Report No.: JYTSZ-R12-2201964

FCC RF Test Report

Applicant: Sonoma Communications LLC

Address of Applicant: 1159 Sonora Court Suite 322, Sunnyvale CA 94086 USA

Equipment Under Test (EUT)

Product Name: 6.5" Unlocked 4G Smartphone

Model No.: Neo 1, Reno Max, Neo 2, Neo 3

Trade Mark: POZZI, RCA

FCC ID: OCVRCAPOZ23FAR

Applicable Standards: FCC CFR Title 47 Part 15C (§15.247)

Date of Sample Receipt: 05 Sep., 2022

Date of Test: 06 Sep., to 09 Oct., 2022

Date of Report Issued: 10 Oct., 2022

Test Result: PASS

Tested by: Date: 10 Oct., 2022

Reviewed by: Date: 10 Oct., 2022

Approved by: ______ Date: _____ 10 Oct., 2022

This equipment has been shown to be capable of compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in above the application standard version. Test results reported herein relate only to the item(s) tested.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

3 General Information

3.1 Client Information

| Applicant: | Sonoma Communications LLC |
|---------------|--|
| Address: | 1159 Sonora Court Suite 322, Sunnyvale CA 94086 USA |
| Manufacturer: | United Creation Technology Corp., Ltd |
| Address: | Room 105, Shenzhen Integrated Circuit Design and Application Industrial Park, 1089 Chaguang Road, Nanshan District, shenzhen |
| Factory: | Huizhou Jiashang Electronic Technology Co., LTD |
| Address: | Tangquan Qiaoxing Science and Technology Industrial Park, Huizhou City, Guangdong Province |

3.2 General Description of E.U.T.

| CIZ COMOTAL BOCOM | |
|------------------------|---|
| Product Name: | 6.5" Unlocked 4G Smartphone |
| Model No.: | Neo 1, Reno Max, Neo 2, Neo 3 |
| Operation Frequency: | 2402 MHz - 2480 MHz |
| Channel Numbers: | 40 |
| Channel Separation: | 2MHz |
| Modulation Technology: | GFSK |
| Data Speed: | 1 Mbps (LE 1M PHY) |
| Antenna Type: | Internal Antenna |
| Antenna Gain: | 0.74dBi (declare by applicant) |
| Antenna transmit mode: | SISO (1TX, 1RX) |
| Power Supply: | Rechargeable Li-ion Battery DC3.85V, 4000mAh |
| AC Adapter: | Model: Reno Max |
| | Input: AC100-240V, 50/60Hz, 0.35A |
| | Output: DC 5.0V, 2.0 A |
| Remark: | Model No.: RENO Max, Neo 1, Neo 2, and Neo 3, were identical inside, the electrical circuit design, layout, components used and internal wiring, with only difference being model name and for different areas. |
| Test Sample Condition: | The test samples were provided in good working order with no visible defects. |

Report No.: JYTSZ-R12-2201964

3.3 Test Mode and Test Environment

| Test Mode: | | | | |
|-------------------------------|---|--|--|--|
| Transmitting mode | Keep the EUT in continuous transmitting with modulation | | | |
| Remark: For AC power line con | ducted emission and radiated spurious emission (below 1GHz), pre-scan all data speed, | | | |
| found 1 Mbps (LE 1M PHY) was | worse case mode. The report only reflects the test data of worst mode. | | | |
| Operating Environment: | Operating Environment: | | | |
| Temperature: | 15℃ ~ 35℃ | | | |
| Humidity: | 20 % ~ 75 % RH | | | |
| Atmospheric Pressure: | 1008 mbar | | | |

3.4 Description of Test Auxiliary Equipment

The EUT has been tested as an independent unit.

3.5 Measurement Uncertainty

| Parameter | Expanded Uncertainty (Confidence of 95%(U = 2Uc(y))) |
|--|--|
| Conducted Emission for LISN (9kHz ~ 150kHz) | ±3.11 dB |
| Conducted Emission for LISN (150kHz ~ 30MHz) | ±2.62 dB |
| Radiated Emission (30MHz ~ 1GHz) (3m SAC) | ±4.45 dB |
| Radiated Emission (1GHz ~ 18GHz) (3m SAC) | ±5.34 dB |
| Radiated Emission (18GHz ~ 40GHz) (3m SAC) | ±5.34 dB |
| Radiated Emission (30MHz ~ 1GHz) (10m SAC) | ±4.32 dB |

Note: All the measurement uncertainty value were shown with a coverage k=2 to indicate 95% level of confidence. The measurement data show herein meets or exceeds the CISPR measurement uncertainty values specified in CISPR 16-4-2 and can be compared directly to specified limit to determine compliance.

3.6 Additions to, Deviations, or Exclusions from the Method

No

3.7 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Designation No.: CN1211

JianYan Testing Group Shenzhen Co., Ltd. has been accredited as a testing laboratory by FCC(Federal Communications Commission). The test firm Registration No. is 727551.

■ ISED – CAB identifier.: CN0021

The 3m Semi-anechoic chamber and 10m Semi-anechoic chamber of JianYan Testing Group Shenzhen Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

• CNAS - Registration No.: CNAS L15527

JianYan Testing Group Shenzhen Co., Ltd. is accredited to ISO/IEC 17025:2017 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L15527.

A2LA - Registration No.: 4346.01

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 General requirements for the competence of testing and calibration laboratories. The test scope can be found as below link: https://portal.a2la.org/scopepdf/4346-01.pdf

3.8 Laboratory Location

JianYan Testing Group Shenzhen Co., Ltd.

Address: No.101, Building 8, Innovation Wisdom Port, No.155 Hongtian Road, Huangpu Community, Xingiao Street, Bao'an District, Shenzhen, Guangdong, People's Republic of China.

4 Measurement Setup and Procedure

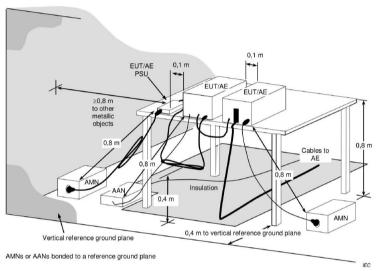

4.1 Test Channel

According to ANSI C63.10-2013 chapter 5.6.1 Table 4 requirement, select lowest channel, middle channel, and highest channel in the frequency range in which device operates for testing. The detailed frequency points are as follows:

| Lowest channel | | Middle channel | | Highest channel | |
|----------------|--------------------|----------------|--------------------|-----------------|--------------------|
| Channel No. | Frequency (MHz) | Channel No. | Frequency (MHz) | Channel No. | Frequency (MHz) |
| 0 | 2402 | 20 | 2442 | 39 | 2480 |

4.2 Test Setup

1) Conducted emission measurement:

Note: The 0.8 m distance specified between EUT/AE/PSU and AMN/AAN, is applicable only to the EUT being measured. If the device is AE then it shall be >0.8 m.

2) Radiated emission measurement:

Below 1GHz (10m SAC)

4.3 Test Procedure

| Test method | Test step |
|-----------------------|--|
| Conducted emission | The E.U.T and simulators are connected to the main power through a line |
| Conducted emission | impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH |
| | coupling impedance for the measuring equipment. |
| | The peripheral devices are also connected to the main power through a LISN |
| | that provides a 50ohm/50uH coupling impedance with 50ohm termination. |
| | (Please refer to the block diagram of the test setup and photographs). |
| | 3. Both sides of A.C. line are checked for maximum conducted interference. In |
| | order to find the maximum emission, the relative positions of equipment and |
| | all of the interface cables must be changed according to ANSI C63.10 on |
| | conducted measurement. |
| Radiated emission | For below 1GHz: |
| | 1. The EUT was placed on the tabletop of a rotating table 0.8 m the ground at a |
| | 10 m semi anechoic chamber. The measurement distance from the EUT to the receiving antenna is 10 m. |
| | 2. EUT works in each mode of operation that needs to be tested, and having |
| | the EUT continuously working, respectively on 3 axis (X, Y & Z) and |
| | considered typical configuration to obtain worst position. The highest signal |
| | levels relative to the limit shall be determined by rotating the EUT from 0° to |
| | 360° and with varying the measurement antenna height between 1 m and 4 |
| | m in vertical and horizontal polarizations. |
| | 3. Open the test software to control the test antenna and test turntable. Perform the test, save the test results, and export the test data. |
| | For above 1GHz: |
| | 1. The EUT was placed on the tabletop of a rotating table 1.5 m the ground at a |
| | 3 m fully anechoic room. The measurement distance from the EUT to the |
| | receiving antenna is 3 m. |
| | 2. EUT works in each mode of operation that needs to be tested, and having |
| | the EUT continuously working, respectively on 3 axis (X, Y & Z) and |
| | considered typical configuration to obtain worst position. The highest signal |
| | levels relative to the limit shall be determined by rotating the EUT from 0° to |
| | 360° and with varying the measurement antenna height between 1 m and 4 |
| | m in vertical and horizontal polarizations. 3. Open the test software to control the test antenna and test turntable. Perform |
| | the test, save the test results, and export the test data. |
| Conducted test method | The BLE antenna port of EUT was connected to the test port of the test |
| | system through an RF cable. |
| | The EUT is keeping in continuous transmission mode and tested in all |
| | modulation modes. |
| | 3. Open the test software, prepare a test plan, and control the system through |
| | the software. After the test is completed, the test report is exported through |
| | the test software. |

5 Test Results

5.1 Summary

5.1.1 Clause and Data Summary

| Test items | Standard clause | Test data | Result |
|---|-------------------------|-----------------------|--------|
| Antenna Requirement | 15.203 15.247 (b)(4) | See Section 5.2 | Pass |
| AC Power Line Conducted Emission | 15.207 | See Section 5.3 | Pass |
| Conducted Output Power | 15.247 (b)(3) | Appendix – BLE 1M PHY | Pass |
| 6dB Emission Bandwidth 99% Occupied Bandwidth | 15.247 (a)(2) | Appendix – BLE 1M PHY | Pass |
| Power Spectral Density | 15.247 (e) | Appendix – BLE 1M PHY | Pass |
| Band-edge Emission Conduction Spurious Emission | 15.247 (d) | Appendix – BLE 1M PHY | Pass |
| Emissions in Restricted Frequency Bands | 15.205 15.247 (d) | See Section 5.4 | Pass |
| Emissions in Non-restricted Frequency Bands | 15.209 15.247(d) | See Section 5.5 | Pass |

Remark:

- 1. Pass: The EUT complies with the essential requirements in the standard.
- 2. N/A: Not Applicable.
- 3. The cable insertion loss used by "RF Output Power" and other conduction measurement items is 0.5dB (provided by the customer).

Test Method: ANSI C63.10-2013 KDB 558074 D01 15.247 Meas Guidance v05r02

5.1.2 Test Limit

| Test items | Limit | | | | | | | |
|---|--|--|--|--|--|----------------------|--|--|
| | | Frequency | | Limit (d | dΒμV) | | | |
| | | (MHz) | Quas | i-Peak | Average | | | |
| AC Power Line Conducted | | 0.15 – 0.5 | 66 to | 56 Note 1 | 56 to 46 Note 1 | | | |
| Emission | | 0.5 – 5 | | 56 | 46 | | | |
| | | 5 – 30 | | 30 | 50 | | | |
| | | Note 1: The limit level in dBμV decreases linearly with the logarithm of frequency. Note 2: The more stringent limit applies at transition frequencies. | | | | | | |
| Conducted Output Power | | systems using digital me I 5725-5850 MHz bands: | | the 902-928 | MHz, 2400-2483.5 MH | lz, | | |
| 6dB Emission Bandwidth | The | e minimum 6 dB bandwic | Ith shall be a | it least 500 k | Hz. | | | |
| 99% Occupied Bandwidth | N/A | 1 | | | | | | |
| Power Spectral Density | inte | digitally modulated system entional radiator to the areal during any time interva | ıtenna shall ı | not be greate | er than 8 dBm in any 3 | | | |
| Band-edge Emission Conduction Spurious Emission | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply | | | | | | | |

Report No.: JYTSZ-R12-2201964

5.2 Antenna requirement

Standard requirement: FCC Part 15 C Section 15.203 /247(b)(4)

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(b) (4) requirement:

(4) The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

E.U.T Antenna:

The BLE antenna is an Internal antenna which cannot replace by end-user, the best case gain of the antenna is 0.74 dBi. See product internal photos for details.
