RE: Kai-Link Corporation

FCC ID: OIBKWL-210

I have a few comments on this Application.

- 1.) Please provide a sample of the Label for this device.
- 2.) Please include the two-part label statement as described in 47CFR 15.19(a)(3) on the device.
- 3.) Please provide Information to User as described in 15.21 within the manual.
- 4.) The RF Exposure report quotes a safe MPE distance of 20cm. This is not appropriate for PCMCIA cards with built in integral antennas. Please note the correct MPE distance should be 2.5cm. Since the RF Exposure Evaluation is included inside the Test Report, please be sure to also correct this also.
- 5.) There is no RF Exposure information included in Manual. Please correct manual to show MPE distance and prohibition from co-location.
- 6.) Form 731 shows an upper frequency range of 2463MHz. With your permission, this will be changed to the standard 802.11 Ch. 11 frequency of 2462MHz.
- 7.) FYI: The FCC has eliminated the Processing Gain requirement for all 15.247 Spread Spectrum devices. A copy of this notice is attached to this email.
- 8.) Was the equipment rotated about three orthogonal planes for finding of maximum radiated emissions as required in ANSI C63.4?
- 9.) The Confidentiality Request covers only the Schematics. Please confirm that the Block Diagram is not considered Confidential by the Applicant as well.
- 10.) There is no radiated data showing compliance with the restricted bands provision of 15.205 especially the band below 2390MHz, and above 2483.5MHz. Both peak and average readings should be shown.

I look forward to your response.

Sincerely,

William H. Graff
President and Examining Engineer
