Attestation LMA & Integration Manual

The new Grantee **Ott Hydromet GmbH** confirms that the purpose of this
FCC Change In Identification is to use this RF Module only by himself in own final
host devices and that this RF Module is not intended for sale to the public or OEM
others than the grantee himself.
The application will be therefore changed to Limited Single Modular Approval.

The new Grantee **Ott Hydromet GmbH** has received the permission from the
original Grantee to use their integration manual entitled "BlueMod+S50 Hardware
User Guide 1VV0301505 Rev.1 – 2018-03-12" as it includes in addition to the
installation instructions also details on the approved antenna trace design and
approved antenna(s).

The Grantee **Ott Hydromet GmbH** is aware, that this RF Module must be labelled
with the new FCC ID: OA6-S50 and that the final host device that integrates this
Module has to be labelled "Contains FCC ID: OA6-S50" after the compliance of the
entire host device with the integrated & operating RF Module has been assured.

The final host device, into which this modular approved transmitter is finally
integrated must comply itself to the appropriate technical requirements (typically
§15.107 AC Powerline Conducted Limits when connected to the public AC Power
lines and §15.109 Radiated Emission Limits for an Unintentional Radiator) and apply
applicable FCC Equipment Authorization Procedures (SDoC or Certification) if not
exempted under §15.103.

This modular approved transmitter is tested and certified as stand-alone device under
FCC §15.247 "Operation within the bands 902-928 MHz, 2400-2483.5 MHz, and
5725-5850 MHz". When the module is integrated into a final host device, the
integrator must repeat the Fundamental (EIRP) and Out-of-Band Emission
measurements of one operating channel to assure further compliance with the FCC
requirements of the module when operating inside the host device.

Sincerely,

Authorized Agent
