

## **Certification Exhibit**

## FCC ID: ODB-LANCER450044

### FCC Rule Part: 15.247

## ACS Project Number: 12-2168

Manufacturer: ValidFill, LLC Model: HD011SA003

# **RF Exposure**

#### **General Information:**

| Applicant:       | ValidFill, LLC                           |
|------------------|--|
| ACS Project:     | 12-2168                                  |
| Device Category: | Mobile                                   |
| Environment:     | General Population/Uncontrolled Exposure |

#### **Technical Information:**

Antenna Type:PCB Loop AntennaAntenna Gain:0.55 dBiMaximum Transmitter Conducted Power:18.53 dBm, 71.29 mWMaximum System EIRP:19.08 dBm, 80.91 mWExposure Conditions:Greater than 20 centimeters

#### **MPE Calculation**

The Power Density (mW/cm<sup>2</sup>) is calculated as follows:

$$S = \frac{PG}{4\pi R^2}$$

Where:

S = power density (in appropriate units, e.g. mW/cm2)

P = power input to the antenna (in appropriate units, e.g., mW)

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm)

| MPE Calculator for Mobile Equipment                  |       |               |       |         |          |                        |                |  |

| 900  | 18.53 | 0.60          | 71.29 | 0.55    | 1.135    | 20                     | 0.016          |  |

#### **Installation Guidelines**

The installation manual should contain text similar to the following advising how to install the equipment to maintain compliance with the FCC RF exposure requirements:

#### RF Exposure

In accordance with FCC requirements of human exposure to radio frequency fields, the radiating element shall be installed such that a minimum separation distance of 20 centimeters will be maintained.

### **Conclusion**

This device complies with the MPE requirements by providing adequate separation between the device, any radiating structure and the general population.
