

Operation Description for R/C Hummer H3

The R/C Hummer H3 is powered by 1 x 9V size battery for Transmitter. The radio control channel is 49.860MHz. There are two control sticks in the front of transmitter. When it switched “On” and pressed the stick once, the encoder IC1 will generate a control signal to receiver. The crystal Y1 and transistor Q1 is responsible to generate a radio frequency 49.860MHz and combined with control signal to transistor Q2.
