I, the undersigned, hereby declare that the equipment tested and referenced in this report conforms to the identified standard(s) as described in this test report. No modifications were made to the equipment during testing in order to achieve compliance with these standards. Furthermore, there was no deviation from, additions to, or exclusions from, the applicable parts of FCC Part 2, FCC Part 15, Industry Canada RSS-210, and ANSI C63.10.

1 General Information

1.1 Scope

This is a FCC/IC original application report.

Applicable Standards:

- FCC Rules Part 15.231: Periodic operation in the band 40.66–40.70 MHz and above 70 MHz (15.231(e) limits)
- Industry Canada RSS-210: Low Power License-Exempt Communications Devices

1.2 Description of EUT

Model	OHT4882056
Power Supply	Internal 3 VDC Cell (CR2450)
Frequency Range	433.92 MHz
Antenna Type	Internal PCB Trace

1.3 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located at 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170.

1.4 Related Submittal(s)/Grant(s)

This is an original application of a transmitter for Strattec Security Corp., Model: OHT4882056, FCC ID: OHT4882056, IC: 5461A-4882056.

2 Test Information

2.1 Description of Test Modes

In accordance with FCC 15.31(m), and because the EUT utilizes an operating band of one frequency, the following frequency was tested.

Table 2-1: Channels Tested

Frequency
433.92

2.2 Exercising the EUT

The EUT was supplied with test firmware programmed to transmit continuously, as well as in an original configuration for bandwidth and timing tests. The EUT was tested in all three orthogonal planes in order to determine worst-case emissions. There were no deviations from the test standard(s) and/or methods. The test results reported relate only to the item tested.

2.3 Test Result Summary

Table 2-2: Test Result Summary – FCC 15.231, IC RSS-210 Annex A

FCC Reference	IC RSS-210 Reference	Test	Pass/Fail or N/A
15.209	4.1	Radiated Emissions	Pass
15.231(e)	A.1.4	Maximum Peak Power Output	Pass
15.231(c)	A.1.3	Bandwidth	Pass
15.231(a)(1)	A.1.1	5 second release	Pass

2.4 Test System Details

The test samples were received on June 29, 2017. The FCC identifiers for all applicable equipment, plus descriptions of all cables used in the tested system, are identified in the following table.

Table 2-3: Equipment Under Test

Part	Manufacturer	Model	Serial Number	FCC ID	Cable Description	RTL Bar Code
Keyfob Silver Side, 3 button	Strattec Security Corp.	OHT4882056	N/A	OHT4882056	N/A	22544
Keyfob Black Side, 3 button	Strattec Security Corp.	OHT4882056	N/A	OHT4882056	N/A	22545
Keyfob Silver Side, 5 button	Strattec Security Corp.	OHT4882056	N/A	OHT4882056	N/A	22548
Keyfob Black Side, 5 button	Strattec Security Corp.	OHT4882056	N/A	OHT4882056	N/A	22547
Keyfob Black Side, 3 button, normal operation	Strattec Security Corp.	OHT4882056	N/A	OHT4882056	N/A	22546

2.5 Configuration of Tested System

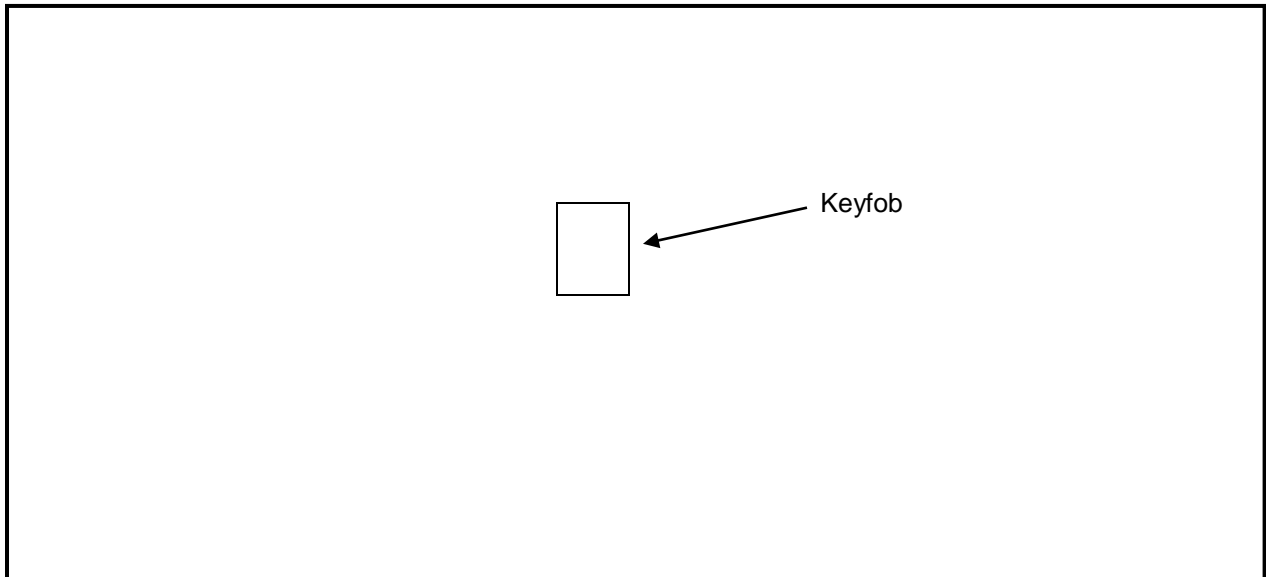

Figure 2-1: Configuration of System Under Test

3 Bandwidth – FCC 15.231(c); IC RSS-210 A1.3

3.1 Bandwidth Test Procedure

The minimum 20 dB bandwidth (99% for ISED) was measured using a 50 ohm spectrum analyzer. The carrier was adjusted on the analyzer so that it was displayed entirely on the spectrum analyzer. The analyzer went through several sweeps with the max hold function used in peak detector mode. The resolution bandwidth was set to 30 kHz, and the video bandwidth set > 3X RBW. The minimum bandwidth was measured using the spectrum analyzer marker delta function. The plots on the following pages contain the bandwidth measurement results.

4 Duty Cycle Calculation

4.1 Duty Cycle Test Procedure

Using a zero span, the sweep time was set to 100 ms. Pulses were measured triggered with the IF power for 8000 points. The amplitudes were summed, less space between, from an ASCII output of the analyzer to a spreadsheet where the result was found to be 0.024938 seconds.

Table 4-1: Duty Cycle Test Equipment

RTL Asset #	Manufacturer	Model	Part Type	Serial Number	Calibration Due Date
901581	Rohde & Schwarz	FSU	Spectrum Analyzer	1166.1660.50	3/22/18

5 Radiated Emissions Test Results - FCC Part 15.231(e); IC RSS-210 A.1.4

5.1 Limits of Radiated Emissions Measurement

Fundamental Frequency (MHz)	Field Strength of Fundamental (microvolts/meter)	Field Strength of Spurious Emission (microvolts/meter)
40.66-40.70	1000	100
70-130	500	50
130-174	500 to 1500 ¹	50 to 150 ¹
174-260	1500	150
260-470	1500 to 5000 ¹	150 to 500 ¹
Above 470	5000	500

¹Linear interpolations

5.2 Radiated Emissions Measurement Test Procedure

Before final measurements of radiated emissions were made on the open-field three/ten meter range, the EUT was scanned indoors at one and three meter distances. This was done in order to determine its emissions spectrum signature. The physical arrangement of the test system and associated cabling was varied in order to determine the effect on the EUT's emissions in amplitude, direction and frequency. This process was repeated during final radiated emissions measurements on the open-field range, at each frequency, in order to ensure that maximum emission amplitudes were attained.

Final radiated emissions measurements were made on the three/ten-meter, open-field test site. The EUT was placed on a nonconductive turntable 0.8 meters above the ground plane. The spectrum was examined from 9 kHz to the 10th harmonic of the highest fundamental transmitter frequency (4.3 GHz).

At each frequency, the EUT was rotated 360°, and the antenna was raised and lowered from 1 to 4 meters in order to determine the emission's maximum level. Measurements were taken using both horizontal and vertical antenna polarizations. For frequencies between 30 and 1000 MHz, the spectrum analyzer's 6 dB bandwidth was set to 120 kHz, and the analyzer was operated in the CISPR quasi-peak detection mode. For emissions above 1000 MHz, emissions are measured using the average detector function with a minimum resolution bandwidth of 1 MHz. No video filter less than 10 times the resolution bandwidth was used. The highest emission amplitudes relative to the appropriate limit were measured and recorded in this report.

The fundamental field strength of each type with a key inserted and removed were measured and the worst case spurious emissions reported.

Table 5-1: Radiated Emissions Test Equipment

RTL Asset #	Manufacturer	Model	Part Type	Serial Number	Calibration Due Date

6 Five second Timing Test – FCC 15.231(a)(1); IC RSS-210 A1.1(a)

FCC 15.231(a)(1); A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

IC RSS-210 A1.1(a); A manually operated transmitter shall be equipped with a push-to-operate switch and be (a) under manual control at all times during transmission. When released, the transmitter shall cease transmission within no more than 5 seconds of being released.

7 Conclusion

The data in this measurement report shows that the EUT as tested, Strattec Security Corp., Model: OHT4882056, FCC ID: OHT4882056, IC: 5461A-4882056, complies with the applicable requirements of Parts 2 and 15 of the FCC Rules and Regulations, and Industry Canada RSS-210 and RSS-Gen.
