Subject: Hi-G-Tek application (FCC ID: OB6-IGRS46D916)

Dear Mr. Johnson,

Please find below the answer of HI-G-Tek concerning original question #8 as written in your e-mail dated 22.08:

As was explained, we do not expect to get approval for a product with 90 degreed antenna or any other product other that was tested. The user manual covers all models and all frequencies used around the world. Thus the product that was tested is definitely with vertical antenna. It is mentioned in the user manual that the user shall not modify the antenna as supplied with the product.

Each product has a unique part number so there is no way for any misunderstanding regarding approvals for any product.

Once the IGRS46D916 is approved we will start the process of approving the different products in the family.

All the other questions refer to products other that the one that was tested.

With great respect,  
Natasha
