

Questions: The 731 form shows an output rating of 2 watts which is assumed to be peak - please clarify. This power rating needs to be adjusted in order to match those in the EMC measurement and SAR evaluations. There is also no emission designator shown - please clarify.

Answers: The 2 watts referred to on the 731 form is average, i.e. **2 watts average**.  
The emission designator is **W7W**
