**RE: #18) Tune-up procedure over power range or at specific operating levels.**

To Whom It May Concern:

This is to affirm that the MMCT – Multi-Channel, Multi-Frequency Transmitter is factory tuned and aligned.  
The user in-the-field cannot adjust the power of the component.

Please contact me if there is any information you may need.

Sincerely,

A handwritten signature in black ink, which appears to read "Thomas F. Kotch". The signature is fluid and cursive.
