RE: ATCB005505

FCC ID: ODMWS12G

I have a few comments on this application. Depending on your responses, kindly understand there may be additional comments.

1. The peak level of radiated bandedge emission at 2390MHz frequency point (page 35, 39) and at 2483.5MHz (page 37,40,41) is higher than average limit. It is necessary to provide the average measurement (RBW=1MHz, VBW=10Hz) for these frequency points to show their average emission level is lower than average limit. Please provide us an updated test report.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
