control pin is available to download the Wireless CPU Quik Q2687 (only if the standard Xmodem download, controlled with AT command, is not possible).

A specific PC software program, provided by Wavecom, is needed to perform this specific download.

The BOOT pin must be connected to VCC_1V8 for this specific download.

Operating mode description

BOOT	Operating mode	Comment
Leave open	Normal use	No download
Leave open	Download XMODEM	AT command for Download AT+WDWL
1	Download specific	Need Wavecom PC software

For more information, see AT Commands Interface Guide for OS6.61 [4].

This BOOT pin must be left open for normal use or to download Xmodem.

However, in order to render the development and maintenance phases easier, it is **highly recommended** to set a test point, either a jumper or a switch on the VCC_1V8 (pin 5) power supply.

Pin description

Signal	Pin number	I/O	I/O type	Description
BOOT	16	I	1V8	Download mode selection

3.19 Reset Signal (~RESET)

This signal is used to force a reset procedure by providing low level for at least 200 μ s. This signal must be considered as an emergency reset only. A reset procedure is already driven by the internal hardware during the power-up sequence.

This signal may also be used to provide a reset to an external device (at power up only). If no external reset is necessary, this input may be left open. If used (emergency reset), it must be driven either by an open collector or an open drain.

The Wireless CPU remains in reset mode as long as the ~RESET signal is held low.

Caution

This signal should only be used for "emergency" resets.

An Operating System reset is preferred to a hardware reset.

Reset sequence:

To activate the "emergency" reset sequence, the ~RESET signal has to be set to low for 200 μ s minimum. Once the reset is completed, the AT interface answers "OK" to the application.

Figure 10: Reset sequence waveform

At power-up, the ~RESET time (R_t) is carried out after switching ON the Wireless CPU. It is generated by the internal voltage supervisor.

The ~RESET time is provided by the internal RC component. In order to keep the same time, avoid connecting another R or C component on the ~RESET signal. Only a switch or an open drain gate is recommended.

C_t is the cancellation time required for Wireless CPU initialization. C_t is automatically carried out by after hardware reset.

Electrical characteristics of the signal

Parameter	Minimum	Typ	Maximum	Unit
Input Impedance (R)*		330K		Ω
Input Impedance (C)		10n		F
~RESET time (Rt) ¹	200			μ s
~RESET time (Rt) ² at power up only	20	40	100	ms
Cancellation time (Ct)		34		ms
V _H	0.57			V
V _{IL}	0		0.57	V
V _{IH}	1.33			V

* Internal pull-up

* V_H: Hysterisis Voltage

1 This reset time is the minimum to be carried out on the ~RESET signal when the power supply is already stable.

2 This reset time is internally carried out by the Wireless CPU power supply supervisor only when the Wireless CPU power supplies are powered ON.

Pin description

Signal	Pin number	I/O	I/O type	Description
~RESET	18	I/O Open Drain	1V8	Wireless CPU Reset

3.20 External Interrupt

The Wireless CPU Quik Q2687 provides two external interrupt inputs. These interrupt inputs may be activated on:

- High to low edge
- Low to high edge
- Low to high and high to low edge
- Low level
- High level

When used, the interrupt inputs must not be left open.

If not used, they must be configured as GPIOs.

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
INT1	49	I	2V8	Z	External Interrupt	GPIO25
INT0	50	I	1V8	Z	External Interrupt	GPIO3

See Section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

Electrical characteristics of the signals

Parameter		Minimum	Maximum	Unit
INT1	V _{IL}		0.84	V
	V _{IH}	1.96		V
INT0	V _{IL}		0.54	V
	V _{IH}	1.33		V

3.21 VCC_2V8 and VCC_1V8 Output

These outputs may only be used to connect pull-up resistor. VCC_2V8 and VCC_1V8 must be used as a reference supply. These voltages supplies are available when the Wireless CPU is ON.

Pin description

Signal	Pin number	I/O	I/O type	Description
VCC_2V8	10	O	Supply	Digital supply
VCC_1V8	5	O	Supply	Digital supply

Electrical characteristics of the signals

Parameter		Minimum	Typ	Maximum	Unit
VCC_2V8	Output voltage	2.74	2.8	2.86	V
	Output Current			15	mA
VCC_1V8	Output voltage	1.76	1.8	1.94	V
	Output Current			15	mA

3.22 BAT-RTC (Back-up Battery)

The Wireless CPU Quik Q2687 provides an input/output to connect a Real Time Clock (RTC) power supply.

3.22.1 Interface Description

This pin is used as a back-up power supply for the internal Real Time Clock (RTC). The RTC is supported by the Wireless CPU when VBATT is available, but a back-up power supply is needed to save date and time when VBATT is switched off (VBATT = 0V).

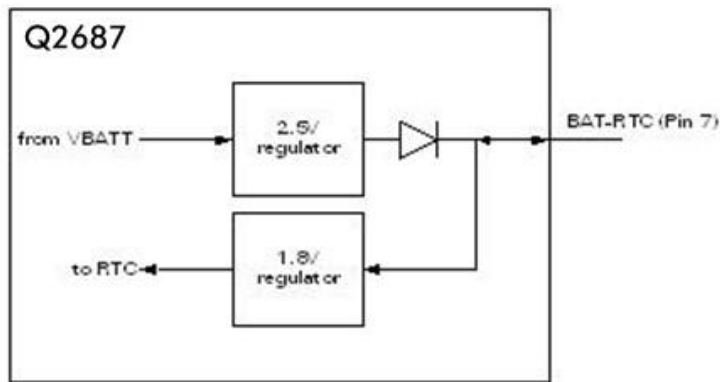

Figure 11: Real Time Clock power supply

If the RTC is not used, this pin may be left open.

If VBATT is available, the back-up battery may be charged by the internal 2.5V power supply regulator.

Pin description

Signal	Pin number	I/O	I/O type	Description
BAT-RTC	7	I/O	Supply	RTC Back-up supply

Electrical characteristics of the signal

Parameter	Minimum	Typ	Maximum	Unit
Input voltage	1.85		2.5	V
Input current consumption*	3.0	3.3	3.6	μ A
Output voltage	2.40	2.45	2.50	V
Output current			2	mA

*Provided by an RTC back-up battery when Wireless CPU power supply is OFF (VBATT = 0V).

3.23 FLASH-LED Signal

FLASH-LED is an open drain output. An LED and a resistor may be directly connected between this output and VBATT.

When the Q2687 Wireless CPU is OFF, if $2.8V < VBATT < 3.2V$ and a charger is connected on CHG-IN inputs, this output flashes (100 ms ON, 900 ms OFF) to indicate the pre-charging phase of the battery.

When the Q2687 Wireless CPU is ON, this output is used to indicate network status.

FLASH-LED status

Q2687 state	VBATT status	FLASH-LED status	Wireless CPU Quik Q2687 status
Wireless CPU OFF	VBATT < 2.8V or VBATT > 3.2V	OFF	Wireless CPU is OFF
	2.8V < VBATT < 3.2V	Pre-charge flash LED ON for 100 ms, OFF for 900 ms	Wireless CPU is OFF, Pre-charging mode (charger must be connected on CHG-IN to activate this mode)
Wireless CPU ON	VBATT > 3.2V	Permanent	Wireless CPU switched ON, not registered on the network
		Slow flash LED ON for 200 ms, OFF for 2 s	Wireless CPU switched ON, registered on the network
		Quick flash LED ON for 200 ms, OFF for 600 ms	Wireless CPU switched ON, registered on the network, communication in progress
		Very quick flash LED ON for 100ms, OFF for 200ms	Wireless CPU switched ON, software downloaded is either corrupted or non-compatible ("BAD SOFTWARE")

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description
FLASH-LED	17	O	Open Drain Output	1 and Undefined	LED driving

See Section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

Figure 12: FLASH-LED state during RESET and Initialization time

FLASH-LED state is high during the RESET time and undefined during the software initialization time. During software initialization time, for 2 seconds max after RESET cancellation, the FLASH-LED signal is toggling and does not provide Wireless CPU status. After the 2s period, the FLASH-LED provides the true status of the Wireless CPU.

Electrical characteristics of the signal

Parameter	Condition	Minimum	Typ	Maximum	Unit
V _{OL}				0.4	V
I _{OUT}				8	mA

3.24 Digital Audio Interface (PCM)

Digital audio interface (PCM) mode allows connectivity with audio standard peripherals. It may be used, for example, to connect an external audio codec.

The programmability of this mode allows to address a large range of audio peripherals.

PCM features:

- IOM-2 compatible device on physical level
- Master mode only with 6 slots by frame, user only on slot 0
- Bit rate single clock mode at 768KHz only
- 16 bits data word MSB first only
- Linear Law only (no compression law)
- Long Frame Synchronization only
- Push-pull configuration on PCM-OUT and PCM-IN

The digital audio interface configuration cannot differ from the above specified features.

3.24.1 Description

The PCM interface consists of 4 wires:

- **PCM-SYNC** (output): The frame synchronization signal delivers an 8KHz frequency pulse that synchronizes the frame data in and the frame data out.
- **PCM-CLK** (output): The frame bit clock signal controls data transfer with the audio peripheral.
- **PCM-OUT** (output): The frame "data out" relies on the selected configuration mode.
- **PCM-IN** (input): The frame "data in" relies on the selected configuration mode.

Wireless CPU Quik Q2687 Interfaces

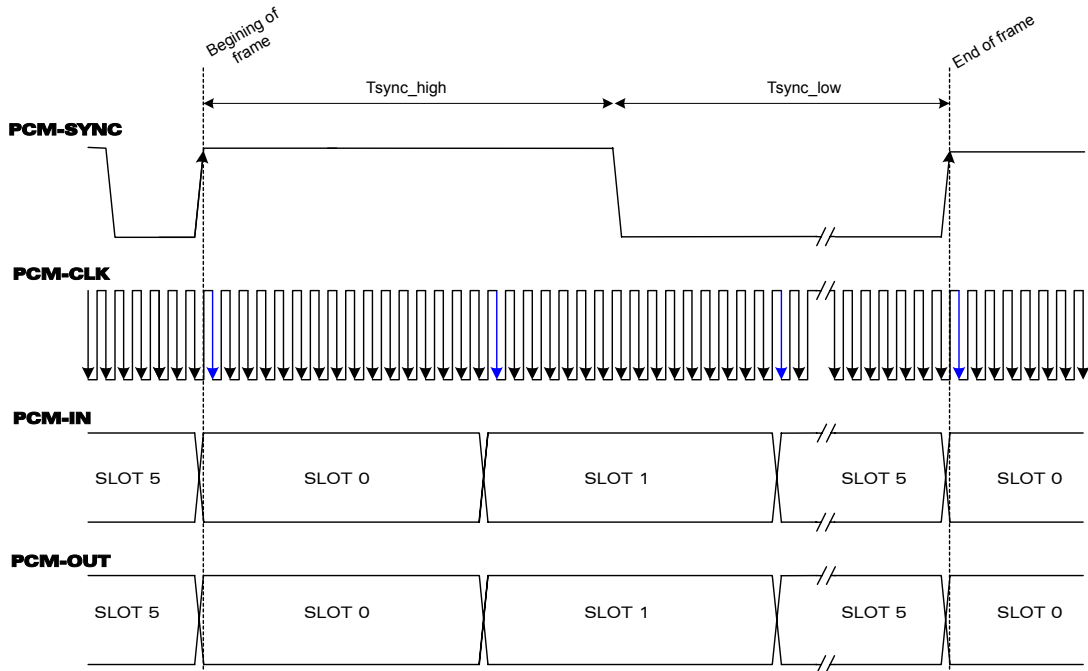

Figure 13: PCM frame waveform

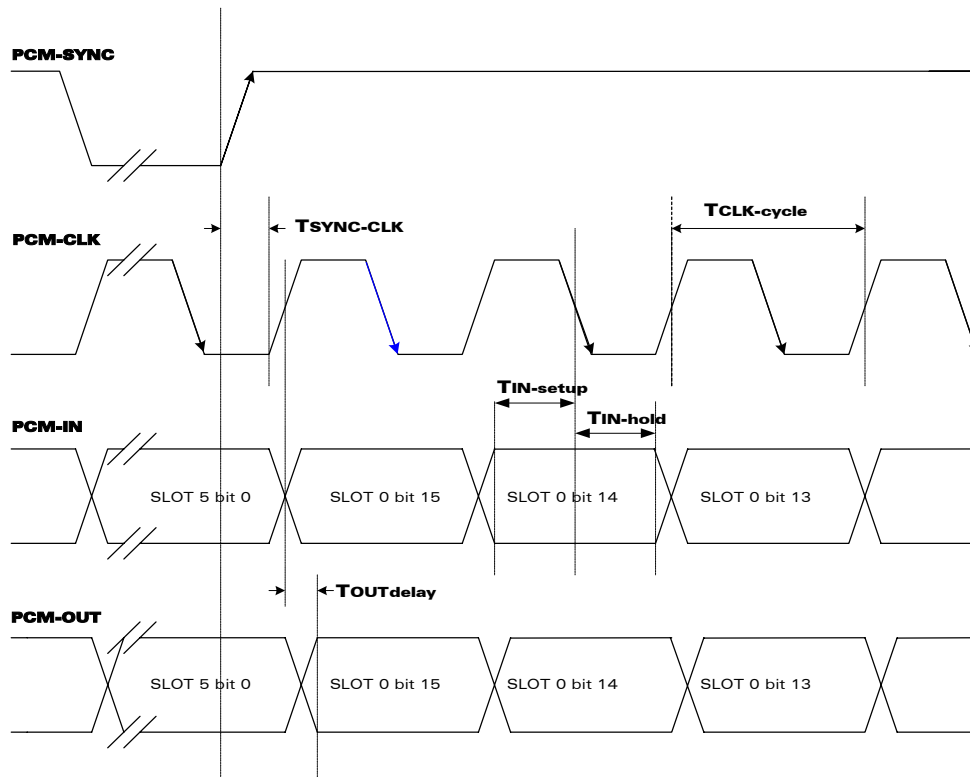

Figure 14: PCM sampling waveform

AC characteristics

Signal	Description	Minimum	Typ	Maximum	Unit
$T_{sync_low} + T_{sync_high}$	PCM-SYNC period		125		μs
T_{sync_low}	PCM-SYNC low time		93		μs
T_{sync_high}	PCM-SYNC high time		32		μs
$T_{SYNC-CLK}$	PCM-SYNC to PCM-CLK time		-154		Ns
$T_{CLK-cycle}$	PCM-CLK period		1302		Ns
$T_{IN-setup}$	PCM-IN setup time	50			Ns
$T_{IN-hold}$	PCM-IN hold time	50			Ns
$T_{OUT-delay}$	PCM-OUT delay time			20	Ns

Pin description of the PCM interface

Signal	Pin number	I/O	I/O type	Reset state	Description
PCM-SYNC	77	O	1V8	Pull-down	Frame synchronization 8Khz
PCM-CLK	79	O	1V8	Pull-down	Data clock
PCM-OUT	80	O	1V8	Pull-up	Data output
PCM-IN	78	I	1V8	Pull-up	Data input

See Section 3.3, "Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and Reset state definition.

3.25 USB 2.0 Interface

A 4-wire USB slave interface is available that complies with USB 2.0 protocol signaling. But it is not compliant with the electrical interface, due to the 5V of VPAD-USB.

The USB interface signals are VPAD-USB, USB-DP, USB-DM, and GND.

USB interface features:

- 12Mbit/s full-speed transfer rate
- 3.3V typ compatible
- USB Softconnect feature
- Download feature is not supported by USB
- CDC 1.1 – ACM compliant

Note:

A 5V to 3.3V typ voltage regulator is needed between the external interface power inline (+5V) and the Wireless CPU line (VPAD-USB).

Pin description of the USB interface

Signal	Pin number	I/O	I/O type	Description
VPAD-USB	52	I	VPAD_USB	USB Power Supply
USB-DP	54	I/O	VPAD_USB	Differential data interface positive
USB-DM	56	I/O	VPAD_USB	Differential data interface negative

Electrical characteristics of the signals

Parameter	Min	Typ	Max	Unit
VPAD-USB, USB-DP, USB-DM	3	3.3	3.6	V

3.26 RF Interface

The impedance is 50 Ohms nominal and the DC impedance is 0 Ohm.

3.26.1 RF Connections

U.FL Connector

A wide variety of cables fitted with U.FL connectors is offered by different suppliers.

Soldered solution

The soldered solution will preferably be based on an RG178 coaxial cable.

IMP connector

This connector is dedicated to board-to-board applications and must be soldered on the customer board. The supplier is Radiall (reference: R107 064 900).

Notes:

- The Wireless CPU Quik Q2687 does not support an antenna switch for a car kit but this function may be implemented externally and may be driven using a GPIO.
- The antenna cable and connector should be selected in order to minimize losses in the frequency bands used for GSM 850/900MHz and 1800/1900MHz.
- 0.5dB may be considered as the maximum value of loss between the Wireless CPU and an external connector.
- For mounting, assembling and handling of the IMP connector, contact the supplier, Radiall, directly. Wavecom may not provide customer support for use of this connector.

3.26.2 RF Performance

RF performance is compliant with the ETSI GSM 05.05 recommendation.

The main Receiver parameters are:

- GSM850 Reference Sensitivity = -104 dBm Static & TUHigh
- E-GSM900 Reference Sensitivity = -104 dBm Static & TUHigh
- DCS1800 Reference Sensitivity = -102 dBm Static & TUHigh
- PCS1900 Reference Sensitivity = -102 dBm Static & TUHigh
- Selectivity @ 200 kHz: > +9 dBc

Wireless CPU Quik Q2687

Interfaces

- Selectivity @ 400 kHz: > +41 dBc
- Linear dynamic range: 63 dB
- Co-channel rejection: >= 9 dBc

Transmitter parameters:

- Maximum output power (EGSM & GSM850): 33 dBm +/- 2 dB at ambient temperature
- Maximum output power (GSM1800 & PCS1900): 30 dBm +/- 2 dB at ambient temperature
- Minimum output power (EGSM & GSM850): 5 dBm +/- 5 dB at ambient temperature
- Minimum output power (GSM1800 & PCS1900): 0 dBm +/- 5 dB at ambient temperature

3.26.3 Antenna Specifications

The antenna must meet the following requirements as specified in the table below:

- The optimum operating frequency depends on the application. Either a dual-band or a quad-band antenna may operate in these frequency bands and must have the following characteristics:

Characteristic	Q2687			
	E-GSM 900	DCS 1800	GSM 850	PCS 1900
TX Frequency	880 to 915 MHz	1710 to 1785 MHz	824 to 849 MHz	1850 to 1910 MHz
RX Frequency	925 to 960 MHz	1805 to 1880 MHz	869 to 894 MHz	1930 to 1990 MHz
Impedance	50 Ohms			
VSWR	Rx max	1.5:1		
	Tx max	1.5:1		
Typical radiated gain	0dBi in one direction at least			

Wireless CPU Quik Q2687

Interfaces

Caution: Q2687 and Q2686 are compatible, nevertheless, if intends to use Q2686 be careful on these specific differences

* The I/O direction information is only for the nominal signal. When the signal is configured in GPIO, it can always be an Input or an Output.

** For more information about the multiplexing of these signals, see "General purpose input/output", Section 1.1

4.2 Environmental Specifications

Wavecom specifies the following temperature range for the Q2687 product.

The Q2687 Wireless CPU is compliant with the following operating class.

Conditions	Temperature range
Operating / Class A	-20 °C to +55°C
Operating / Storage / Class B	-40 °C to +85°C

Function Status Classification:

Class A:

The Wireless CPU remains fully functional, meeting GSM performance criteria in accordance with ETSI requirements, across the specified temperature range.

Class B:

The Wireless CPU remains fully functional, across the specified temperature range. Some GSM parameters may occasionally deviate from the ETSI specified requirements and this deviation does not affect the ability of the Wireless CPU to connect to the cellular network and fully functional, as it does within the Class A range.

Wireless CPU Quik Q2687

4.3 Mechanical specifications

4.3.1 Physical Characteristics

The Wireless CPU Quik Q2687 has a complete self-contained shield.

- Overall dimensions : 32.2x40x4 mm (except shielding pins)
- Weight : <10 g

4.3.2 Mechanical Drawings

The mechanical specifications of the Wireless CPU Quik Q2687 are shown on the following page.

5 Connector and Peripheral Device References

5.1 General Purpose Connector

The GPC is a 100-pin connector with 0.5mm pitch from the PANASONIC Group's P5K series, with the following reference:

AXK69510002

The matting connector has the following reference:

AXK59510001

The stacking height is 3.0 mm.

Wavecom recommends that you use the **AXK59510001** connector for your application to benefit from Wavecom's prices. For more information, contact Wavecom, specifying the Wavecom connector reference: **WM17077**.

For further details see the GPC data sheets in the Appendix. More information is also available from <http://www.panasonic.com/host/industrl.html>

5.2 SIM Card Reader

- ITT CANNON CCM03 series (see <http://www.ittcannon.com>)
- AMPHENOL C707 series (see <http://www.amphenol.com>)
- JAE (see <http://www.jae.com>)
- MOLEX 99228-0002 (connector) / MOLEX 91236-0002 (holder) (see <http://www.molex.com>)

5.3 Microphone

Possible suppliers:

- HOSIDEN
- PANASONIC
- PEIKER

Wireless CPU Quik Q2687 Connector and Peripheral Device References

5.4 Speaker

Possible suppliers:

- SANYO
- HOSIDEN
- PRIMO
- PHILIPS

5.5 Antenna Cable

A wide variety of cables fitted with UF-L connectors is offered by HIROSE:

- UF-L pigtails, Ex: Ref = **U.FL-2LP(V)-04-A-(100)**
- UF-L Ref = **U.FL-R-SMT**
- UF-L cable assemblies,
- Between series cable assemblies.

More information is also available from <http://www.hirose-connectors.com/>.

A coaxial cable may also be soldered on the RF pad. The following references have been certified for mounting on the Q2687 Wireless CPU:

- RG178
- RG316

5.6 RF board-to-board Connector

The supplier for the IMP connector is Radiall (<http://www.radiall.com>), with the following reference:

- R107 064 900.

5.7 GSM Antenna

GSM antennas and support for antenna adaptation may be obtained from manufacturers such as:

- ALLGON (<http://www.allgon.com>)
- IRSCHMANN (<http://www.hirschmann.com/>)

6 Design Guidelines

The purpose of the following paragraphs is to give design guidelines.

6.1 Hardware and RF

6.1.1 EMC Recommendations

The EMC tests must be performed on the application as soon as possible to detect any potential problems.

When designing, special attention should be paid to:

- Possible spurious emission radiated by the application to the RF receiver in the receiver band
- ESD protection **is mandatory** on all signals which have external accessibility (typically human accessibility). See Q2687 Wireless CPU Customer Design Guidelines WM_DEV_Q2687_PTS_007 [2] for ESD protection samples.
 - Similarly, ESD protection is mandatory for the:
 - SIM (if accessible from outside)
 - Serial link
- EMC protection on audio input/output (filters against 900MHz emissions)
- Biasing of the microphone inputs
- Length of the SIM interface lines (preferably <10cm)
- Ground plane: Wavecom recommends a common ground plane for analog/digital/RF grounds.
- A metallic case or plastic casing with conductive paint are recommended

Note:

The Wireless CPU does not include any protection against over-voltage.

6.1.2 Power Supply

The power supply is one of the key issues in the design of a GSM terminal.

A weak power supply design could, in particular, affect:

- EMC performance
- The emission spectrum
- The phase error and frequency error

Wireless CPU Quik Q2687 Design Guidelines

Warning:

Careful attention should be paid to:

The quality of the power supply: low ripple, PFM or PSM systems should be avoided (PWM converter preferred).

Capacity to deliver high current peaks in a short time (pulsed radio emission).

6.1.3 Layout Requirement

CHIPS & BORING DIAMETER

of the WISMO QUIK mechanical insertion pins

CASE N 1

To be used in priority

CASE N 2

on specific request

Tolerance +/- 0.1mm
1.00 mm reamer

CASE N 3

Other

THERMAL BRAKES DEFINITION

Figure 16: Layout requirement

6.1.4 Antenna

Warning:

Wavecom strongly recommends to work with an antenna manufacturer either to develop an antenna adapted to the application or to adapt an existing solution to the application.

Both the mechanical and electrical antenna adaptation are one of the key issues in the design of GSM terminal.

6.2 Mechanical Integration

Attention should be paid to:

- Antenna cable integration (bending, length, position, etc)
- Leads of the Wireless CPU to be soldered to the Ground plane

6.3 Operating System Upgrade

The Wireless CPU Quik Q2687 Operating System is stored in flash memory and may easily be upgraded.

IMPORTANT:

In order to follow regular changes in the GPRS standard and to offer a state-of-the-art Operating System, Wavecom recommends that the application designed around a WISMO (or WISMO based product) allow easy Operating System upgrades on the Wireless CPU via the standard Xmodem protocol. Therefore, the application shall either allow a direct access to the WISMO serial link through an external connector or implement any mechanism allowing the WISMO Operating System to be downloaded via Xmodem.

The Operating System file may be downloaded to the Wireless CPU using the Xmodem protocol. The AT+WDWL command allows the download process to be launched (see the description in the AT Command User Guide).

The serial signals required to proceed with Xmodem downloading are:

Rx, Tx, RTS, CTS and GND.

The Operating System file may also be downloaded to the Wireless CPU using the DOTA (download over the air) feature. This feature is available with the Open AT[®] interface. For more details, please, refer to the Open AT[®] documentation.

7 Appendix

7.1 Standards and Recommendations

GSM ETSI, 3GPP, GCF and NAPRD03 recommendations for Phase II & FCC.

GSM 09.07 V8.0.0 (1999-08)	Digital cellular telecommunications system (Phase 2+); General requirements on interworking between the Public Land Mobile Network (PLMN) and the Integrated Services Digital Network (ISDN) or Public Switched Telephone Network (PSTN) (GSM 09.07 version 8.0.0 Release 1999)
3GPP TS 51.010-1 v5.0.0 (2002-09)	Technical Specification Group GSM/EDGE ; Radio Access Network ;Digital cellular telecommunications system (Phase 2+);Mobile Station (MS) conformance specification; Part 1: Conformance specification (Release 5)
3GPP TS 51.011 V5.0.0 (2001-12)	Technical Specification Group Terminals; Specification of the Subscriber Identity Module - Mobile Equipment (SIM - ME) interface (Release 5)
ETS 300 641 (1998-03)	Digital cellular telecommunications system (Phase 2); Specification of the 3 Volt Subscriber Identity Module - Mobile Equipment (SIM-ME) interface (GSM 11.12 version 4.3.1)

Wireless CPU Quik Q2687

Appendix

Specification Reference	Title
GCF-CC V3.7.1 (2002-08)	Global Certification Forum – Certification criteria
NAPRD03 V2.6.0 (2002-06)	North America Permanent Reference Document for PTCRB tests

The Wireless CPU Quik Q2687 connected on a development kit board application is certified to be in accordance with the following Rules and Regulations of the Federal Communications Commission (FCC).

Power listed on the Gant is conducted for Part 22 and conducted for Part 24

This device contains GSM, GPRS/EGPRS Class 10 functions in the 900 and 1800MHz Band, which are not operational in U.S. Territories.

This device is to be used only for mobile and fixed applications. The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

Users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance.

Antennas used for this OEM module must not exceed 1.4 dBi gain for GSM 850 MHz and 7 dBi for GSM 1900 MHz for fixed operating configurations. For mobile operations the gain must not exceed 1.4 dBi for GSM 850 MHz and 3dBi for GSM 1900 MHz. This device is approved as a module to be installed in other devices.

Installed in portable devices, the RF exposure condition requires a separate mandatory equipment authorization for the final device.

The license module will have a FCC ID label on the module itself. The FCC ID label must be visible through a window or it must be visible when an access panel, door or cover is easily removed.

If not, a second label must be placed on the outside of the device that contains the following text:

Contains FCC ID: O9EQ2687

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- o This device may not cause harmful interference.
- o This device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT:

Manufacturers of mobile or fixed devices incorporating Q2687 Wireless CPU are advised to:

- clarify any regulatory questions,
- have their completed product tested,
- have product approved for FCC compliance, and
- include instructions according to above mentioned RF exposure statements in end product user manual.

Please note that changes or modifications not stated clearly approved by the party responsible for compliance could void the user's authority to operate the equipment.

7.2 Safety Recommendations (for Information only)

IMPORTANT
FOR THE EFFICIENT AND SAFE OPERATION OF YOUR GSM APPLICATION
BASED ON WIRELESS CPU QUIK Q2687
PLEASE READ THIS INFORMATION CAREFULLY

7.2.1 RF Safety

7.2.1.1 General

Your GSM terminal¹ is based on the GSM standard for cellular technology. The GSM standard is spread all over the world. It covers Europe, Asia and some parts of America and Africa. This is the most used telecommunication standard.

Your GSM terminal is actually a low power radio transmitter and receiver. It sends out as well as receives radio frequency energy. When you use your GSM application, the cellular system which handles your calls controls both the radio frequency and the power level of your cellular modem.

7.2.1.2 Exposure to RF energy

There has been some public concern about possible health effects of using GSM terminals. Although research on health effects from RF energy has focused on the current RF technology for many years, scientists have begun research regarding newer radio technologies, such as GSM. After existing research had been reviewed, and after compliance to all applicable safety standards had been tested, it has been concluded that the product was fitted for use.

If you are concerned about exposure to RF energy there are things you can do to minimize exposure. Obviously, limiting the duration of your calls will reduce your

¹ based on WISMO2D

exposure to RF energy. In addition, you can reduce RF exposure by operating your cellular terminal efficiently by following the guidelines below.

7.2.1.3 Efficient Terminal Operation

For your GSM terminal to operate at the lowest power level, consistent with satisfactory call quality:

If your terminal has an extendable antenna, extend it fully. Some models allow you to place a call with the antenna retracted. However, your GSM terminal operates more efficiently with the antenna when it is fully extended.

Do not hold the antenna when the terminal is "IN USE". Holding the antenna affects call quality and may cause the modem to operate at a higher power level than needed.

7.2.1.4 Antenna Care and Replacement

Do not use the GSM terminal with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Replace the damaged antenna immediately. You may repair antenna yourself by following the instruction manual provided to you. If so, use only a manufacturer-approved antenna. Otherwise, have your antenna repaired by a qualified technician.

Buy or replace the antenna only from the approved suppliers list. Using of unauthorized antennas, modifications or attachments could damage the terminal and may violate local RF emission regulations or invalidate type approval.

7.2.2 General Safety

7.2.2.1 Driving

Check the laws and the regulations regarding the use of cellular devices in the area where you have to drive, as you always have to comply with them. When using your GSM terminal while driving, please:

- give full attention to driving,
- pull-off the road and park before making or answering a call (if driving conditions so require).

7.2.2.2 Electronic Devices

Most electronic equipments, for example in hospitals and motor vehicles are shielded from RF energy. However, RF energy may affect some improperly shielded electronic equipment.

7.2.2.3 Vehicle Electronic Equipment

Check your vehicle manufacturer representative to determine if any on-board electronic equipment is adequately shielded from RF energy.

7.2.2.4 Medical Electronic Equipment

Consult the manufacturer of any personal medical devices (such as pacemakers, hearing aids, etc...) to determine if they are adequately shielded from external RF energy.

Turn your terminal **OFF** in health care facilities when any regulations posted in the area instruct you to do so. Hospitals or health care facilities may be using RF monitoring equipment.

7.2.2.5 Aircraft

Turn your terminal **OFF** before boarding any aircraft.

- Use it on the ground only with crew permission.
- Do not use it in the air.

To prevent possible interference with aircraft systems, Federal Aviation Administration (FAA) regulations require you to have prior permission from the crew members to use your terminal while the aircraft is on the ground. In order to prevent interference with cellular systems, local RF regulations prohibit using your modem, while airborne.

7.2.2.6 Children

Do not allow children to play with your GSM terminal. It is not a toy. Children could hurt themselves or others (by poking themselves or others in the eye with the antenna, for example). Children could damage the modem, or make calls that increase your modem bills.

7.2.2.7 Blasting Areas

To avoid interfering with blasting operations, turn your unit **OFF** when in a "blasting area" or in areas posted: "turn off two-way radio". Construction crew often uses remote control RF devices to set off explosives.

7.2.2.8 Potentially Explosive Atmospheres

Turn your terminal **OFF** when in any area with a potentially explosive atmosphere. It is rare, but your modem or its accessories could generate sparks. Sparks in such areas could cause an explosion or fire resulting in bodily injuries or even death.

Areas with a potentially explosive atmosphere are often, but not always, clearly marked. They include fuelling areas such as petrol stations; below decks on boats;

Wireless CPU Quik Q2687

Appendix

fuel or chemical transfer or storage facilities; and areas where the air contains chemicals or particles, such as grain, dust, or metal powders.

Do not transport or store flammable gas, liquid, or explosives, in the compartment of your vehicle which contains your terminal or accessories.

Before using your terminal in a vehicle powered by liquefied petroleum gas (such as propane or butane) ensure that the vehicle complies with the relevant fire and safety regulations of the country in which the vehicle is to be used.
