

# **FCC** Report

Product Name : TLSR8258MRC32D

Trade mark : N/A

Model No. : TLSR8258MRC32D

FCC ID : OEOTLSR8258MRC32D

Report Number : BLA-EMC-201904-A53-01

Date of sample receipt : April 23, 2019

**Date of Test** : April 23, 2019–April 28, 2019

Date of Issue : April 30, 2019

Test standard : FCC CFR Title 47 Part 15 Subpart C Section 15.247

Test result : PASS

# Prepared for:

Telink Semiconductor (Shanghai) Co., Ltd.
Bldg 3, No.1500, Zuchongzhi Rd, Zhangjiang Hi-Tech Park, Shanghai
201203, China

#### Prepared by:

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd.

# 4 Test Summary

| Test Item                        | Section in CFR 47 | Result |
|----------------------------------|-------------------|--------|
| Antenna requirement              | 15.203/15.247 (c) | Pass   |
| AC Power Line Conducted Emission | 15.207            | N/A    |
| Conducted Output Power           | 15.247 (b)(3)     | Pass   |
| Channel Bandwidth                | 15.247 (a)(2)     | Pass   |
| Power Spectral Density           | 15.247 (e)        | Pass   |
| Band Edge                        | 15.247(d)         | Pass   |
| Spurious Emission                | 15.205/15.209     | Pass   |

Pass: The EUT complies with the essential requirements in the standard.

Remark: Test according to ANSI C63.10:2013.

#### **Measurement Uncertainty**

| -   |                 |                         |       |  |  |  |
|---|-----------------|-------------------------|-------|--|--|--|
| Test Item   | Frequency Range | Measurement Uncertainty | Notes |  |  |  |
| Radiated Emission   | 9kHz ~ 30MHz    | ± 4.34dB                | (1)   |  |  |  |
| Radiated Emission   | 30MHz ~ 1000MHz | ± 4.24dB                | (1)   |  |  |  |
| Radiated Emission   | 1GHz ~ 26.5GHz  | ± 4.68dB                | (1)   |  |  |  |
| AC Power Line Conducted<br>Emission   | 0.15MHz ~ 30MHz | ± 3.45dB                | (1)   |  |  |  |
| Note (1): The measurement uncertainty is for coverage factor of k=2 and a level of confidence of 95%. |                 |                         |       |  |  |  |

#### Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel             | Frequency |
|---------------------|-----------|
| The lowest channel  | 2402MHz   |
| The middle channel  | 2442MHz   |
| The Highest channel | 2480MHz   |

Report No.: BLA-EMC-201904-A53-01 Page 7 of 37

#### 5.2 Test mode

Transmitting mode Keep the EUT in continuously transmitting mode.

Remark: During the test, New battery is used during all test.

#### 5.3 Description of Support Units

| Manufacturer | cturer Description |       | Serial Number |
|--------------|--------------------|-------|---------------|
| Lenovo       | Notebook computer  | E470C | PF-10FB5C     |

## 5.4 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • FCC — Designation No.: CN1252

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Designation CN1252.

#### •ISED — CAB identifier No.: CN0028

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd has been registered by Certification and Engineering Bureau of ISED for radio equipment testing with CAB identifier CN0028

#### 5.5 Test Location

All tests were performed at:

All tests were performed at:

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd.

IOT Test Centre of BlueAsia

No. 448 Bulong Road, Bantian Street, Longgang District, Shenzhen, China

Telephone: TEL: +86-755-28682673 FAX: +86-755-28682673

No tests were sub-contracted.

# 7 Test results and Measurement Data

## 7.1 Antenna requirement

Standard requirement: FCC Part15 C Section 15.203 /247(c)

#### 15.203 requirement:

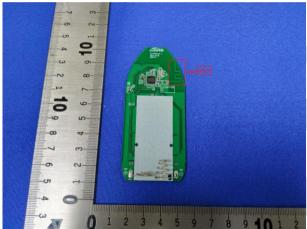

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

#### E.U.T Antenna:

The antenna is PCB antenna, the best case gain of the antenna is 0.0dBi

Report No.: BLA-EMC-201904-A53-01 Page 11 of 37

# 7.2 Conducted Emissions

|                       | Above 1   | CH-             | 54.0         | 0      | Average |  |
|                       | Above i   | GHZ             | 74.0         | 0      | Peak    |  |
|                       | Tum Table < Im 4m > v   |                 |              |        |         |  |
| Test Procedure:       | 1. The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.  2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.  3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.  4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.  5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.  6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.  7. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, only the test worst case mode is recorded in the report. |                 |              |        |         |  |
| Test Instruments:     | Refer to section  |                 |              |        |         |  |
| Test mode:            | Refer to section  | 5.2 for details | }            |        |         |  |
| Test results:         | Pass  |                 |              |        |         |  |

Measurement data:

Remark: The pre-test were performed on lowest, middle and highest frequencies, only the worst case's (lowest and highest frequencies) data was showed.

|                            | measurement.   |   |
|                            | 4. For each suspected emission, the EUT was ar<br>and then the antenna was tuned to heights fror<br>and the rota table was turned from 0 degrees t<br>maximum reading.   | m 1 meter to 4 meters   |
|                            | <ol><li>The test-receiver system was set to Peak Dete<br/>Bandwidth with Maximum Hold Mode.</li></ol>  | ect Function and Specified  |
|                            | 6. If the emission level of the EUT in peak mode in limit specified, then testing could be stopped at EUT would be reported. Otherwise the emission margin would be re-tested one by one using peaverage method as specified and then reported | nd the peak values of the<br>ons that did not have 10dB<br>eak, quasi-peak or |
| Test Instruments:          | Refer to section 6.0 for details   |   |
| Test mode:                 | Refer to section 5.2 for details   |   |
| Test results:              | Pass   |   |

#### Remark:

Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.

#### **Measurement Data**

#### 9 kHz ~ 30 MHz

The low frequency, which started from 9 kHz to 30 MHz, was pre-scanned and the result which was 20 dB lower than the limit line per 15.31(o) was not reported.
