

## TEST REPORT

Test report no.: 1-0924/20-01-02

### Testing laboratory

**CTC advanced GmbH**

Untertuerkheimer Strasse 6 – 10

66117 Saarbruecken / Germany

Phone: + 49 681 5 98 - 0

Fax: + 49 681 5 98 - 9075

Internet: <http://www.ctcadvanced.com>

e-mail: [mail@ctcadvanced.com](mailto:mail@ctcadvanced.com)

**Accredited Testing Laboratory:**

The testing laboratory (area of testing) is accredited according to DIN EN ISO/IEC 17025 (2005) by the Deutsche Akkreditierungsstelle GmbH (DAkkS)

The accreditation is valid for the scope of testing procedures as stated in the accreditation certificate with the registration number: D-PL-12076-01-03

### Applicant

**ADC Automotive Distance Control Systems GmbH**

Peter-Dornier-Str. 10

88131 Lindau / GERMANY

Phone: +49 (0)8382-96990

Contact: Thomas Reitmayer

e-mail: [Thomas.Reitmayer@continental-corporation.com](mailto:Thomas.Reitmayer@continental-corporation.com)

Phone: +49 (0)8382-96990

### Manufacturer

**ADC Automotive Distance Control Systems GmbH**

Peter-Dornier-Str. 10

88131 Lindau / GERMANY

### Test standard/s

CFR 47 Part 95,  
Subpart M

The 76-81 GHz Band Radar Service

RSS-251, Issue 1

Field Disturbance Sensors in the Bands 46.7-46.9 GHz (Vehicular Radar) and 76-77 GHz (Vehicular and Airport Fixed Radar)

RSS-GEN, Issue 4,  
Amendment 1

General Requirements for Compliance of Radio Apparatus

For further applied test standards please refer to section 3 of this test report.

### Test Item

**Kind of test item:** SRD for RTTT and other vehicle or fixed installation

**Type:** ARS5-B

**FCC ID:** OAYARS5B

**IC:** 4135A-ARS5B

Frequency: 76.0 – 77.0 GHz

Antenna: Integrated patch antenna

Power supply: 8.65 V to 16.4 V DC by Battery

Temperature range: -40°C to +85°C

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

### Test report authorized:

Thomas Vogler  
Lab Manager  
Radio Communications & EMC

### Test performed:

Sebastian Janoschka  
Lab Manager  
Radio Communications & EMC

## 2 General information

### 2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. CTC advanced GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CTC advanced GmbH.

The testing service provided by CTC advanced GmbH has been rendered under the current "General Terms and Conditions for CTC advanced GmbH".

CTC advanced GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CTC advanced GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CTC advanced GmbH test report include or imply any product or service warranties from CTC advanced GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CTC advanced GmbH.

All rights and remedies regarding vendor's products and services for which CTC advanced GmbH has prepared this test report shall be provided by the party offering such products or services and not by CTC advanced GmbH. In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

### 2.2 Application details

Date of receipt of order:	2020-08-26
Date of receipt of test item:	2020-09-02
Start of test:	2020-09-03
End of test:	2020-09-15
Person(s) present during the test:	-/-

Power supply	:	$V_{nom}$ 13.4 V DC by external power supply $V_{max}$ -/- V $V_{min}$ -/- V

## 5 Test item

### 5.1 General description

<b>Kind of test item</b>	:	SRD for RTTT and other vehicle or fixed installation
<b>Type</b>	:	ARS5-B
<b>Other model / variant identifiers</b>	:	ARS 510
<b>HMN</b>	:	N/A
<b>PMN</b>	:	ARS510
<b>HVIN</b>	:	ARS5-B
<b>FVIN</b>	:	RHC_12.00.08
<b>S/N serial number</b>	:	A2C75583705
<b>HW hardware status</b>	:	C2
<b>SW software status</b>	:	40.13_INT-11+
<b>Frequency band</b>	:	76.0 – 77.0 GHz
<b>Type of modulation</b>	:	FMCW
<b>Number of modes</b>	:	9
<b>Antenna</b>	:	Integrated patch antenna
<b>Power supply</b>	:	8.65 V to 16.4 V DC by Battery
<b>Temperature range</b>	:	-40°C to +85°C

### 5.2 Additional information

Operating modes as declared by manufacturer:

Mode	f <sub>center</sub> [GHz]	vego [km/h]	bandwidth [MHz]
1	76.250	>115	168.4
2	76.200	>115	168.4
3	76.300	>115	168.4
5	76.250	65 ... 110	234.9
6	76.200	65 ... 110	234.9
7	76.300	65 ... 110	234.9
9	76.250	≤60	407.9
9(b)	76.225	≤60	407.9
160	76.360	EOL	650.9

The content of the following annexes is defined in the QA. It may be that not all of the listed annexes are necessary for this report, thus some values in between may be missing.

Test setup- and EUT-photos are included in test report:

1-0924/20-01-01\_AnnexA  
 1-2461/16-04-01\_AnnexB  
 1-0924/20-01-01\_AnnexD

## 6 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

### **Agenda:** Kind of Calibration

k	calibration / calibrated	EK	limited calibration
ne	not required (k, ev, izw, zw not required)	zw	cyclical maintenance (external cyclical maintenance)
ev	periodic self verification	izw	internal cyclical maintenance
Ve	long-term stability recognized	g	blocked for accredited testing
vlk!	Attention: extended calibration interval		
NK!	Attention: not calibrated	*)	next calibration ordered / currently in progress

## 6.1 Shielded semi anechoic chamber

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 30 MHz to 1 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are conform to specifications ANSI C63. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analyzers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.

Measurement distance: tri-log antenna 10 meter

$$FS = UR + CL + AF$$

(FS-field strength; UR-voltage at the receiver; CL-loss of the cable; AF-antenna factor)

Example calculation:

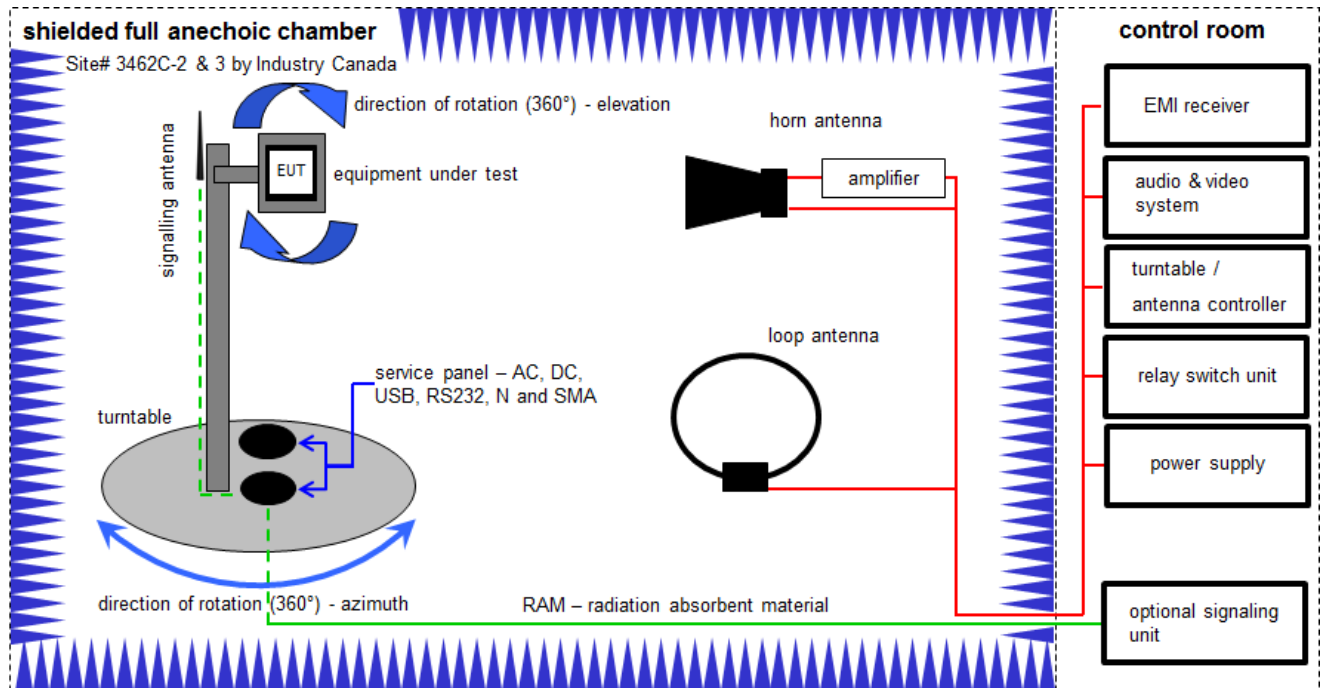

$$FS [dB\mu V/m] = 12.35 [dB\mu V/m] + 1.90 [dB] + 16.80 [dB/m] = 31.05 [dB\mu V/m] (35.69 \mu V/m)$$

**Equipment table:**

## 6.2 Shielded fully anechoic chamber

Measurement distance: horn antenna 3 meter; loop antenna 3 meter / 1 meter

$$FS = UR + CA + AF$$

(FS-field strength; UR-voltage at the receiver; CA-loss of the signal path; AF-antenna factor)

Example calculation:

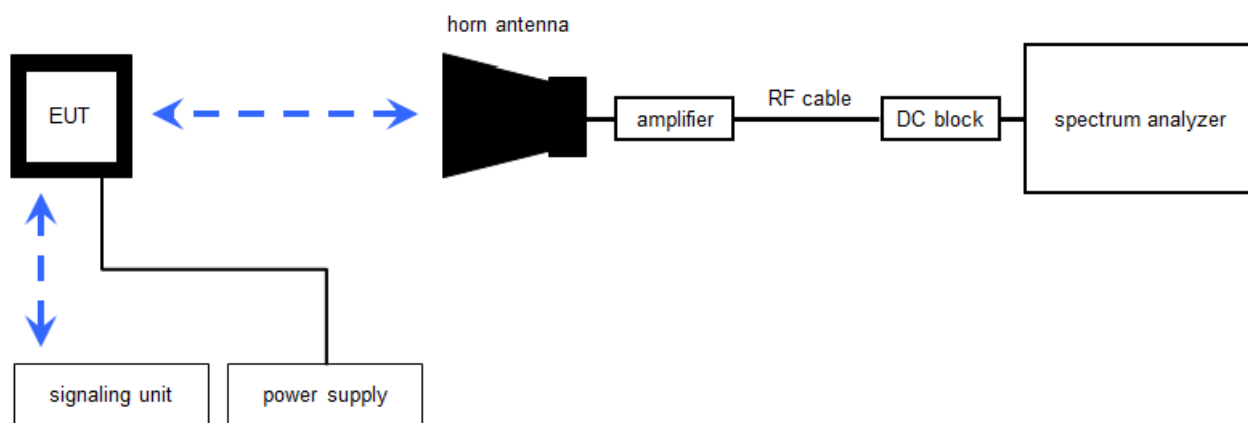

$$FS [dB\mu V/m] = 40.0 [dB\mu V/m] + (-35.8) [dB] + 32.9 [dB/m] = 37.1 [dB\mu V/m] (71.61 \mu V/m)$$

### 6.3 Radiated measurements > 18 GHz

#### Radiated measurements > 18 GHz

### 6.4 Radiated measurements > 50/85 GHz

#### Radiated measurements RF laboratory

$$OP = AV + D - G$$

(OP-rad. output power; AV-analyzer value; D-free field attenuation of measurement distance; G-antenna gain)

#### Example calculation:

$$OP \text{ [dBm]} = -54.0 \text{ [dBm]} + 64.0 \text{ [dB]} - 20.0 \text{ [dBi]} = -10 \text{ [dBm]} \text{ (100 } \mu\text{W)}$$

Note: conversion loss of mixer is already included in analyzer value.

## 7 Sequence of testing

### 7.1 Sequence of testing radiated spurious 9 kHz to 30 MHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, it is placed on a table with 0.8 m height.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) – see test details.
- EUT is set into operation.

#### Premeasurement\*

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna height is 1 m.
- At each turntable position the analyzer sweeps with positive-peak detector to find the maximum of all emissions.

#### Final measurement

- Identified emissions during the pre-measurement are maximized by the software by rotating the turntable from 0° to 360°.
- Loop antenna is rotated about its vertical axis for maximum response at each azimuth about the EUT. (For certain applications, the loop antenna plane may also need to be positioned horizontally at the specified distance from the EUT)
- The final measurement is done in the position (turntable and elevation) causing the highest emissions with quasi-peak (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. A plot with the graph of the premeasurement and the limit is stored.

\*)Note: The sequence will be repeated three times with different EUT orientations.

## 7.2 Sequence of testing radiated spurious 30 MHz to 1 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) – see test details.
- EUT is set into operation.

### Premeasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position  $\pm 45^\circ$  and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

### 7.3 Sequence of testing radiated spurious 1 GHz to 18 GHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) – see test details.
- EUT is set into operation.

#### Premeasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height is 1.5 m.
- At each turntable position and antenna polarization the analyzer sweeps with positive peak detector to find the maximum of all emissions.

#### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximizes the peaks by rotating the turntable from 0° to 360°. This measurement is repeated for different EUT-table positions (0° to 150° in 30°-steps) and for both antenna polarizations.
- The final measurement is done in the position (turntable, EUT-table and antenna polarization) causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, EUT-table position, antenna polarization, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

## 7.4 Sequence of testing radiated spurious above 18 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet.
- The measurement distance is as appropriate (e.g. 0.5 m).
- The EUT is set into operation.

### Premeasurement

- The test antenna is handheld and moved carefully over the EUT to cover the EUT's whole sphere and different polarizations of the antenna.

### Final measurement

- The final measurement is performed at the position and antenna orientation causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement and the limit is stored.

## 7.5 Sequence of testing radiated spurious above 50/85 GHz with external mixers

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet.
- The measurement distance is as appropriate for far field (e.g. 0.25 m).
- The EUT is set into operation.

### Premeasurement

- The test antenna with external mixer is handheld and moved carefully over the EUT to cover the EUT's whole sphere and different polarizations of the antenna.
- Caution is taken to reduce the possible overloading of the external mixer.

### Final measurement

- The final measurement is performed at the position and antenna orientation causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- As external mixers may generate false images care is taken to ensure that any emission measured by the spectrum analyzer does indeed originate in the EUT. Signal identification feature of spectrum analyzer is used to eliminate false mixer images (i.e., it is not the fundamental emission or a harmonic falling precisely at the measured frequency).
- Final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement and the limit is stored.

## 8 Measurement uncertainty

Test case	Uncertainty
Equivalent isotropically radiated power (e.i.r.p.)	Conducted value $\pm 1$ dB Radiated value $\pm 3$ dB
Permitted range of operating frequencies	$\pm 100$ kHz
Conducted unwanted emissions in the spurious domain (up to 40 GHz)	$\pm 1$ dB
Radiated unwanted emissions in the spurious domain (up to 40 GHz)	$\pm 3$ dB
Conducted unwanted emissions in the spurious domain (40 to 50 GHz)	$\pm 4$ dB
Radiated unwanted emissions in the spurious domain (40 to 50 GHz)	$\pm 4$ dB
Conducted unwanted emissions in the spurious domain (50 to 300 GHz)	$\pm 5$ dB
Radiated unwanted emissions in the spurious domain (50 to 300 GHz)	$\pm 5$ dB
DC and low frequency voltages	$\pm 3$ %
Temperature	$\pm 1$ °C
Humidity	$\pm 3$ %

## 9 Summary of measurement results

<input checked="" type="checkbox"/>	<b>No deviations from the technical specifications were ascertained</b>
<input type="checkbox"/>	There were deviations from the technical specifications ascertained
<input checked="" type="checkbox"/>	<b>This test report is only a partial test report. The content and verdict of the performed test cases are listed below.</b>

TC Identifier	Description	Verdict	Date	Remark
RF-Testing	47 CFR Part 95 Subpart M RSS – 251 Issue 1	see below	2020-09-18	-/-

Test specification clause	Test case	Temperature conditions	Power source voltages	C	NC	NA	NP	Results (max.)
§2.1046 §95.3367 (a) / (b) RSS-251 (5.2.2)	Radiated power	Nominal	Nominal	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complies
§2.1047	Modulation characteristics	-/-	-/-	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	-/-
§2.1049 RSS-Gen	Occupied bandwidth (99% bandwidth)	Nominal	Nominal	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complies

**Note:** C = Compliant; NC = Not compliant; NA = Not applicable; NP = Not performed

**For further applied tests, please refer to the main report no. 1-2461/16-04-02-A**

### See FCC's Millimeter Wave Test Procedures:

I. A radiated method of measurements in order to demonstrate compliance with the various regulatory requirements has been chosen in consideration of test equipment availability and the limitations of many external harmonic mixers. A conducted method of measurement could be employed if EUT and mixer waveguides both are accessible and of the same type (WG number) and if waveguide sections and transitions can be found. Another potential problem is that the peak power output of devices operating under Sections 15.253 and 15.255 may exceed the +20 dBm input power limit of many commercially available mixers. For these reasons a radiated method is preferred.

## 10 Measurement results

### 10.1 Radiated power

#### Description:

The fundamental radiated emission limits within the 76-81 GHz band are expressed in terms of Equivalent Isotropically Radiated Power (EIRP) and are as shown below.

#### Measurement:

Parameters	
Detector:	RMS / Pos-Peak
Sweep time:	120 s
Resolution bandwidth:	1 MHz
Video bandwidth:	3 MHz
Trace-Mode:	Max Hold

#### Limits:

FCC §95.3367 (a) (b)

Frequency	Measurement distance	Power Density → EIRP
76.0 - 81.0 GHz	3.0 m	88 $\mu\text{W}/\text{cm}^2$ → 50 dBm (Average) 279 $\mu\text{W}/\text{cm}^2$ → 55 dBm (PEAK)

#### Limits:

RSS-251 (5.2.2)

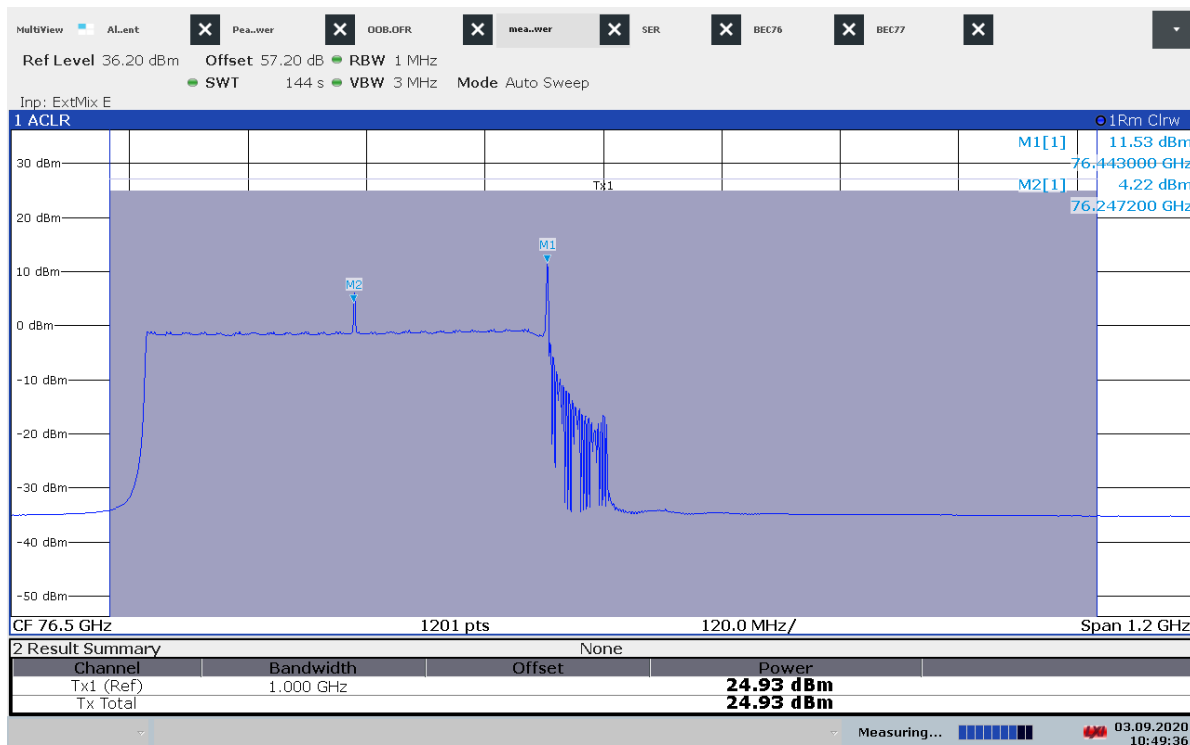

Frequency	Measurement distance	Power Density → EIRP
76.0 - 77.0 GHz	3.0 m	88 $\mu\text{W}/\text{cm}^2$ → 50 dBm (Average) 279 $\mu\text{W}/\text{cm}^2$ → 55 dBm (PEAK)

#### Measurement results:

Mode	Test conditions	Radiated peak power (eirp) [dBm]	Radiated mean power (eirp) / Channel power [dBm]
9(b)	$T_{\text{nom}} / V_{\text{nom}}$	32.8	24.9

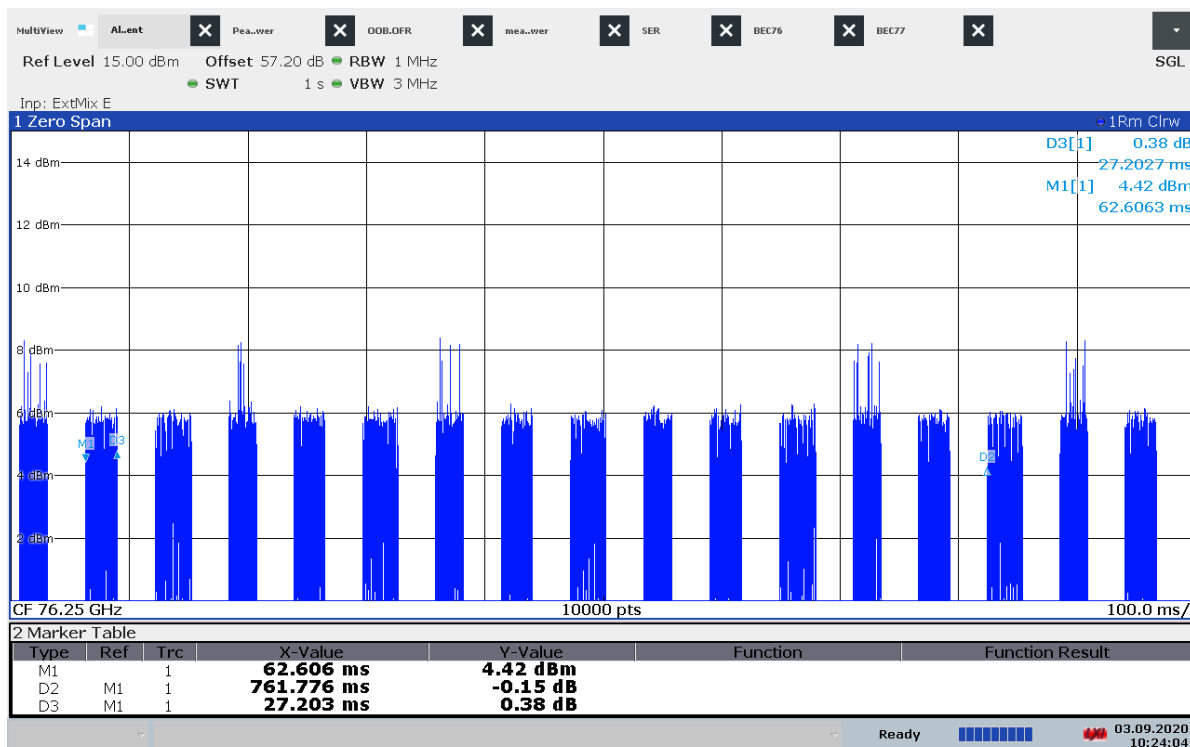

Plot 1: Mode 9(b), Radiated peak power,  $T_{nom} / V_{nom}$ 

10:23:25 03.09.2020

Plot 2: Mode 9(b), Radiated mean power,  $T_{nom} / V_{nom}$ 

10:49:36 03.09.2020

Plot 3: Mode 9(b), Time domain 76.25 GHz

10:24:04 03.09.2020

## 10.2 Occupied bandwidth

### Description:

§2.1049 The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission.

### Measurement:

Parameters	
Detector:	Pos-Peak
Sweep time:	144 s
Resolution bandwidth:	1 MHz
Video bandwidth:	3 MHz
Trace-Mode:	Max Hold
Measurement uncertainty	Span/1200

### Limits:

FCC §95.3379 (b)

Frequency range	f(lowest) > 76.0 GHz	f(highest) < 81.0 GHz
-----------------	----------------------	-----------------------

### Limits:

RSS-251 (5.2.2) / (5.4)

Frequency range	f(lowest) > 76.0 GHz	f(highest) < 77.0 GHz
-----------------	----------------------	-----------------------

### Measurement results:

Mode	Test conditions	Operating Frequency Range	
		f <sub>L</sub> [GHz]	f <sub>H</sub> [GHz]
9(b)	T <sub>nom</sub> / V <sub>nom</sub>	76.037621	76.50048

Plot 4: Mode 9(b),  $T_{\text{nom}} / V_{\text{nom}}$ 

13:19:07 14.09.2020

### 10.3 Band edge compliance

#### Description:

Investigation of the emission limits at the band edge.

#### Measurement:

Parameters	
Detector:	RMS / Pos-Peak
Sweep time:	50s
Resolution bandwidth:	1 MHz
Video bandwidth:	3 MHz
Trace-Mode:	Clear write

#### Limits:

FCC §95.3379 (a) (2) (i) + (ii) / ANSI C63.10-2013 / 6.10

Frequency Range [GHz]	Measurement distance	Power Density
40 – 200	3.0 m	600 pW/cm <sup>2</sup> → -1.7 dBm

#### Limits:

FCC §95.3379 (b)

Frequency range	f(lowest) > 76.0 GHz	f(highest) < 81.0 GHz
-----------------	----------------------	-----------------------

#### Limits:

RSS-251 (5.2.2)

Frequency range	f(lowest) > 76.0 GHz	f(highest) < 77.0 GHz
-----------------	----------------------	-----------------------

#### Measurement results:

See plots below.

Plot 5: Mode 9(b), lower BEC

10:50:45 03.09.2020

Plot 6: Mode 9(b), upper BEC

10:51:55 03.09.2020

## 10.4 Field strength of spurious emissions

### Description:

The power density of any emissions outside the 76-81 GHz band shall consist solely of spurious emissions and shall not exceed the following:

### Limits:

**FCC §95.3379 / RSS-Gen**

FCC		
CFR Part 95.3379 (a) (1) / CFR Part 95.3379 (a) (3) / RSS-Gen		
Radiated Spurious Emissions		
Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in § 15.209, whichever is the lesser attenuation.		
Frequency [MHz]	Field Strength [dBµV/m]	Measurement distance
0.009 – 0.490	2400/F[kHz]	300
0.490 – 1.705	24000/F[kHz]	30
1.705 – 30.0	30	30
30 – 88	30.0	10
88 – 216	33.5	10
216 – 960	36.0	10
960 – 40 000	54.0	3

### Limits:

**FCC §95.3379 (a) (2) (i) + (ii) / RSS-251 (5.3)**

Frequency Range [GHz]	Measurement distance	Power Density
40 – 200	3.0 m	600 pW/cm <sup>2</sup> → -1.7 dBm
200 – 231	3.0 m	1000 pW/cm <sup>2</sup> → +0.5 dBm

### Measurement results:

Frequency in GHz	Detector	Bandwidth	Level	Distance	Limit	Margin in dB
19.3578	Peak	1 MHz	47.66 dBµV	3 m	74 dBµV	29.36

Plot 7: 9 kHz to 30 MHz, Mode 9(b)

Plot 8: 30 MHz to 1 GHz, Mode 9(b)

## Final Result

Frequency (MHz)	QuasiPeak (dBµV/m)	Limit (dBµV/m)	Margin (dB)	Meas. Time (ms)	Bandwidth (kHz)	Height (cm)	Pol	Azimuth (deg)	Corr. (dB/m)
39.063	15.05	30.0	15.0	1000	120.0	200.0	V	136	13
42.039	15.92	30.0	14.1	1000	120.0	105.0	V	97	14
73.556	16.39	30.0	13.6	1000	120.0	249.0	V	312	8
123.511	16.80	33.5	16.7	1000	120.0	112.0	V	270	9
160.299	14.83	33.5	18.7	1000	120.0	100.0	V	11	9
427.896	12.71	36.0	23.3	1000	120.0	400.0	H	270	18
