### **1 General Information**

#### **1.1 General Description**

The equipment under test (EUT) is a transmitter for R/C Cross Country Series. It operates at 49.860MHz which is controlled by a crystal. The EUT is powered by 2 x 1.5V AA size batteries. There are two control sticks in the EUT. When the forward, backward, turn left, and turn right stick is pushed once, it will transmit different radio control signal to receiver.

The brief circuit description is listed as follows:

- U1 and associated circuit act as encoder.
- Q2, X1 and associated circuit act as oscillator.
- Q1 and associated circuit act as RF amplify.

## **TEST REPORT**

Report No. : AG033149-001

Date : 2007 January 05

### **2 Description of the radiated emission test**

#### **2.1 Test Procedure**

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement.

#### **2.2 Test Result**

Peak Detector data was measured unless otherwise stated.

# Emissions appearing within the restricted bands shall follow the requirement of section 15.205.

It was found that the EUT meet the FCC requirement.

### **3 Description of the Line-conducted Test**

#### **3.1 Test Procedure**

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. The EUT was setup as described in the procedures, and both lines were measured.

#### **3.2 Test Result**

No measurement is required as the EUT is a battery-operated product.

#### **3.3 Graph and Table of Conducted Emission Measurement Data**

Date : 2007 January 05

### **5 Supplementary document**

The following document were submitted by applicant, and for electronic filing, the document are saved with the following filenames:

<b>Document</b>	<b>Filename</b>
ID Label/Location	LabelSmp.jpg
Block Diagram	BlkDia.pdf
Schematic Diagram	Schem.pdf
Users Manual	UserMan.pdf
Operational Description	OpDes.pdf

#### **5.1 Bandwidth**

The plot saved in TestRpt2.pdf shows the fundamental emission is confined in the specified band. The field strength of any emission appearing between the band edges and up to 10kHz above and below the band edges (49.81 and 49.91MHz) is at least 26dB below the carrier level. It meets the requirement of Section 15.235(b).

#### **5.2 Duty cycle**

The duty cycle is simply the on-time divided by the period:

$$\text{The duration of one cycle} = 58.1\text{ms}$$

$$\begin{aligned}\text{Effective period of the cycle} &= (1.45 \times 4)\text{ms} + (0.48 \times 52)\text{ms} \\ &= 30.76\text{ms}\end{aligned}$$

$$\begin{aligned}\text{Duty Cycle} &= 30.76 / 58.1 \\ &= 0.529\end{aligned}$$

Therefore, the average factor is found by  $20 \log_{10} 0.529 = -5.5\text{dB}$

#### **5.3 Transmission Time**

N/A
