AUTOMATIC CHANNEL SELECTION 47 CFR §15.247 (h)

The 9520 cordless telephone was tested for Automatic Channel Selection. The test configuration below was utilized to test the 9520 for occupied channel avoidance.

The signal generator was set at each handset and base carrier frequency. Each carrier was tested for avoidance the results were monitored on a spectrum analyzer. The 9520 base and handset automatically avoided the occupied frequencies generated by the signal generator. Also the 9520 only works with one transmitter at the time.
