Power indicator: Green LED

Slide switch control power on/off

2 Channel Select : Slide Switch

3 Mode of Operation: Night Light (Off/Auto/On): Slide Switch

Technical description:

In the VOX mode, that is, no voice activated, the Baby's Unit sends the pilot tone at 0.5 second for each 5 seconds time interval in order that the Parent's Unit may distinguish whether the Baby's Unit is in the proper range. When activated by the voice, it transmits the voice and the pilot tone continuously so that the Parent's Unit may unmute the speaker and pick up the sound that are transmitted from the Baby's Unit. In addition, the night light automatically provides a soothing glow in a dark nursery under the condition of power adapter is used and the slide switch is on AUTO position.

For more details about the monitor, please refer to schematic diagram for the Baby's Unit.
